SUMMARY

Software developer with over 2 year experience in building scalable backend systems, designing APIs, and integrating databases. Proven ability to collaborate with cross-functional teams to deliver high-quality software through efficient CI/CD pipelines in agile environments.

EXPERIENCE

Keypixel Software Solutions | Parlin, New Jersey, USA

January 2025-May 2025

Software Developer

- Contributed in the development of scalable backend APIs using **Python** and **SQL**, supporting a real-time workspace management platform aligned with distributed system principles.
- Collaborated with architects to define service boundaries and optimize API performance, contributing to a microservices-based design.
- Implemented **end-to-end unit tests**, wrote integration test scripts, and validated backend performance under load using internal tools.
- Designed RESTful services to interact with **AWS S3** and **Athena**, enabling data-driven insights for internal space tracking tools.
- Took ownership of code quality through peer reviews, adhering to clean code practices and contributing to documentation in **Confluence**.

SMS Techsoft India Limited | India

January 2021-June 2023

Software Developer

- Engineered full-stack modules using **Python**, **JavaScript**, and **MySQL**, contributing to a multi-tier enterprise web application used by internal teams.
- Integrated application layers with **Jenkins CI/CD pipelines** and participated in production deployments alongside the DevOps team.
- Wrote deployment scripts, managed environment configs, and resolved build failures during CI cycles to maintain reliable delivery flows.
- Actively participated in **Agile ceremonies**, refined user stories in **JIRA**, and delivered features within 2-week sprints.
- Collaborated with QA for **smoke, system, and regression testing**, and coordinated release handoffs to staging and production teams.

SKILLS

Programming Languages	Python, SQL, JavaScript, Java
Database Systems	MySQL, MongoDB, DynamoDB (AWS NoSQL)
Cloud Technologies	AWS
DevOps & Version Control	Jenkins, Docker, Git, Kubernetes
Software Development	API design, RESTful services, Multi-tier architecture, Agile/Scrum methodology
Testing & Quality	Unit testing, Smoke testing, Automation basics
Data Science & Machine learning	TensorFlow, PyTorch, Scikit-Learn, NumPy, Horovod, XLA, TVM
Tools & Technologies	Visual Studio Code, Visual Studio, Azure Boards/JIRA (for agile task management)

PROJECTS

Smart Workspace management system

- Built and deployed a cloud-based desk reservation system using Flask and AWS Lambda, with real-time seat tracking and dynamic allocation logic.
- Designed and implemented RESTful APIs and used DynamoDB for scalable, low-latency data operations across multiple office locations.
- Automated deployments using Jenkins pipelines and managed version control via Git with feature-based branching workflows.
- Achieved high concurrency in load tests (200+ users), reducing manual scheduling conflicts by 80% and supporting future multi-site scalability.

Scalable Inventory Management System

- Developed a backend service using FastAPI and SQL Server to handle inventory tracking, supplier data, and stock-level automation for retail systems.
- Containerized the application with Docker and deployed to Azure Web Apps using GitHub Actions for continuous integration and delivery.
- Collaborated in Agile sprints using JIRA, contributing to user story creation, sprint planning, and iterative development cycles.
- Optimized API performance by 40%, enabling smooth handling of concurrent transactions in simulated production environments.

EDUCATION

University Of Central Missouri - Warrensburg, MO, USA

Masters in Computer Science
