

EDUCATION

MS Health Informatics (accredited by CAHIIM), Indiana University Indianapolis	01/2024 – present
Bachelor of Dental Surgery, Panineeya Institute of Dental Sciences	2017 – 04/2023 India

PROFESSIONAL EXPERIENCE

Population Health Intern, Netrin Health	present
Currently working as an intern at Netrin Health, where I focus on population health analysis by identifying care gaps, high-risk patients, and cost drivers. I support accurate HCC coding and risk adjustment through analysis of clinical and claims data to improve RAF scoring and value-based care performance. I assist in developing reports and dashboards that help providers track outcomes, guide interventions, and optimize both quality of care and reimbursement. My work spans multiple EHR systems, including eClinicalWorks, Athena, NextGen, Practice Fusion, Medgen, and Elation Health, to retrieve, review, and code patient medical records. I apply ICD-10-CM coding guidelines to identify chronic conditions, close care gaps, and support value-based care initiatives in collaboration with care management teams.	
Clinical Services Assistant, Indiana University School of Dentistry	06/2024 – present
Supporting clinical documentation accuracy by auditing patient records and ensuring proper coding and HIPAA compliance within the Axiom EHR system. I collaborate with dentists, students, and administrative staff to verify and maintain complete documentation for inpatient and outpatient procedures. My responsibilities include reviewing CDT codes for billing accuracy, uploading and validating radiographs via MiPACS, and troubleshooting EMR-related issues. I also contribute to improving clinical workflows by identifying documentation gaps and supporting staff through training and technical guidance.	
Health Data Analysis Intern, Regenstrief Institute	05/2025 – 08/2025
Contributing to a study investigating how the availability of Health Information Exchange (HIE) data affects clinician decision-making in emergency department (ED) settings. Responsibilities include extracting and analyzing patient encounter data using tools such as SAS, identifying patterns in HIE access, and comparing the availability and relevance of HIE data versus internal EHR records. Perform descriptive and inferential statistical analysis to assess relationships between HIE use and patient or visit characteristics. Collaborated with clinical informatics researchers to translate findings into visual summaries and reports that support improved data accessibility and integration in ED workflows.	
Dentist, Panineeya Institute of Dental Sciences	04/2022 – 04/2023
Performed over 500 comprehensive oral examinations, diagnosing and treating various dental conditions with a focus on patient care. Conducted advanced procedures such as root canals, restorative treatments, and surgical extractions, improving patient outcomes. Engaged in community oral health initiatives to raise public health awareness and promote preventative care.	

SKILLS

- Technical skills: SQL, SAS, Python, R, JAVA, JSON, REST API, XML, HTML, NodeJS, Java, Angular, Data Analysis and Visualization, Microsoft Office, Health IT Evaluation
- Tools: JupyterLab, PyCharm, PhpMyAdmin, PowerBI, R Studio, Tableau, GitHub, Axiom, MiPACS
- Medical Terminologies: ICD-10, CPT, HL7, SNOMED, LOINC, RxNorm, FHIR
- Clinical Skills: Chart Review & Education Support, Data Quality Assurance, medical terminology, Clinical Procedure Assistance, HIPAA Compliance
- EHR Systems: OpenEMR, OpenMRS, MiPACS, Axiom, PACS, eClinicalWorks, Athena, NextGen, Practice Fusion, Medgen, and Elation Health

COURSES

Clinical Informatics	Security and Privacy Policies and Regulations for Health Care	Applied Statistics
Medical Terminologies	Project Management	EHR Systems
	Clinical Decision Support Systems	

PROJECTS

Clinical Decision Support System for Appendicitis Diagnosis – OpenMRS	01/2025 – present
Developing a CDSS within OpenMRS to improve diagnostic accuracy for appendicitis in emergency triage, integrating Alvarado scoring to support structured clinical assessments and imaging decisions. Currently conducting an implementation evaluation using the CFIR framework to assess factors such as intervention characteristics, inner setting, and user readiness, with the goal of understanding barriers and facilitators to adoption and informing system refinements.	
ETL Pipeline for FHIR API Integration	12/2024
Developed an ETL pipeline using Python to streamline healthcare data exchange through FHIR APIs. Extracted and transformed patient data, addressed inconsistencies, and mapped parent-child SNOMED CT concepts for improved interoperability. Loaded processed data into target APIs for seamless integration. Created visualizations to analyze trends and developed a project website featuring BPMN and use case diagrams. Implemented robust error handling and best practices in API interaction to enhance data compatibility across systems.	
Analyzing Global Trends in Cancer Mortality and Patterns in Cancer Metastasis	12/2024
Analyzed global cancer mortality data (1990-2016) to identify trends, disparities, and patterns across regions and cancer types. Applied descriptive statistics, visualizations, and inferential tests (ANOVA, Chi-square) to examine correlations between cancer types and geographic locations. Developed regression models to predict future mortality rates based on socio-demographic factors and temporal patterns. Findings provided insights into global cancer trends, resource allocation, and potential cancer co-occurrence.	
Project Management – Evaluation of Intraoral Camera Effectiveness	04/2024
Evaluated a project integrating Intraoral Cameras in dental practices, achieving a 15% improvement in treatment accuracy and a 20% reduction in diagnostic errors. Managed cost analysis, communication and work plans, procurement, and team training, ensuring a positive cost-benefit ratio and enhanced patient satisfaction.	

CERTIFICATES

- Microsoft Power BI	- Basic Life Support Provider - AHA	- Radiology Permit - INDOH
