

VASAVI KANDULA

SQL / POWER BI DEVELOPER

USA | +1 (616) 325-4201 | Email: kavasavi@myworkmails.com | [LinkedIn](#)

Professional Summary

Results-driven SQL and Power BI Developer with around 3 years of experience designing data pipelines, developing enterprise dashboards, and automating ETL solutions across financial and healthcare domains. Adept at building SQL queries, SSIS packages, and Power BI models that transform raw data into actionable insights. Strong expertise in data modeling, DAX expressions, T-SQL optimization, and visual storytelling, improving decision-making accuracy, compliance, and time-to-insight for executives.

Professional Experience

SQL / Power BI Developer, Tata Consultancy Services, USA

May 2025 – Present

- Designed and developed enterprise-grade Power BI dashboards and SQL-based reporting solutions to visualize financial and operational metrics from ERP, CRM, and HRMS systems, reducing report turnaround time by 75% and empowering leadership with real-time decision insights.
- Engineered complex T-SQL stored procedures, functions, and triggers to automate data extraction, aggregation, and cleansing of high-volume datasets (>10M records), improving query efficiency by 45% and data consistency across multiple environments.
- Built ETL frameworks using SSIS and Azure Data Factory to migrate and transform heterogeneous data (SQL, flat files, SAP, and cloud APIs) into structured data marts, ensuring 99.9% data reliability and adherence to business transformation logic.
- Implemented data modeling architectures including star and snowflake schemas, fact/dimension tables, and surrogate keys to support self-service BI, reducing dependency on IT teams for ad hoc analysis by 60%.
- Designed and configured dynamic Power BI dashboards with advanced DAX calculations, KPIs, and Power Query transformations, enabling executives to track revenue trends, utilization rates, and variance analysis across departments.
- Developed Row-Level Security (RLS) and user role hierarchies in Power BI and SQL to meet data governance and compliance requirements under GDPR and HIPAA frameworks.
- Optimized ETL performance and SQL queries by implementing indexing strategies, caching mechanisms, and parallel execution—reducing nightly data-load cycles from 5 hours to under 1 hour.
- Deployed reports using CI/CD pipelines in Azure DevOps with automated testing and version control, ensuring zero regression during Power BI and database updates.
- Partnered with business stakeholders to define KPIs, validate reporting logic, and implement data validation frameworks using SQL scripts and Power Query checks, improving overall data accuracy by 98%.

SQL Developer / BI Analyst, IBM, India

July 2021 – July 2023

- Designed and optimized SQL Server and Oracle-based database systems supporting corporate finance, supply chain, and HR reporting needs, reducing manual reporting efforts by 60% through automated ETL and reporting workflows.
- Developed stored procedures, triggers, views, and user-defined functions to streamline data preparation for analytical reporting, improving database performance and ensuring faster response times across production workloads.
- Created and deployed Power BI dashboards and SSRS reports integrating financial, sales, and logistics KPIs, giving leadership teams real-time insight into business performance across global units.
- Built ETL workflows using SSIS and Python scripts to extract data from SAP, Oracle, and Excel sources, apply transformations, and load into SQL Server data warehouse, achieving 100% audit-traceable data lineage.
- Implemented data quality frameworks and error-logging mechanisms within ETL processes to detect anomalies, missing values, and schema drift, maintaining 99.7% data accuracy across multiple reporting environments.
- Collaborated with cross-functional teams to design logical and physical data models, including star and snowflake schemas optimized for Power BI and Tableau, reducing report latency by 35%.
- Automated data refresh schedules, incremental loads, and job dependency tracking in SSIS and SQL Agent to maintain daily synchronization between source and destination systems.
- Applied Python and Pandas for pre-processing and statistical data profiling, generating anomaly detection scripts that improved ETL data validation efficiency by 40%.
- Worked closely with compliance and IT audit teams to implement role-based access controls, encryption, and data masking in SQL databases, achieving 100% compliance with SOC 2 and internal audit standards.

Technical Skills

- Databases:** SQL Server, MySQL, PostgreSQL, Oracle DB, Azure SQL
- ETL Tools:** SSIS, Informatica, Alteryx, Azure Data Factory, Talend
- Reporting & Visualization:** Power BI (DAX, Power Query, Row-Level Security), Tableau, SSRS
- Programming & Scripting:** T-SQL, PL/SQL, Python (Pandas, Matplotlib), R
- Data Modeling:** Star & Snowflake Schema, Fact/Dimension Tables, Data Marts
- Data Warehousing:** Azure Synapse, Snowflake, AWS Redshift, Data Bricks
- Performance Tuning:** Query Optimization, Index Strategy, Execution Plans, Caching
- Business Analysis:** KPI Design, Gap Analysis, Forecast Modeling, Executive Dashboards
- Cloud Platforms:** Azure, AWS (Athena, Glue, S3), GCP BigQuery
- Version Control & DevOps:** Git, GitHub, Azure DevOps, CI/CD Pipelines
- Security & Governance:** Row-Level Security, Data Masking, GDPR/HIPAA Compliance
- Soft Skills:** Stakeholder Communication, Analytical Problem Solving, Agile Collaboration

Education

Masters | GRAND VALLEY STATE UNIVERSITY - GRAND RAPIDS, MICHIGAN, USA

AUG 2023 - APRIL 2025

Bachelors | CHAITANYA DEEMED TO BE UNIVERSITY - HANAMKONDA, India

OCT 2020 - APRIL 2023
