SUMMARY

Data Analyst with 1+ years of experience in Python, SQL, Excel, and Tableau, specializing in data cleaning, EDA, visualization, and predictive analytics. Skilled in translating business requirements into actionable insights through dashboards and reports. Proven ability to collaborate with cross-functional teams and drive data-informed decisions using statistical modeling and BI tools.

SKILLS

- Programming Languages: Python, R, SQL, C, C++, Golang
- Data Tools: Excel, MySQL, Tableau, IBM Cognos
- Libraries/Frameworks: Pandas, NumPy, Scikit-learn, Seaborn, Matplotlib, SciPy
- Data Skills: EDA, Data Wrangling, A/B Testing, Statistical Modeling, Predictive Analytics, Hypothesis Testing
- Soft skills: Communication, Collaboration, Problem Solving, Analytical Thinking

EDUCATION

Master of Computer Science

GPA: 3.8/4.00

North Carolina State University Raleigh, North Carolina

August 2023 - July 2025(Expected)

Bachelor of Technology in Computer Science and Engineering

GPA: 9.23/10

SRM Institute of Science and Technology Tamil Nadu, India

June 2018 - May 2022

WORK EXPERIENCE

Jio Platforms Limited

Hyderabad-India

Data Analyst

June 2022 - July 2023

- Improved data accuracy by 15% through robust data cleaning pipelines using Python (Pandas, NumPy).
- Optimized complex SQL queries and indexing strategies, reducing data retrieval time by 25% and significantly improving overall database performance and reporting efficiency.
- Collaborated with 3+ cross-functional teams to gather reporting requirements and developed Excel-based reports and dashboards that enhanced visibility into key business metrics and supported data-driven decision-making.

CERTIFICATIONS

- Google Advanced Data Analytics Professional Certificate, 2024
- IBM Data Analyst Professional Certificate, 2024
- UC Davis Visual Analytics with Tableau Certificate, 2024

PROJECTS

Taxi Fare Estimation and Tip Prediction – NYC Taxi & Limousine Commission

- Developed a regression model to accurately estimate taxi fares using historical NYC taxi trip data, improving fare prediction reliability.
- Conducted hypothesis testing to uncover correlations between payment types and fare amounts, revealing key customer behavior insights.
- Implemented a Random Forest classifier to predict tip likelihood, achieving high model performance.
- Executed full-cycle data preprocessing, EDA, and model evaluation using precision, recall, and F1-score to ensure model robustness and fairness.

HR Analytics Dashboard Development using Tableau

- Designed an interactive HR dashboard in Tableau to visualize key workforce metrics including employee demographics, departmental distribution, and turnover rates.
- Analyzed hiring trends, performance metrics, and salary distribution across demographic variables (gender, age, education), generating insights for strategic workforce planning.
- Improved stakeholder engagement by transforming complex datasets into intuitive visualizations, enabling data-driven decisions in HR operations and compensation strategy.

Data Science Jobs Analysis using Excel

- Built an interactive salary dashboard using charts, formulas, and data validation to compare job titles and salaries across various locations.
- Analyzed job posting trends by role and month using Pivot Tables and Pivot Charts, uncovering patterns in hiring demand.
- Streamlined data transformation with Power Query (ETL) and summarized top in-demand skills, improving analysis efficiency and reporting clarity.

Modeling and Forecasting Energy Consumption in IoT Systems

- Performed exploratory data analysis and applied regression techniques (linear, polynomial, multivariate) to model the impact of environmental factors on energy usage.
- Applied time series preprocessing methods, including log transformation and differencing, to achieve stationarity and enhance forecasting accuracy.
- Implemented and evaluated forecasting models such as Simple Moving Average, Exponential Smoothing, and AR(p), delivering optimal predictive performance.
