PROFESSIONAL SUMMARY

Data Science Intern with hands-on experience in Python, SQL, data cleaning, API integration, and visualization tools, seeking full-time opportunities in AI/ML, data science, and analytics.

EDUCATION

Master of Arts in Information Technology Management, Webster University Aug 2023 - May 2025
Relevant Coursework: Machine Learning, Advanced Statistics, Data Analysis, Artificial Intelligence, Neural Networks, Statistical Modeling, Mathematical Methods, Operational Planning, Predictive Analytics

Bachelor of Technology in Metallurgy and Materials Engineering, Indian Institute of Information Technology (IIIT) 2019 - 2023

SKILLS

Programming & Scripting:	Python, R, Bash, SQL
Data Processing & Analysis:	pandas, NumPy, PySpark, OpenRefine
Machine Learning & AI:	scikit-learn, TensorFlow, Clustering, Regression, CNNs, A/B Testing, Hypothesis Testing, Theory of Probability, Generative AI (GenAI), Computer Vision, PCA
Cloud & Big Data Platforms:	AWS (S3, Lambda, EC2), Databricks, Azure (Basic), GCP (Intro)
Database Management:	PostgreSQL, MySQL
Version Control & DevOps Tools:	Git, GitHub, Docker
Visualization & Dashboarding:	Power BI, Tableau, Matplotlib, Seaborn, Streamlit
API & Automation:	RESTful APIs, end-to-end ML pipelines, data wrangling

EXPERIENCE

Data Science Intern Jan 2023 – Jul 2023

Artfllx Design Agency, Hyderabad, India

- Assisted in **data collection, cleaning**, and **validation** of large transactional datasets using **Python** and **SQL**, ensuring data integrity and **model readiness** for downstream analytics.
- Supported **data pipeline testing** and created dashboards to visualize **model outputs**, documenting **transformation logic** and presenting insights to project stakeholders for **informed decision-making**.

PROJECTS

Network Security ML System – Built a **URL threat detection model** using **Python** and deployed it via **AWS Lambda**. Achieved 92% recall and processed over 10,000 threats daily through automated **retraining workflows**.

Movie Revenue Forecasting – Developed a **regression model** with feature engineering and **cross-validation** to predict box office success. Delivered **business insights** with 85%+ accuracy and improved **ROI prediction** for studio planning.

Customer Song Recommendation Engine – Engineered a **clustering model** for user-based song recommendations using **K-Means** and **PCA**. Boosted recommendation accuracy by 30% on a dataset of 100K+ tracks.

Crop Disease Detection with CNN – Trained a **CNN** on image datasets using **TensorFlow**. Built an interactive **Streamlit interface** enabling real-time classification for farmers with over 90% accuracy.

Healthcare Symptom Predictor – Created a **disease prediction model** using **scikit-learn**. Deployed via **Streamlit** and optimized with **feature selection techniques**, improving diagnostic precision by 18%.
