

Sneha Aghor

Senior Business Analyst

Email: snehakaghor@gmail.com

Contact: 214-885-3452

Visa Status: H4EAD (No Sponsorship required)

Professional Summary:

- Adept knowledge about all the stages in a Software Development Life Cycle (SDLC) including the deliverables at all the stages: proficient with industry-standard methodologies like Waterfall, Agile, Scrum, Waterfall – Scrum Hybrid.
- **Senior Business analyst with over 14+ years** of proven experience in the **Life Science, Healthcare, Healthcare payer, e-commerce, Insurance and Pharmaceutical Industries.**
- Exceptional knowledge of Epic Build, Epic Clinical Workflows, Epic Implementation, Epic Tapestry, Mega Systems, Revenue Cycle, Provider, Professional, Facility, COB, Medicare/Medicaid Claims, HL7 Interface Messages, HL7, FHIR, ICD, CPT, Health rules payer Claims, Medical Necessity, Dual Coding, TA1, 999 820 EDI Transactions, EOB, EOP, Claim Adjudication, FACETS & NASCO User Interface.
- Functional Architect & Senior Business Analyst with 14+ years of experience in Oracle Applications and enterprise solutions, specializing in Oracle Fusion Product Lifecycle Management (PLM) Cloud.
- Proven track record in leading **discovery workshops**, gathering and analyzing **PLM-related business requirements** (Item, BOM, Change Management, PDH), and delivering **robust Oracle Fusion PLM Cloud solutions.**
- Adept at translating business needs into **functional designs**, configuring Oracle Cloud applications, and guiding technical teams through **implementation, UAT, and go-live.**
- Recognized for client engagement, strategic advisory, and pre-sales support; served as a trusted advisor for global clients in Life Sciences, Healthcare, and Manufacturing.
- Experience with various Business Analysis tools like Optimal Trace, Doors, Blueprint, content Management suites (MS SharePoint), and CRM applications.
- Having extensive domain knowledge in MMIS, EPIC, EDI X12, HL7, FHIR, ICD, CPT, HIPAA, System, MITA, Medicare, Medicaid, and CMS Compliances/Regulations.
- Experience in HP, ALM tool to resolve UAT defects. Identified medical coding (ICD-9/10 gaps, CPT) Utilizing Rally Agile and Scrum Life Cycle Management tool for system configuration and updates. Experience in benefit configuration, claims processing, unit, UAT on NASCO, Q-Blue (QMACS), MCS, QNXT, FACETS, ITS, QCARE, Meta Vance, Epic/Tapestry, and legacy systems. Adjudicated in EEC. Used HRBK in Nasco to make updates to the Benefit File. Used the RBRVS (Resource-Based Relative Value Scale) for Benefit codes for group plans under Medicare.
- Extensive knowledge in Data Warehousing architecture, implementation approaches, schemas, and dimensional modeling, Seasoned in Creating Data Models, such as Conceptual models and Logical models.
- Analyzed the existing reports of the reporting system in the database. Checked the consistency of the data after the ETL process using SQL queries.
- Experience with business process integration across systems, platforms & application migrations for Salesforce CRM application.
- Worked on Clinical Business Process Management, trial analysis, design, development, testing, and implementation.
- Strong experience in Business and Data Analysis, Data Profiling, Data Migration, Data Cataloging, Data Lineage Tracking, Data Integration, and Metadata Management Services.
- Extensively used Microsoft Power BI Desktop for the data modeling process and create various visualizations.
- Worked on the conversion of Business Intelligence reports from Business Objects, Excel into Tableau and Power BI visualizations and trained the Business users. Worked on SSRS and SSIS reporting and ETL tools.
- Analyzing the test scripts provided by the End client and finding the Gaps against the test cases.
- Provide technical support for Audio/Video/Web conferences with IP integration.
- Functional experience in Claim Life Cycle and Health Care Payer domain process along with various lines of health insurance systems like PPO, HMO, POS.
- Participated in functional design sessions, creates, and executes SQL test scripts, and aids in the solution of data issues.

- Worked extensively with developing a business rules engine enabling the business rules such as referral, prior authorization, eligibility, claims processing, and billing essential and blue card.
- Ability in a broad range of technologies, including **Python**, MS Office (Word, Access, PowerPoint, Excel, and Visio), MS Project, and MS Visio.

Professional Experience

Common Health Cabinet, KY (REMOTE)

Sep 2023 – Present

Senior Business Analyst

The project involved supporting the MCAFS project at Cabinet of health services, Kentucky. I was tasked with Deliverables, acting as a functional lead for Provider functional space to support the migration project for Medicaid/Medicare application at CHFS. Led the requirements gathering workshop for one NPI to one Medicaid id initiative at MCAFS.

Roles & Responsibilities:

- Facilitated requirement workshops, one-on-one interview sessions, group sessions, joint application development sessions (JAD), Customer Relationship Management (CRM) , Enterprise Resource Planning (ERP), and prototyping sessions to come up with business and technical requirements.
- Handled programing for inbound and outbound files for data exchange, automation, and integration between different software systems for different data structure sets.
- Defined **functional and technical requirements** for enterprise applications with focus on **PLM/ERP data integration**.
- Collaborated on multiple **ERP implementation and enhancement projects** (Agility, Microsoft Dynamics 365, and Epicor P21) to streamline finance, supply chain, and product lifecycle workflows .
- Collaborated with Oracle and Salesforce teams for system configuration, data migration, and integration strategies.
- Acted as **functional lead** in design sessions, prepared **solution design documents (SDD)**, and validated deliverables with business stakeholders.
- Partnered with Supply Chain, Manufacturing, Quality, Finance, and Technology teams to manage the complete SAP Product and Quality Master Data lifecycle (design, create, deploy, optimize, audit, and retire).
- Created, maintained, and retired **SAP Master Data Objects** including Material Masters, Recipes, Bill of Materials (BOMs), Resources, Master Inspection Characteristics, and Info Records to ensure data accuracy and compliance.
- Managed **Quality Management (QM) data** in SAP by developing and updating Inspection Plans, Sampling Schemes, Draw Procedures, COA Profiles, Raw Material Specifications, and Direct Material data.
- Acted as a Subject Matter Expert (SME) for SAP Master Data, training stakeholders and staff on best practices, governance frameworks, and compliance standards.
- Supported **local and global SAP projects**, providing input during design, reviewing user requirements, and leading **User Acceptance Testing (UAT)** to validate system functionality.
- Guided development & testing teams during API integrations, UAT, and deployment activities.
- Delivered “Click-not-Code” Salesforce solutions, leveraging configuration tools like Workflow Rules, Process Builder, Validation Rules, and Flows to automate business processes efficiently.
- Ensured **governance and maintainability** by documenting all declarative changes and maintaining alignment with the organization’s Salesforce Center of Excellence (CoE).
- Championed the “**Click before Code**” approach—promoting low-code, high-impact Salesforce implementations that reduced development time and maintenance cost.
- Designed and implemented **Salesforce CPQ configurations**—including product bundles, price rules, approval workflows, and discount structures—using **Click-based declarative setup**.
- Configured and supported **Salesforce Experience Cloud** to enhance customer/member portals, enabling secure self-service access and improved engagement.
- Worked with **Salesforce Health Cloud** to manage patient/member data, provider relationships, and care coordination in alignment with healthcare workflows.
- Gathered requirements and translated business processes into **customized Salesforce solutions**, ensuring seamless integration with external systems (EHRs, claims platforms, third-party apps).

- Performed **data mapping, cleansing, and governance** to maintain Salesforce Health Cloud data quality and compliance with HIPAA and CMS interoperability standards.
- Managed fee for services (FFS) models easy to operate for clients by offering transparency in billing, freedom to choose providers and services to offer smooth operations.
- Handled fee for service (FFS) model to manage care claim adjudication processes like eligibility, enrollment, claims processing , quoting, finance, etc.
- Published the developed dashboard, and reports on the Tableau Server so that the end users having access to the server can view the data.
- Managed Statements of Work (SOW), track budgets, and developed presentations for senior executive leadership and stakeholders.
- Interpreted **CMS-0057-F regulations** and FHIR Implementation Guides (CARIN BB, US Core, Da Vinci PDEX, CRD, DTR, PAS) to develop technical specifications.
- Defined business and technical requirements for implementing and enhancing **FHIR-based APIs** in collaboration with product and IT stakeholders.
- Mapped proprietary system data to **FHIR resources and profiles**, integrating with EHRs (Epic, Cerner) via FHIR APIs.
- Supported design, testing, and deployment of mandated APIs, including Prior Authorization, Patient Access, Provider Access, and Payer-to-Payer APIs.
- Executed **testing and validation** using Postman; ensured FHIR API outputs complied with HL7 IGs and CMS interoperability standards.
- Delivered documentation, compliance reporting, and training on **FHIR data standards** to business and technology teams.
- Partnered with **data and finance teams** to ensure accurate **reconciliation of payment batches**, chargebacks, and settlement files.
- Prepared and transformed Salesforce datasets for analysis and reporting, ensuring accurate data mapping across business functions.
- Performed data cleansing and governance activities to maintain Salesforce data accuracy, integrity, and compliance with organizational standards.
- Collaborated with cross-functional teams to gather requirements and configure message flows using Rhapsody Integration Engine for seamless healthcare data exchange.
- Analyzed, tested, and validated HL7 , EMR integrations, and other clinical data formats within Rhapsody to ensure compliance with interoperability standards.
- Conducted secondary research and gathered insights on US healthcare sector related to pharmaceutical companies, payer, providers, etc.
- Handled Azure DevOps, & AWS to automate the build, test, and deployment of applications to production, fostering continuous delivery.
- Worked extensively on e-commerce sales processes like lead management, quoting, Provider Network Management, Claims and enrollment as well as sales stream processes across both commercial and Medicare lines of business.
- First hand experience in working closely with Process SMEs to prepare Process Definition Documents (PDD) & Solution Design Documents (SDD) and educated/ knowledge transferred SMEs to collaborate with Bots in production.
- Supporting business and technical teams during robotic projects and mitigating/Resolving risks and issues that may affect project schedule, cost, scope, and quality.
- Facilitating priority meetings with stakeholders to help businesses understand the impact of the JIRA in prioritizing them.
- Worked on Node.js APIs for data integration and provider network management, enabling smooth exchange of information across Medicaid/Medicare applications.
- Collaborated with developers to design, test, and validate API endpoints, ensuring seamless connectivity between Epic Tapestry, MongoDB, and external systems.
- Partnered with payer business, clinical, and IT stakeholders to define AI-driven use cases that improved cost optimization, member engagement, and operational efficiency.

- Supported initiatives aligned with value-based care and digital health transformation, leveraging AI/ML analytics for predictive insights and decision support.
- Identified opportunities to deploy **AI models** and automation to improve claims adjudication accuracy, member outreach, and provider performance monitoring.
- Acted as an **AI Functional Consultant** for enterprise healthcare platforms, ensuring AI capabilities directly supported payer goals such as reduced administrative burden and improved care coordination.
- Proficiently used AI tools like ChatGPT and Microsoft Copilot giving proper prompts for improving productivity, coding, documentation, modifying requirements, business analysis, etc.
- Partnered with payer business, clinical, and IT stakeholders to define AI-driven use cases that improved cost optimization, member engagement, and operational efficiency.
- Supported initiatives aligned with value-based care and digital health transformation, leveraging AI/ML analytics for predictive insights and decision support.
- Handled GAP analysis, collaboration, stakeholder management, Provider Data Management, Provider Network Management, Claims, Encounters, Medicare and Marketplace Risk Adjustment, backlog management, user stories writing, and iterative development.
- Facilitated, participated and collaborated with developers, stakeholders, product owners, Project Manager(s), SME's, Vendor and Business Users in requirements gathering/JAD sessions.
- Worked extensively on Epic Tapestry to manage administrative processes like member enrollment, claims processing, provider management, and financial operations for smoother user experience.
- Demonstrated a high level of working knowledge with information systems methodologies and processes (i.e., Project Life Cycle, System Development Life Cycle and Change Management process).
- Created high-level models and user prototype interfaces using Figma to identify and validate business processes and resolutions when appropriate.
- Involved in all the sprint ceremonies such as daily stand-up calls, requirements gathering meetings, sprint planning sessions, story grooming sessions, mid-sprint reviews, and sprint retrospective meetings.
- Worked on editing the Master page and the CSS file using SharePoint designer to customize the navigation and appearance of the site.
- Handled QNXT files library for the Qt framework, providing extra cross-platform classes and utilities.
- Worked on developing custom Web parts using the SharePoint object model and deploying them on the portal.
- Worked on creating a project status dashboard on the PMOIT site. This involved deploying reports created using SSRS and displaying the reports on SharePoint.
- Publish the developed dashboard, and reports on the Tableau Server so that the end users having access to the server can view the data.
- Conducted **gap and quality analysis** on Salesforce data to identify inconsistencies, redundancies, and missing information, driving system improvements.
- Supported **migration strategy and execution**, including data extraction, validation, and upload into Salesforce during system transitions.
- Experienced in handling new Mongo DB integration work for consolidated billing and streamlined access services, **data analytics, manage database, insight generation from data**, etc.
- Developed a replacement tax analysis system for Foreign Sales Corporation processing using ANSI SQL and R: BASE. Responsibilities include table design to 3NF and creation, view/form/report generation, and transaction Cursor processing.
- Involved in developing Screen Mock-ups using Pencil Project to describe the interface Requirements.
- Created a RACI matrix to identify all relevant stakeholders in the project.
- **Used JIRA for user story management, issue tracking, story boarding, visualization, and requirement traceability.**
- Involved in project management, developing project plans, setting project schedules and milestones, and scheduling tasks and activities using MS Project.
- **Environment:** Jira v6.4, MonGo DB, Node JS API, Epic Tapestry, MS Visio, Eclipse IDE, Pencil Project, COBOL, HDFS, Java, MITA, Oracle SQL developer, Oracle Enterprise Manager, SQL loader, Data Pump Export/Import, Apache Hadoop,

Tableau, Adobe Analytics, Alteryx, Dataiku, Hortonworks Data Platform, Apache Spark v 1.5.2, Apache Sqoop v 1.4.6, Java, Apache Flume v 1.5.2, Kafka 0.10, HBase v 1.1.2, Hive v 1.2.1, Atlas, Tableau v 9.0, HDFS.

AbbVie Pharma Inc. Texas
Senior Business Analyst

Jan 2020 – Aug 2023

Description: The project involved working on patient data integration and data integration, aggregation, reporting, and data quality monitoring and proposing digital-focused ideas for the immunology business. Coordinating with Patient Services data strategy and Commercial Data Lake Operations for Immunology brands.

Roles & Responsibilities:

- Worked directly with the Market Access function to understand specific business needs and to collect complete and correct requirements by interviews, workflow analyses, and eased discussion to deliver data or technology solutions.
- Worked on Access and Reimbursement business processes and gaps, finding demand, and handling defining solutions to address business demand.
- Worked on Azure DevOps, AWS, & JIRA platform for management of SDLC and deploying the projects into working products.
- Conducted **data analysis and process reviews** to identify gaps, improve master data structures, and enhance **supply chain process efficiency** through SAP modifications and alignment.
- Authored and maintained technical documentation, SOPs, training materials, and process workflows in accordance with Good Manufacturing Practices (GMP) and regulatory standards.
- Created **user interfaces, dashboards, and reports** using Salesforce's point-and-click functionality to empower business users with real-time insights.
- Led requirement workshops to translate business needs into **Click-based Salesforce configurations**, ensuring alignment with industry best practices and system scalability.
- Managed **Change Sets and Metadata Deployments** to migrate Click configurations across environments (Dev → UAT → Production).
- Supported **product technology transfers** by ensuring SAP master data readiness for new product introductions and production campaigns.
- Prepared **data quality and operational reports** for production and supply chain leadership, summarizing trends and recommending continuous improvements.
- Analyzed regulatory mandates like HIPAA, CMS interoperability and translated them into actionable system requirements like Membership claims, benefits, eligibility check, etc.
- Supported troubleshooting and optimization of Rhapsody interfaces, improving system performance and reducing integration errors.
- Partnered with R&D and Commercial teams to analyze and optimize **product lifecycle data processes**.
- Supported integration of Oracle Cloud (data source) with Azure Data Lake, improving product data management pipelines.
- Translated regulatory and compliance requirements (HIPAA, CMS) into **system and PLM design specifications**.
- Designed and validated **workflows for product data management** (items, BOMs, change requests), ensuring alignment with **GxP and FDA requirements**.
- Led UAT, coordinated with stakeholders for sign-off, and supported **go-live readiness**.
- Contributed to solution strategy and pre sales support, including proposal inputs and client demos.
- Managed and transferred data, translated database structures and conducted QA testing for data integrity.
- Work with Business area to translate CMS interoperability, EMR integrations, state government regulations, and NCQA requirements.
- Strong functional expertise in the Healthcare Payer Area - Membership claims, benefits, eligibility check, ICD10, HIPAA, HL7, FHIR, ICD, CPT, CMS HCPCS Exposure to Health Care Industry standards like HIPAA / PHI.
- Responsible for review and approval of data specifications, solution, process flow, and data sharing from the Privacy and Compliance team.
- Managed fee for services (FFS) models easy to operate for clients by offering transparency in billing, freedom to choose providers and services to offer smooth operations.

- Handled Epic Tapestry module for member enrollment, claims processing, management of providers, and other financial operations.
- Performed data analysis with standard statistical methods, data profiling, and data quality techniques and interpreted the results for SMEs.
- Involved in performance testing of Medicaid client server claims processing system, Medicaid MCC/MCO, and Medicaid Management Information System (MMIS).
- Establishing and keeping high-quality relationships with all levels across the company and with external partners.
- Supporting HEOR organization on Real World Evidence studies with external partners and internal analysis for Immunology patient services and coordinated partner plan testing for BlueCard application.
- Responsible for coordinating the implementation of Specialty pharmacy data integration solutions with the Commercial Data Lake team.
- Managed **Oracle Cloud** as a data source and Azure Data Lake as storage platform for data pipeline development, data translation, and optimization (ETL/ELT).
- Working in software integration testing and web services API testing for data ingestion workflows, and secure exposure protocols using SOAP UI.
- Worked with the QA team in creating a test suit, test cases, test files, and test definitions.
- Worked on Integration applications like (Web Services, Mainframe, MS Office, GUI, Outlook, etc.) using workflow, and automation tools (Blue Prism).
- Worked with 837, UB92, UB04, CMS 1500 HRP claims and HIPAA 834, 835, 270/271, 276/277, 278 transactions using Epic Tapestry.
- Supported developers in handling Node JS API in managing content with the operating system, manage files, handle network requests.
- Supported developers in handling **Node.js APIs** for content management, file handling, and secure data transactions within patient data integration workflows.
- Performed **Web Services and API testing (SOAP UI)** to validate data ingestion workflows and ensure compliance with HIPAA and CMS interoperability requirements.
- Extensively used Microsoft Power BI Desktop for the data modeling process and create various visualizations.
- Supported multiple teams, developed, and delivered numerous BI reports, operational scorecards, actionable KPIs, and predictive trend analyses using complex Excel Macro, power pivots, Power View, Power BI, OLAP Cube, and MDX to analyze efficiency performance and to predict the future level of operational activities.
- **Acted as a liaison between client and payer/intermediary. Experienced in Health payer rules (HRP), requirements, governmental regulations, and HIPAA compliance.**
- Designed Use Cases using UML and managed the entire Functional requirements life cycle using RUP. Utilized corporation-developed Agile SDLC method.
- Develop Reports/interactive dashboards with different analytics views (Drill-Down/ Dynamic, Pivot Table, charts, Tabular with filters) based on user requirements in Tableau and Power BI.
- Environment: JIRA v6.4, MonGo DB, Node JS API, Epic Tapestry, MS Visio, Eclipse IDE, COBOL, HDFS, Java, MITA, Apache Hadoop, Tableau, Adobe Analytics, Apache Spark v 1.5.2, Apache Sqoop v 1.4.6, Java, Apache Flume v 1.5.2, Kafka 0.10, HBase v 1.1.2, Hive v 1.2.1, Atlas, Tableau v 9.0, HDFS, Oracle SQL developer, Oracle Enterprise Manager, SQL loader, Data Pump Export/Import.

ICICI Bank - India

Jan 2017 - Nov 2019

Business Analyst

Description: EDMA (Enterprise Data Management & Analyst) Community Banking: NYCB and FSB Merger project The banking application used to be called The Complete Banking Solution (TCBS). It is now called DNA - .Net Application (dot net application). Following the workflow process for completing the requirement validated and tested.

Responsibilities:

- Gathered and documented business and technical requirements across **Lending, Risk, Treasury, and Finance** domains to support core banking data initiatives.

- Designed and maintained **logical and physical data models** for Data Warehouse (EDM) projects to improve accuracy, consistency, and reporting efficiency.
- Authored and optimized **SQL queries** for data extraction, validation, and reconciliation between source and target databases.
- **Led end-to-end business analysis and product planning for the Collateral Management (Titles) initiative**, defining MVP scope, business rules, and deployment strategies to streamline lien tracking and title release workflows.
- **Collaborated with cross-functional teams in Technology, Enterprise Architecture, and Operations** to design and implement **Collateral Management system integrations** between loan servicing platforms and external title agencies, ensuring data accuracy and regulatory compliance.
- **Translated complex business requirements into detailed user stories and acceptance criteria** for **Collateral Management enhancements**, enabling automation of title verification, ownership validation, and electronic lien release processes.
- Partnered with merchant services, finance, and IT teams to gather and document business requirements for **payment processing and POS system enhancements**.
- Supported **end-to-end payment workflows**, including **authorization, settlement, refund, and reconciliation** processes across retail and e-commerce environments.
- Collaborated with hardware and software vendors to integrate POS terminals, card readers, and payment gateways into existing enterprise systems.
- Analyzed transaction data and **payment failure patterns** to identify system bottlenecks and improve success rates for debit/credit and digital wallet transactions.
- Designed and validated business rules for EMV, NFC, and contactless payment flows, ensuring compliance with PCI DSS standards.
- Participated in **UAT for POS integrations**, validating transaction accuracy, connectivity between POS and backend financial systems, and system behavior under high-volume conditions.
- Supported **migration from legacy POS platforms** to modern cloud-based or API-driven payment ecosystems.
- Supported **ETL design and development** using tools like **SSIS** and ensured compliance with financial data governance and audit requirements.
- Worked extensively on **Azure Data Factory (ADF)** and **Azure SQL Server** for banking data integration, transformation, and reporting pipelines.
- Developed **Power BI dashboards** for financial and operational reporting—tracking metrics such as loan performance, deposits, and customer risk exposure.
- Partnered with **Data Engineers** and **Enterprise Architects** to ensure data alignment, schema optimization, and data quality within the data warehouse.
- Led product planning and roadmap sessions for **Collateral Management (Titles)**, defining MVP (minimum viable product) scope, release strategy, and deployment roadmap with business and technology leads.
- Defined business rules and process workflows for title tracking, lien release, and collateral verification, ensuring compliance with internal controls.
- Collaborated with **technology and business stakeholders** to identify data quality issues, propose corrective measures, and maintain master data accuracy.
- Supported **User Acceptance Testing (UAT)** for Data Mart components (Banking, Finance, Customer, Mortgage, and Treasury), validating transformation logic and business rules.
- Conducted gap analysis and contributed to **data migration and conversion strategy** for enterprise banking platforms, ensuring smooth go-live execution.
- Participated in **JAD sessions, backlog refinement, and sprint planning** using **Jira**; created epics and stories to manage development and QA deliverables.
- Authored **BRDs, FRDs, and Data Mapping Documents**; ensured traceability through detailed test cases and acceptance criteria.
- Delivered training and knowledge transfer to business users on new reporting processes, BI dashboards, and SQL-based validations.

- Created the Epics and Stories in the corresponding components like Atomic, DW_Reference, Data Marts (Banking, Finance, Customer, MTG_Servicing, MTG_Origination and Treasury).
- Core conversion project is a Huge Database project, created and updated the stories including Development and QA stories.
- Partnered with **Enterprise Architecture and Technology** to design scalable solutions, ensuring alignment with data governance, migration, and integration frameworks.
- Defined and documented **business rules and process flows** for title tracking, collateral verification, and lien release within the loan servicing lifecycle.
- Followed the process to fulfill Legal, Audit, or Compliance obligations.
- Taking lead on sprint planning and assigning the stories to the corresponding developer and adding the business ranking to the story, updating the defects with severity levels as per the priority defined.
- Performed UAT on Data mart for all the components Data Marts (Banking, Finance, Customer, MTG_Servicing, MTG_Origination and Treasury).
- Conducted the UAT walkthrough with the Business and set the expectations and UAT Timelines.
- Prepared the UAT worksheets adding impacted tables, columns and Testing type and change description and shared with the Business.
- Gathered requirements and designed **functional workflows** for large-scale **ERP and data management projects**.
- Worked extensively on **core banking product lifecycle data**, facilitating migration and compliance requirements.
- Supported functional testing, UAT, and client workshops to validate business-critical solutions.
- Shared the Cognos reports to the Business including impacted columns and change type to help the Business to run the SQL to reports and validate the results.
- Performed the testing with the business to show the conversion changes in between the PEDM and EDM Databases.
- Participated in all the phases of the Software Development Life Cycle (SDLC) using a Hybrid Methodology.
- Created Use Case Diagrams, Activity Diagrams, Sequence Diagrams, and ER Diagrams using MS Visio.
- Facilitated integration of SAP with 3PL providers and ensured smooth EDI/ IDoc transactions (POs, ASNs, invoices, shipping notices) for supply chain efficiency.
- Conducted **gap and quality analysis** on Salesforce data to identify inconsistencies, redundancies, and missing information, driving system improvements.
- Supported **migration strategy and execution**, including data extraction, validation, and upload into Salesforce during system transitions.
- Worked on functions such as Change Control and Request, and managed complaints to ensure customer satisfaction.
- Active involvement in ETL design for data integration and master data management.
- Experience in managing multiple stakeholders across the organization, and in QA integration of systems.
- **Environment:** MS Visio, MS Office Suite, SQL Server, Azure Data Factory (ADF), Azure SQL, SSIS, Power BI, Jira, MS Visio, Data Warehouse, Cognos, Oracle SQL Developer, and ETL tools..

Piramal Life Sciences - India

Sep 2010 - Dec 2016

Business Analyst

Description: The role involved leading cross-functional teams across time zones, managing stakeholders, and driving program delivery using Agile/Waterfall methodologies while optimizing resources, risks, and performance. I oversaw large-scale, global programs across ERP, CRM, eCommerce, and enterprise systems, ensuring alignment with business goals, governance standards, and regulatory compliance.

Responsibilities:

- Lead and oversaw global, multi-country programs and enterprise application portfolios (ERP, CRM, eCommerce, and enterprise systems), ensuring alignment with business strategy and objectives.
- Established and managed portfolio governance frameworks, applying Agile, Waterfall, and hybrid SDLC methodologies to deliver programs on time and within budget.

- Collaborated on multiple **ERP implementation and enhancement projects** (Oracle Cloud, Microsoft Dynamics 365, Agility and Epicor P21) to streamline finance, supply chain, and product lifecycle workflows across global business units.
- Analyzed business workflows in **Epicor Prophet 21 (P21)** and **Sage ERP** systems for distribution clients, identifying opportunities to automate order processing, invoicing, and stock reconciliation.
- Collaborated on ERP data migration and validation activities, ensuring data consistency across master data objects (Materials, Vendors, Customers) during system upgrades.
- Led cross-functional teams on **ERP, CRM, and PLM initiatives**.
- Partnered with R&D, Manufacturing, and Regulatory teams to integrate **PLM data (BOMs, engineering changes, master data)** into SAP and Oracle systems for **end-to-end visibility**.
- Conducted workshops with business users to gather PLM/ERP requirements and prepared **BRDs, FRDs, and functional designs**.
- Collaborated with business stakeholders to gather and analyze functional requirements for **Salesforce CPQ** (Configure, Price, Quote) processes, ensuring alignment with sales and revenue objectives.
- Partnered with technical teams to **design and validate Salesforce CPQ solutions**, providing input on system architecture, product catalog structure, and automation strategies.
- Provided post-deployment support, user training, and documentation for smooth adoption of Salesforce CPQ enhancements.
- Oversaw Oracle and SAP system implementations, including UAT, data migration, and stakeholder training.
- Acted as a **trusted advisor to leadership** in defining PLM roadmaps and governance frameworks.
- Acted as a liaison between business users, IT, and SAP teams to gather and translate requirements into SAP solutions across **Direct Procurement, Logistics, and Inventory Management**.
- Worked on business and finance operations like **PR-to-PO (Purchase Request -to- Purchase Order), vendor invoicing, and GR/IR (Goods Receipt/ Invoice Receipt) processes** within SAP MM, ensuring compliance with procurement and audit standards.
- Managed statements of work (SOW) & purchase orders (POs), tracked budgets, and developed presentations for senior executive leadership, etc.
- Supported inbound/outbound logistics, stock management, cycle counting, and serial number tracking using SAP WM/IM modules.
- Collaborated with Finance teams to align **AP, AR, and asset management processes** with SAP FI/CO integration.
- Partnered with cross-functional teams to integrate **PLM data (BOMs, engineering changes, master data)** into SAP for end-to-end visibility.
- Facilitated integration of SAP with 3PL providers and ensured smooth EDI/ IDoc transactions (POs, ASNs, invoices, shipping notices) for supply chain efficiency.
- Created and validated **BRDs, FRDs, and test cases**, supported UAT, and managed defect triage to ensure successful SAP deployments.
- Delivered continuous improvements by analyzing system gaps, proposing enhancements, and streamlining supply chain processes through SAP.
- Defined program roadmaps, resource allocation, budgets, and risk management strategies to drive successful program delivery.
- Partnered with executive leadership and stakeholders to gather business requirements, define success criteria, and ensure transparency in decision-making.
- Managed program dependencies, resolve conflicts, and implement change management strategies to ensure smooth adoption of enterprise solutions.
- Oversaw vendor and partner relationships to support ERP, CRM, Salesforce, **Oracle**, and other enterprise platforms.
- Ensured compliance with regulatory standards and governance frameworks in highly regulated industries (healthcare, finance, telecom).
- Monitored and reported on program performance using KPIs and dashboards, providing actionable insights to leadership.
- Mentored and guided project managers and team members, promoting professional development and best practices in program management.

Environment: MS Visio, MS Office Suite, Mainframe, SQL, COBOL, ETL, UML, Data Warehouse, Tableau, and UAT Testing.

Technical/ Domain Skills

<i>Methodologies</i>	Agile, Waterfall, Rational Unified Process (RUP), UML
<i>Business Modeling Tools</i>	MS Visio, Rational Rose, Axure, Adobe Photoshop
<i>IDE Tools</i>	Rational Rose, Rational Clear Quest, Rational Clear Case, MS Visio, Visual Studio Code, UML.
<i>Requirement Management Tools</i>	TFS, Rational RequisitePro, Doors, MS Share point, HP ALM, HP QC
<i>Project Management</i>	MS Project, JIRA, Confluence
<i>Business Applications</i>	MS Office Suite –MS Word, Excel, PowerPoint, MS Outlook
<i>Testing Tools</i>	Software Application Testing Life Cycle, QTP, QC, HP ALM, Selenium, HP QTP, Load Runner
<i>Reporting Tools</i>	IBM Cognos BI, Micro Strategy, Business Objects, Tableau, SQL Server Reporting Service, Microsoft Power BI, Spotfire
<i>Databases</i>	MY SQL, SQL Server, Oracle Enterprise manager, MS Access
<i>Operating Systems</i>	Windows, LINUX/ UNIX
<i>Domain Knowledge</i>	HIPAA, Claims Processing, EDI, HL7, FHIR, ICD, CPT, HIX, EMR/HER, PPACA, FACETS, Medicaid, Medicare (Part A, B, C and D), PPO, HMO, Dental claim, and POS.
