Additional Skills: Risk Management, Issue Remediation, Control Evidence Review, Compliance Reporting, Stakeholder Engagement, Audit Readiness, Communication & Change Management, Technical Documentation, Job Aid Creation, Data Stewardship

Professional Experience

Capital One — Richmond, VA

Data Analyst / Automation Specialist

2022 – Present

- Led execution of data governance and risk controls, including implementation of automated data quality checks and compliance workflows.

- Reviewed and validated control evidence in alignment with regulatory reporting standards and audit expectations.
- Designed and documented end-to-end process flows and data lineage diagrams for cross-team transparency.
- Built scalable enterprise dashboards with KPIs and compliance metrics using Power BI, MicroStrategy, and SQL.
- Developed Python scripts and SQL queries to automate error detection, reporting, and alerting processes.
- Collaborated with stakeholders across risk, compliance, tech, legal, and data teams to drive issue remediation efforts.
- Created training documentation, process walkthroughs, and job aids for self-service data reporting and audit readiness.
- Actively participated in change control boards, assessed impact, and communicated mitigation plans to business leaders.

Harris Teeter — Manassas, VA

Store Accountant

May 2021 – Dec 2022

- Managed store-level financial operations, including daily reconciliation, cash audits, and reporting.
- Created automated Excel tools to detect anomalies and streamline error tracking.
- Supported training initiatives by producing job aids for new reporting workflows.

Road to Hire Program — Remote (Charlotte, NC)

Software Engineering & Business Analytics Fellow

2021 – 2022

- Completed intensive training in SQL, Python, process management, and data reporting.
- Designed interactive dashboards to support KPI tracking and business decision-making.
- Authored documentation for analytics tools and processes, ensuring accessibility across technical and non-technical users.
- Worked in agile teams to implement full-stack applications with integrated reporting pipelines.

Key Projects & Contributions

- **Compliance Controls Framework:** Developed an automated SQL/Python-driven compliance validation tool to detect data inconsistencies and improve audit response time by 40%.
 - **Process Documentation Library:** Created a centralized documentation hub and standardized templates for risk, compliance, and reporting processes.
 - **Cross-Functional Issue Management:** Partnered with enterprise teams to log, track, and remediate data quality and control gaps across platforms.
 - **Audit Readiness & Data Stewardship:** Led development of audit preparation materials, mapping data flows and validating lineage across multiple systems.
-

Education & Certifications

Road to Hire — Software Engineering & Business Analytics Program (2022)

- Focused curriculum on data governance, process automation, and reporting best practices.

Certifications:

- Google Data Analytics Professional Certificate (Coursera)
 - AWS Certified Cloud Practitioner
