SUMMARY

- 4+ years of **Java Full Stack Development** experience to deliver secure, scalable, and high-performance applications.
- Apply expertise in **front-end** (React.js, Angular, HTML5, CSS3), **back-end** (Java, Spring Boot, Hibernate), and **cloud** (AWS EC2, S3, RDS, Lambda) technologies.
- Contribute to innovative projects by implementing **microservices architecture**, optimising APIs, and improving user experience.
- Integrated ML models into production systems for tasks such as predictive analytics and image classification using Python, TensorFlow, and Scikit-learn.
- Applied data preprocessing, model training, and performance tuning techniques to deliver end-to-end ML pipelines for real-world use cases.
- Experienced in designing scalable system architectures and component-level designs, ensuring performance, reliability, and maintainability in distributed systems.
- Experienced in developing **UNIX shell scripts** for batch processing.

SKILLS

Methodology	:	SDLC, Agile.
Languages	:	C, Java, JavaScript, TypeScript, SQL, Python.
Frameworks/Libraries:		Angular, Spring Boot, Microservices, RESTful APIs, GraphQL, Apache Kafka.
IDE's	:	IntelliJ IDEA, Visual Studio Code, Eclipse.
Web Technologies	:	HTML, CSS, Bootstrap, JavaScript, jQuery, Ajax, JSON, XML.
Cloud Technologies	:	AWS, Azure.
Database	:	MySQL, Oracle, MongoDB.
Build /Other tools	:	Maven, Gradle, Jenkins, Docker, Kubernetes, Splunk.
Version Control Tools :		Git, GitHub, Jira, Bit Bucket.

EXPERIENCE

SafeWay, US | Jan 2025 – Current | Java Full Stack Developer

- Developed and maintained **RESTful APIs** using **Java 8**, **Spring Boot**, **Hibernate**, and **JPA**, implementing **Spring Security** for authentication and authorization.
- Designed and built responsive UI components using **React.js**, **Redux**, **HTML5**, **CSS3**, and **Bootstrap**, improving user experience and engagement by 35%.
- Deployed microservices to **AWS EC2**, configured **S3** for object storage, and managed **RDS** for database operations.
- Built serverless workflows with **AWS Lambda** integrated with **CloudWatch** for logging and monitoring.
- Optimized system performance with **Redis caching** and SQL query tuning, reducing API latency by 30%.
- Managed real-time event processing using **Apache Kafka** for high-throughput data pipelines.
- Implemented CI/CD automation with **Jenkins**, containerized services with **Docker**, and orchestrated deployments via **Kubernetes** across environments.
- Collaborated with QA to automate API testing with **Postman**, **JUnit**, and **Mockito**, resulting in 40% higher defect detection pre-release.

NMK Software Services, India | Jan 2021 - Dec 2023 | Software Developer

- Developed and maintained **RESTful APIs** using **Java 8**, **Spring Boot**, **Hibernate**, and **JPA**, implementing **Spring Security** for authentication and authorization.
- Designed and built responsive UI components using **React.js**, **Redux**, **HTML5**, **CSS3**, and **Bootstrap**, improving user experience and engagement by 35%.
- Deployed microservices to **AWS EC2**, configured **S3** for object storage, and managed **RDS** for database operations.
- Built serverless workflows with **AWS Lambda** integrated with **CloudWatch** for logging and monitoring.

- Optimized system performance with **Redis caching** and SQL query tuning, reducing API latency by 30%.
- Managed real-time event processing using **Apache Kafka** for high-throughput data pipelines.
- Implemented CI/CD automation with **Jenkins**, containerized services with **Docker**, and orchestrated deployments via **Kubernetes** across environments.
- Collaborated with QA to automate API testing with **Postman**, **JUnit**, and **Mockito**, resulting in 40% higher defect detection pre-release.

Projects&Achievements

- **Mars Surface Feature Analysis Using Multimodal AI (Idefics 9B)**

-Fine-tuned a 9B-parameter Idefics multimodal model to identify and describe 7 Martian surface features using NASA HiRISE imagery. Leveraged image preprocessing (normalization, resizing, contrast adjustment) with OpenCV and PIL. Integrated a Python-TensorFlow pipeline to analyze user-uploaded images and return detailed insights. Used data from NASA's Open Data Portal and Hugging Face Transformers with PEFT for efficient model adaptation.

- **Alzheimer's Stage Prediction via GCN | 47% Accuracy**

-Developed a 5-layer Graph Convolutional Network to classify Alzheimer's stages using brain connectivity graphs derived from DTI data. Achieved 47% prediction accuracy. Built and deployed a Flask-based web app for live stage prediction from uploaded matrix files. Integrated PostgreSQL for data management and used NetworkX for graph construction and analysis.

- Trained a deep learning model to detect objects in images and videos.
- Published a SCOPUS-indexed research paper: 'Smart Home IoT System: A Succinct Study'.
- Recognized as NMK Software Rising Star of the Quarter (2023).
- Nominated for 'Best State Representation' in One India Fest at LPU.

Education

Masters in computer science

Saint Leo University
