PROFILE SUMMARY

Data-driven professional with 4+ years of expertise transforming complex datasets into actionable insights. Proficient in Python, SQL, Power BI, Tableau, and cloud platforms, with proven success in problem-solving, data storytelling, and delivering scalable solutions. Extensive experience collaborating with US-based healthcare and banking clients to uncover trends, optimize processes, and deliver measurable business outcomes. Eager to learn, adapt, and contribute to transformative initiatives in dynamic environments.

EDUCATION

University of North Carolina at Charlotte

Masters in Data Science and Business Analytics; GPA: 4.0/4.0

Charlotte, USA

Aug 2022 – Dec 2023

TECHNICAL SKILLS

Programming Languages: Python (NumPy, Pandas, Matplotlib, Scikit-Learn, NLTK, TensorFlow), SQL, R, C

Databases: MS-SQL Server, MySQL, Oracle 11g, PostgreSQL, MongoDB

Tools & cloud: EPIC, SlicerDicer, COGNOS, SAS, QNXT, Tableau, Power BI, AWS, JIRA, Jenkins, Advanced Excel, PowerPoint

Data Analysis: Data Modeling, Data Mining, Data Warehousing, Data Visualization, ETL, Exploratory Data Analysis, Statistics, Predictive Analytics, Market Mix Modeling

Certifications: AWS certified Cloud Practitioner, Lean Six Sigma Green Belt

EXPERIENCE

Data Analyst

April 2024 – Present

MaineHealth

- Performed multivariate regression analyses using Python (Pandas, NumPy) and R to identify patterns in clinical and operational metrics, driving actionable insights and optimizing resource allocation by 15%.
- Designed data validation frameworks using SQL and statistical sampling methodologies, improving data accuracy by 25% and ensuring compliance with organizational standards.
- Developed interactive dashboards in Power BI with advanced DAX formulas, reducing manual reporting time by 40% and enabling real-time tracking of KPIs for senior leadership.
- Streamlined ETL workflows by utilizing Python, SQL, and NoSQL databases, integrating datasets from AWS S3 storage and ensuring reconciliation controls, which improved data reliability by 30%.
- Partnered with data engineers to build scalable BI systems using Redshift and DynamoDB, increasing system concurrency and enhancing cross-departmental analytics accessibility.
- Created SQL-based analytical queries and ad hoc reports tailored to stakeholder requirements, reducing data retrieval time by 25% and supporting informed decision-making.
- Automated data aggregation processes through Python scripting, achieving a 50% increase in operational efficiency and eliminating redundant manual tasks.
- Built end-to-end data pipelines on AWS (S3, Glue, Redshift, Lambda, DynamoDB), reducing data processing latency by 35% and enabling real-time analytics capabilities.
- Defined and tracked program success metrics using Power BI and Excel, aligning data analysis with strategic objectives and contributing to improved project outcomes.
- Delivered impactful data-driven insights using Power BI, QuickSight, and storytelling techniques, enabling leadership to make informed strategic decisions.

Data Science Intern

Jan 2023 – Dec 2023

University of North Carolina at Charlotte - Sports Analytics

- Developed a predictive model using machine learning techniques to forecast athlete performance with 95 percent accuracy.
- Employed advanced statistical models, including regression and clustering to assess player strengths, weaknesses, and overall contribution to the team's performance.
- Utilized SQL to extract and analyze data from various sources, including practice logs, competition results, and training metrics.
- Employed Tableau to convey data-driven insights, effectively communicating key findings to coaches and athletes.
- Delivered data-driven insights in multiple team meetings, influencing a training strategy shift that led to a 10% increase in team performance and enhanced athlete development.

Teaching Assistant

Aug 2023 – Dec 2023

University of North Carolina at Charlotte

Charlotte, NC

- Assisted professor in delivering lectures on strategic business analytics topics, utilizing data analytical tools to enhance understanding.
- Organised and Graded student assignments, providing feedback, and conducting office hours, focusing on the application of statistical concepts and machine learning techniques.

Data Analyst

Dec 2021 – May 2022

Zemoso Technologies

- Enhanced A/B testing methodologies to improve feature evaluation, optimizing patient scheduling processes and contributing to a 15% increase in user satisfaction through targeted data analysis and statistical significance calculations.
- Developed ETL workflows with Informatica and SSIS, which eventually improved integration of data by almost 25% from different sources and helped reduce inconsistency.
- Created complex visualizations in Tableau to support strategic decisions in patient management, resulting in a 20% improvement in early intervention strategies.
- Utilized SAS to perform advanced statistical analysis and predictive modeling on patient outcomes data, which identified key risk factors and contributed to a 10% improvement in patient management strategies.
- Produced interactive dashboards using BI tools to visually translate complex data into actionable insights, driving a 20% increase in early intervention for high-risk patients.

Programmer Analyst

Jan 2019 – Dec 2021

Cognizant Technology Solutions

- Analyzed and processed large-scale datasets representing millions of transactions using SQL and Python to identify patterns and anomalies, contributing to fraud detection and risk mitigation strategies while maintaining a low false-positive rate.
- Proficient in using SQL databases (MySQL, PostgreSQL) for structured data management and skilled in integrating and extracting data from various sources using APIs.
- Competent in managing and analyzing large data sets with Data Warehousing Tools such as Google BigQuery, enhancing data processing capabilities for complex financial analyses.
- Developed and managed credit metrics dashboards in Tableau, resulting in a 20% improvement in credit risk management and strategic portfolio decision-making.
- Engineered and deployed interactive Tableau dashboards, showcasing key banking KPIs, leading to a 40% increase in user engagement and efficiency in financial decision-making processes.
- Extracted relevant customer data from financial databases, CRM systems, and online platforms to analyze and visualize factors contributing to customer churn, enabling stakeholders to gain actionable insights from key metrics and patterns.
- Implemented data analysis and data science techniques to create rules for fraud prevention in account opening, monitoring trends and suspicious activities to maintain a low false positive rate.
- Conducted thorough reviews to verify and identify potential identity theft, detecting and preventing financial crimes, policy violations, and suspicious situations to mitigate and recover losses.

PROJECTS

Targeted Marketing Campaign Development on AWS Cloud | Python, AWS, Pandas, Lambda, Redshift

- Designed & Implemented cloud data pipelines (S3, Glue, Redshift), performed EDA & customer segmentation (SageMaker, EMR, K-means), built cross-selling models (Personalize), automated training (Lambda), monitored performance (CloudWatch, DynamoDB, Quick Sight), delivered actionable insights to stakeholders.
