

Professional Summary:

A technology enthusiast with domain expertise developed through undergraduate program and ~4 years of industry experience. Significant expertise in data analytics augmented with master's degree in business intelligence and Analytics. Highly confident and motivated individual with experience working in diverse cultures and situations.

Education

Saint Joseph's University, Philadelphia, PA <i>Master of Science in Business Intelligence and Analytics</i>	Dec 2020
Manipal University, Bengaluru, India <i>Post Graduate Diploma in Banking</i>	Feb 2017
NRI Institute of Tech. & Management, Gwalior, India <i>Bachelor of Engineering in Electronics and Communication</i>	May 2012

Technical Skills:

Programming Languages: Python, VBA, SQL, R
Statistical Tools: JMP, SAS E miner, MS Excel, RStudio, Google Analytics
Software / Databases: MySQL, Oracle, MS Excel, Tableau, Qlik Sense, Power BI
Others: Data Analytics, Business Intelligence, Database Management & System
Tools: SSAS, SSIS, SSRS, JIRA, JMP, SAS Enterprise Miner, Google Analytics
Frameworks: NumPy, Pandas, Scikit-learn, TensorFlow, Matplotlib

Work Experience:

Jinpushp InfoTech Data Analyst	Indore, India Mar 2017 – Feb 2018
- Conceptualized and designed an innovative metrics for better assessment of self-help groups, usually composed of 10-20 semi-rural women, for a local banking client leading to disbursement of \$3M USD, hence generating net interest income of \$0.2M USD for the bank - Created sales lead generation tool dependent on banking activity data of top 10% corporate customers of each banking channel from the region - Create power BI Dashboard / reports on key business metrics and KPI for business monitoring - Proficient in design and various dashboards, reports utilizing Tableau visualization such as bar graphs, scatter plots, pie charts, and maps etc. making use of actions and other local and global filters, according to the end user requirement. - Created functional specifications for new systems and processes - Involved in creating database objects like tables, views, procedures, triggers, and functions using MySQL to provide definition, structure and to maintain data efficiently - SQL coding and managing data sets, developing reports and dashboards, and troubleshooting data issues - Developed Tableau dashboards per the requirements captured within the JIRA user stories and in view of their acceptance criteria - Supported various business transitions, helped define the change management process and ensured smooth transition - Gathered, identified, and documented business requirements and created PowerPoint presentations for Business Analytics & Insights team - Demonstrated MS office expertise in Word, PowerPoint, Excel (including VBA) with Pivot Tables and V Lookup - Also responsible for ensuring reports, analysis and dashboards are shared with stakeholders, using tools such as Google Analytics, or data stored in internal databases to surface these insights	
Gwalior Engineering College Assistant Professor, Electronics & Communication Dept.	Gwalior, India May 2013 – Jan 2016
- Created cohort-based placement process for different interest areas of students driven through data analysis of college placement camps in last five years - Guided research & development related various projects which led to implementation in various industrial applications in the field of electronic panel design - Directed student interaction by conducting exams, providing expert lectures in the field of Digital Electronics and switching theory, Digital Signal Processing, Satellite Communication, VLSI - Managed large class size of 50+ students by utilizing power point presentations & hands on teaching approach for 2nd, 3rd and final year batches of engineering - Assisted departmental head to perform duties like conducting seminars, arranging technical competitions, and coordinating industrial visits	

Data Analyst

- Responsible for data management, analysis, and prospect research to identify KPI
- Utilize Google Analytics to track customer/volunteer engagement
- Utilize data tools and languages such as SQL and tableau to pull and visualize data
- Report monthly data, framework, and instructions for continued dashboards updates
- Develop reports for senior managements interpreting and presenting customer/volunteer engagement trends; provide strategies and recommendations that were implementable
- Responsible for performing accurate, relevant analysis of information related to digital concerts, including utilization and other descriptive metrics

Academic Projects and Trainings:**Saint Joseph's University (GPA-3.9/4.0)**

Aug2019-Dec 2020

Banking Revenue Prediction Model (Data Mining)

- Built a model that predicts profitability and revenues for any retail bank by using different banking product database of customer's banking habit and help create guidance for future marketing campaign
- Used MLR model for Bank's revenue prediction and did multicollinearity and Outlier check for more defined and distortion free revenue prediction
- Used **JMP statistical software** to analyze data and generate models

Sales Performance Dashboards of a Dermatology Company

- Worked on Dermatology products sales dataset and responsible for the design, implementation and delivery of executive-level dashboards using **Tableau, Power BI & Qlik Sense**
- Developed and analyzed trends of monthly/yearly KPIs for performance improvement; generated sales insights for various products over varying time-period

Predictive Model for Diabetes risk Prediction (Predictive Analytics)

- Leveraged medical data of adult women to predict the likelihood of being diabetic in **SAS Enterprise miner**
- Used Decision Tree, Neural network, Logistic Regression and MLR models to generate and compare output of these models and recommended the best model using ASE and MSE as evaluation criteria's

Hospital Management - Database Design Project (SQL)

- Developed a Hospital management system to store, update and search patient and doctor data and generate automated reports in the form of patient bill, diagnosis report and patient prescription
- Designed an ER-model and translated the model to relational schema to develop the key tables of the database

Prediction of Chronic Heart Disease Project (R)

- Predicted probability of heart disease occurrence using patient's medical history by using different libraries in R
- Prepared data using pre-processing and Data cleaning and evaluated model performance using significance testing and test residual normality
-

Prediction of Chronic Kidney failure Project (Python)

- Built different machine learning models in python to predict the possible onset of kidney failure in a patient based on factors such as blood pressure, age, and hemoglobin
- Predicted probability of kidney failure occurrence using patient's medical history by using various python libraries
- Fine-tuned the performance of each model by manipulating & removing hyper parameters
- Evaluated all the models based on accuracy, sensitivity and specificity

Certifications

- Qlik Sense Business Analyst Qualification
- MSBIA Statistics Proficiency
