

Sree Chand Nadella Full Stack Developer

sreechandnadella05@gmail.com | +1 (352) 222-3220 | Seattle, WA | [LinkedIn](#)

Summary

Full Stack Developer with around 3 years of experience in Java development, specializing in Java, Spring Boot, Hibernate, and RESTful API design. Proficient in frontend frameworks like React and Angular, with expertise in SQL and NoSQL database management. Skilled in deploying applications on AWS and Azure, designing scalable microservices architectures, and utilizing Docker for containerization. Experienced in automating CI/CD pipelines with Jenkins and Maven, with a strong focus on clean code. Familiar with Agile methodologies, version control (Git), and unit testing using JUnit and Mockito.

Technical Skills

- **Front-end Technologies:** HTML5, CSS3, JavaScript, React.js, Redux, Angular, Bootstrap
- **Back-end Technologies:** Java, Spring Boot, Hibernate, JDBC, J2EE, Node.js, Maven, Micro-services, Python, MVC Framework, RESTful APIs, Apache Kafka, Shift, Gradle, JSON
- **Database Technologies:** MySQL, MongoDB, PostgreSQL, Firebase, Cassandra
- **Tools and Technologies:** Selenium, Docker, Kubernetes, Git, Jenkins, GitHub, Agile, Scrum, JIRA, SDLC, JUnit, Postman, Data Structures and Algorithms, Swagger, Unit Testing, Integration Testing
- **Cloud Technologies:** Amazon Web Services (AWS), Microsoft Azure, Google Cloud Platform (GCP)

Professional Experience

Full Stack Developer, *BigCommerce*

01/2024 – Present | Remote, USA

- Developed a high-performance front-end with React and Redux, improving page load times by 9% through advanced state management and code refactoring, enhancing user experience and reducing bounce rates.
- Engineered a robust microservices-based architecture utilizing Java (Spring Boot), J2EE, and Spring Cloud, enabling seamless independent deployments, horizontal scaling, and modular service management across the platform.
- Optimized data persistence layers by integrating Hibernate for efficient ORM and MySQL for relational database management, improving query performance by 30% and ensuring 99.9% transactional consistency and high availability across distributed services, resulting in faster data retrieval and reduced system downtime.
- Implemented enterprise-grade security protocols with Spring Security, leveraging role-based access control (RBAC) and OAuth2 authentication, enhancing API security and user data protection, reducing unauthorized access incidents by 40% and ensuring compliance with industry standards.
- Deployed scalable containerized microservices with Docker and automated CI/CD pipelines, enabling continuous delivery and zero downtime while minimizing manual intervention.
- Leveraged Azure services such as Azure Virtual Machines for autoscaling compute resources, Azure Blob Storage for secure and scalable data storage, and Azure Functions for serverless computing, optimizing cost-efficiency by 30%, improving platform performance by 25%, and enhancing fault tolerance, reducing system downtime by 15%.

Full Stack Developer, *Maxgen Technologie*

03/2020-12/2021|Remote, India

- Designed scalable microservices-based RESTful APIs using Java, Spring Boot, and Spring Cloud, leading to a 20% reduction in response times and enhanced performance with circuit breakers and service meshes for resilience.
- Enhanced data persistence performance by 30% through advanced Hibernate and JDBC tuning, caching strategies, and database partitioning; managed MySQL and PostgreSQL databases with effective indexing, partitioning, and replication for high availability.
- Automated CI/CD pipelines with Jenkins, Maven, and Docker reducing deployment time by 40%, leveraging Kubernetes for zero-downtime deployments and implementing canary and blue-green strategies for seamless rollouts.
- Integrated secure authentication protocols (OAuth 2.0, JWT, SAML) and implemented RBAC and ABAC for robust endpoint security in line with industry standards.
- Deployed containerized applications with Docker and managed multi-node Kubernetes clusters, improving fault tolerance and scalability by 30%, while implementing advanced networking and security features, resulting in a 25% reduction in system downtime.
- Spearheaded comprehensive testing using JUnit, Mockito, JMeter, and automated UI tests with Selenium; improved code reliability and reduced production defects by 25% with microservices contract testing.
- Optimized client-server interactions by integrating JavaScript and front-end frameworks with RESTful APIs, achieving a 15% boost in performance through server-side rendering (SSR) and PWA features.

Education

Master of Science, *University of Florida*

08/2022 - 05/2024 | Florida, USA

Computer Science

Bachelor of Technology, *Vellore Institute of Technology*

01/2018 - 07/2022 | AP, India

Computer Science and Engineering
