Open To Relocate | +1 (667) 216-1573 | soumyapednekar08@gmail.com | [LinkedIn](#) | [Portfolio](#) | [GitHub](#)

Experienced graduate holding a master's in information systems with a 2 yrs background in data science and android development, specializing in building analytics workflows and mobile applications. Built large language models, retrieval-augmented generation (RAG) systems, and conversational analytics interfaces for real-world data applications. Seeking full-time opportunity within a dynamic, growth-oriented company culture.

EDUCATION

M.S in Information Systems -University of Maryland Baltimore County, Baltimore, MD, **GPA 3.74/4** Graduated - May'25

Courses: Data Mining, Data Analytics for Cyber security and Statistical Learning, Advance Artificial Intelligence.

Bachelor's in Information Technology - Mumbai University, **GPA 3.6 /4**

May'23

SOFT & TECHNICAL SKILLS

Interpersonal: Growth Mindset, Leadership, Team Player, Attention to Detail, Negotiation, critical thinking, risk management.

Programming: Python, SQL, Java Script, React, HTML, CSS, R language, C & C++ language, PLSQL, PHP/MySQL

Cloud Services: AWS Machine Learning & Artificial Intelligence Services, Snowflake

Data Visualization: Power BI, Tableau

Tools hands-on: Oracle, Excel, Google Analytics, Generative AI, Figma, Notion, MS PowerPoint, SharePoint

WORK EXPERIENCE

Software Developer Intern | Chai , Seattle

Nov'24 – May'25

- Translated Figma prototypes into modular Dart widgets to build a Flutter mood-tracking app where users can securely journal daily feelings, integrating by firebase authentication and firestore for real-time private data storage.
- Configured firestore collections with real-time listeners and aggregation logic to capture users' mood check-ins and power analytics dashboards helping users visualize their emotional trends over time.
- Orchestrated cross-functional collaboration with design and marketing teams to integrate user feedback into app features, driving a 20% uplift in user engagement.

Business Analyst Intern | EXTERN, Remote

Aug'24 – Sep'24

- Conducted seed-funding analysis for Vectary, a 3D and AR design platform, leveraging strategic partnerships with Adobe, Shopify, and Sketchfab to underscore strong return on investment (ROI) prospects.
- Conducted requirement gathering and benchmarked 3D design democratization trends in e-commerce and education, applying goal setting to define success measures and uncover growth opportunities for accessible design tools.
- Evaluated freemium Software-as-a-Service (SaaS) business model sustainability and enterprise acquisition strategy, forecasting high customer lifetime value with minimal churn rate.

PROJECTS

BellaBeat Fit band Case Study | Tools: R, RStudio, ggplot2, dplyr [\[Link\]](#)

Feb'25

- Processed 11 Fitbit datasets using ETL techniques in R to identify trends in user activity and sleep patterns.
- Analyzed over 4k user records collected from wearable accessories (smartwatches, rings, bracelets) to uncover correlations between steps, sleep duration, and calorie expenditure, driving targeted marketing insights.
- Generated summary statistics (means, medians, variances) on transaction and user data to surface actionable trends.

Data Scientist's Learning Assistant Chatbot | Tools: OpenCV, Scrapy, BeautifulSoup

Dec'24

- Built a multimodal chatbot using Transformers, NLP (NLTK, spaCy), and Computer Vision (OpenCV, PyTorch), improving personalized learning for 500+ data science students with context-aware responses.
- Architected data-engineering pipelines with Scrapy and BeautifulSoup to ingest, clean, and transform web and multimedia sources accelerating model-training efficiency by 30% and improving prediction accuracy and user satisfaction.

Time Series Analysis | Tools: Pandas & NumPy, Scikit-learn, TensorFlow/Keras , Matplotlib & Seaborn [\[Link\]](#)

Dec'24

- Conducted quantitative analysis on 2 mil household energy readings by forward-filling missing values and resampling to hourly intervals, resulting in a standardized time series and meeting the data consistency goal.
- Engineered Forecasting features by extracting temporal attributes (hour, day, month), resulting in a 15 % reduction in Mean Absolute Percentage Error and achieving the forecasting accuracy goal.
- Automated the end-to-end pipeline in Jupyter Notebook by scripting data ingestion, model training, and visualization workflows, resulting in near-real-time monitoring and achieving the operational scalability goal.

CERTIFICATIONS

- [AWS Certified AI Practitioner \[May'25\]](#)
- [Google Data Analytics Capstone \[Feb'25\]](#)
- [Machine Learning Specialization. \(Stanford University & DeepLearning.AI\) \[Jun'24\]](#)
