PROFESSIONAL SUMMARY

Dedicated and detail-oriented Software Development Engineer with over four years of experience that includes two years of experience at Amazon, specializing in Tier-1 services for speech-to-text recognition and large-scale system optimization. Proficient in core programming languages such as Java and Python, with extensive expertise in AWS cloud services, including EC2, Lambda, VPC, and CodeDeploy. Proven ability to design and implement scalable solutions that drive efficiency and enhance user experiences. Led key projects, including the migration of production traffic from legacy systems and the development of multilingual speech recognition models, contributing to the successful deployment of innovative features for Alexa. Adept at working in agile environments, collaborating with cross-functional teams, and leading initiatives from concept through to production. Passionate about leveraging cutting-edge technologies like machine learning, natural language processing, and cloud computing to create impactful, future-proof solutions. Seeking a challenging role in a forward-thinking organization where I can apply my technical expertise, problem-solving skills, and commitment to excellence to drive impactful software development and operational success.

SKILLS

Programming/ Web Technologies:: Java, Python, HTML/CSS, JavaScript, Linux/Unix, REST APIs, Tomcat, AngularJS, Apache Kafka, Splunk, JSON, YAML, TypeScript, Spring MVC, XML, C/C++, Spring Boot

Cloud Technologies: AWS EC2, AWS ECS, AWS VPC, AWS Cloud Watch, AWS AutoScaling, AWS IAM, AWS S3, AWS CodeDeploy, AWS Lambda

Build & Version Control: Git, Maven, Gradle, BitBucket, Brazil

Databases: Oracle, MySQL, DynamoDB

Testing Frameworks: JUnit, TOSCA, Mockito, Quality Assurance (QA), Software Testing

Project Management: JIRA, SIM, Agile, SCRUM

DevOps Technologies: Ansible, Jenkins, Docker, Kubernetes

PROFESSIONAL EXPERIENCE

Open Cloud IT Solutions

Frisco, TX, USA

Software Engineer

April 2024 - Present

- Working as a Java Software Engineer, focusing on the development and enhancement of the service through testing.
- Oversaw the management of project tasks as a JIRA Manager, ensuring the progression and integration of service.
- Closely working with the QA team to track all the reported defects, assigned to the right point of contact, and provided bug fixes.
- Actively participated in code reviews, refactoring Java code to improve performance, adhere to best practices, and ensure maintainability of the codebase.
- Utilized comprehensive web technologies, including HTML5, CSS, & JavaScript, to construct and refine front-end design and functionality.
- Created unit test cases using Java JUnit and performed unit testing of all the modules.
- Developed scalable Java/J2EE modules with MVC architecture, ensuring organized codebase within the Eclipse IDE.
- Implemented SOAP web services to facilitate secure and reliable data exchange between different systems, ensuring compatibility across platforms.
- Developed backend services in Java and deployed them on AWS EC2 instances, utilizing Elastic Beanstalk for automated provisioning, load balancing, and scaling.
- Integrated AWS S3 for efficient and secure storage of static assets, ensuring reliable data retrieval and high availability for distributed systems.
- Actively contributed to reducing AWS operational costs by implementing auto-scaling groups and optimizing EC2 instances, which led to a 15% cost reduction.
- Designed and implemented automation pipelines for testing and deployment using Jenkins, reducing deployment time by 30%.
- Implemented security measures, such as encryption for sensitive data using AWS KMS (Key Management Service) and role-based access control with AWS IAM policies, improving data protection.
- Improved the performance of backend services by 20% through optimizing database queries and restructuring Java modules.
- Developed real-time data pipelines using Kafka Streams API to process and transform high-volume event data, ensuring low-latency processing for critical business applications.

Amazon**Software Development Engineer I****Seattle, WA, USA***June 2022 - March 2024*

- Member of the team responsible for Tier-1 services, focusing on speech-to-text recognition for Alexa voice requests, ensuring scalable and efficient runtime operations.
- Actively participated in a pivotal migration project of prod traffic, transitioning from legacy code base to a new infrastructure service for runtime speech-to-text recognition.
- Led the introduction of detailed locale dimensions using Java 8, significantly improving the aggregation of dashboards and the visibility of metrics at organizational level.
- Worked in the project of the latest Alexa's feature "Lets Chat "using LLM. And created a dialog act and translated the dialog act based on the model profile. And written the support rule routing on dialog act.
- Written unit tests using Mockito and performed integration testing on the models in service used for language identification at runtime for multilingual requests.
- Created new RESTful API's where the dependency service delegates the inference operations to our main service layer. And integrated these APIs to the service dependency layer. And implemented callback methods for the dependency service.
- Conducted comprehensive audits on Fleet Level Carnival Monitors using YAML, ensuring high availability and reliability of monitored services.
- Committed to software quality by authoring unit tests for every code alteration using Junit & Mockito, conducting integration testing, and overseeing deployment through to production to guarantee functionality.
- Established multiple shadow fleet testing environments to facilitate initial setup and usage by other dependent teams.
- Developed various automated pipelines to enable dependent teams to conduct thorough testing prior to production releases.
- Orchestrated the creation of multiple AWS EC2 instances across diverse regions for the deployment of new fleets.
- Engaged in a model shuffling initiative, responsible for the strategic scaling of fleet environments across multiple regions.
- Regularly participated in code reviews, software bug triage, and project design discussions to maintain high standards of software development.
- Written code in Java 8 to create the pipelines for the seamless deployments in the AWS regions and integrated the AWS resources to it.
- Served as an on-call support member, providing round-the-clock assistance to address customer-impacting issues swiftly.
- • Played a pivotal role in creating testing environments and pipelines, ensuring auto promotion, expanding testing capabilities, ensuring robustness prior to full-scale deployment, and seamless deployments for the team and dependency teams.
- • Fostered a collaborative partnership with the ASR Cloud team, facilitating feature development, integrating customer feedback, and expediting the project delivery process.
- • Created the MCMs to guarantee the model shuffling in the different regions in the form of phases, maintaining optimal traffic flow and created the alarms for monitoring latency for various models.
- • Delegated project tasks efficiently within the team to ensure uniform progression and personally managed the migration of certain regional projects from planning to production.
- • Assumed the role of Scrum Master on a rotational basis, effectively representing the team in monthly organizational meetings and driving agile practices.
- • Created IAM roles for the team and dependency teams to securely access and maintain the resources in AWS accounts based on the user attributes.
- • Used Autoscaling with EC2 instances to adjust the instances capacity for the different regions accordingly with lowest cost resulting the good performance and latency of the resources through live traffic.
- • Used AWS VPC to deploy the instances at scale in the virtual environments of different regions.
- • Created AWS Lambda throttle alarms and error alarms to monitor the live traffic of the team's main service ASRLaserService based on the code execution requests and monitored the environments changes through logs from CloudWatch.
- • Deployed the models through Rembrandt with day to day updated model versions to maintain the latency of the service in the different regions.
- • Monitored the deployments of the model profiles and the service deployments through CodeDeploy in AWS.
- • Skilled in leveraging agile tools like SIM & JIRA for effective project management, tracking and team collaboration.

4g IT Info Tech**Software Engineer Intern****Hyderabad, TG, India***June 2019 - November 2020*

- Involved in various phases of Software Development Life Cycle (SDLC) such as requirements gathering, modeling, analysis, design, development, and testing
- Integrated MySQL database into the application, designing efficient database schemas and implementing SQL queries to store and retrieve data accurately and securely.
- Oversaw the management of project tasks as a JIRA Manager, ensuring the progression and integration of service.
- Worked closely with the QA team to track and resolve defects, ensuring a high-quality software delivery.
- Used Micro service architecture, with Spring Boot based services interacting through a combination of REST and Apache Kafka message brokers.

- Worked on AWS services to deploy static websites and dynamic Web Apps on EC2 using Elastic Beanstalk and Elastic Container Service-Docker and Kubernetes.
- Experienced in Splunk development - Splunk search language, Splunk Web Framework, simple xml, alerts configuration, report building, custom dashboard building and data modelling.
- Utilized comprehensive web technologies, including HTML5, CSS, & JavaScript, to construct and refine front-end design and functionality.
- Experienced in implementing SOAP-based communication between different applications and systems, ensuring secure and reliable exchange of data.
- Hands-on experience in developing AWS cloud formation templates and setting up Auto scaling for EC2 instances and involved in the automated provisioning of AWS cloud environment using Jenkins.
- Created unit tests using Java JUnit, ensuring the robustness and reliability of the modules developed.
- Developed scalable Java/J2EE modules with MVC architecture, ensuring organized codebase within the Eclipse IDE.
- Managed version control and project collaboration using Bitbucket, ensuring seamless code integration and deployment across teams.

PROJECT EXPERIENCE

ONLINE MOVIE TICKET BOOKING WEBSITE

Remote

Student

August 2019 - November 2019

- Developed an automated, web-based cinema ticket booking system to facilitate efficient online transactions and eliminate the need for physical queuing.
- Implemented the application in PHP, with a MySQL database for backend data management, ensuring secure and reliable ticket processing.
- Designed a user-friendly interface with HTML, CSS, and JavaScript, ensuring cross-browser compatibility and responsive design for optimal user experience.
- Integrated an SMTP server for email notifications and an SMS API for immediate booking confirmations, enhancing real-time user communication.
- Employed XAMPP for local hosting and testing, simulating a live server environment to rigorously test system functionalities before deployment.
- Continuously iterated on user feedback to plan future enhancements, including a redesigned homepage and an expanded bank-to- user payment facility for improved accessibility and convenience.

IDENTIFICATION OF FAKE USERS AND SPAMMERS ON SOCIAL MEDIA

Remote

Student

January 2020 - April 2020

- Social networking sites engage millions of users around the world. The prominent social networking sites have turned into a target platform for the spammers to disperse a huge amount of irrelevant and deleterious information where millions of people interact. This project can detect the fake users on social media and can detect malicious content.
- Led the development of a system to detect fraudulent activities on social media, particularly focusing on Twitter, utilizing Python, Django, and MySQL.
- Devised algorithms for analyzing tweet content, user behavior, and network interactions to identify spammers and fake users.
- Developed a user interface resembling Twitter using Django to facilitate the management of tweets and user accounts, including spam and fake account detection.
- Conducted comprehensive testing to validate the effectiveness of spam detection methods, resulting in the successful identification and categorization of spam based on content, URL analysis, and user behavior.
- Implemented various machine learning techniques for predictive modeling and trend analysis to anticipate and counteract spam activities.

EDUCATION

University of North Texas

Master's, Computer and Information Sciences

January 2021 - May 2022

GPA: 3.75

Lakireddy Bali Reddy College of Engineering

Bachelor's, Computer Science & Engineering

June 2016 - September 2020

GPA: 8.8

CERTIFICATIONS

- Tricentis Tosca Fundamentals- Automating web application testing (AS1) - 2024
- Tricentis Tosca Fundamentals – Optimizing test automation with centralized test data (AS2) - 2024.
- Database Management (ELITE) by NPTEL - 2018.
