Summary

Data Scientist with 2.5 years of hands-on experience designing, developing, and deploying scalable machine learning models across cloud platforms (AWS, Cloudera, IBM Cloud) and big data ecosystems. Proficient in Python, SQL, Apache Spark, and TensorFlow, with expertise in real-time data pipelines, predictive analytics, and ML Ops workflows. Adept at translating business requirements into data-driven solutions, with a strong record of improving decision accuracy and operational efficiency. Experienced in Agile environments and skilled in delivering executive dashboards using Tableau, Power BI, and Python visualization libraries

Experience

Cloudera, USA Jun 2024 – Present
Data Scientist

- Led the design and development of predictive models for fraud detection and customer segmentation, improving decision accuracy by 28%.
- Optimized ETL workflows using Apache Spark, Hive, and SQL, reducing latency by 40%.
- Engineered features and performed EDA using Python (Pandas, NumPy), boosting model performance.
- Implemented CI/CD pipelines using Jenkins and GitHub Actions to automate model deployment and version control.
- Monitored ML models using CloudWatch, MLflow, and Cloudera SDX, incorporating automated retraining pipelines, A/B testing, and model drift detection.
- Built and deployed machine learning models with scikit-learn, TensorFlow, and PyTorch; containerized and deployed via REST APIs using Docker, Cloudera AI, and AWS Lambda.
- Presented data-driven insights via interactive dashboards in Tableau and Seaborn to stakeholders.
- Created and maintained interactive dashboards with Tableau, Seaborn, and Plotly to present key performance indicators (KPIs).

IBM, India Jan 2022 – Jul 2023
Junior Data Scientist

- Translated business objectives into machine learning use cases, increasing forecasting accuracy by 25% across finance and logistics domains.
- Designed and implemented data transformation pipelines using SQL, Apache Spark, and Python, decreasing batch runtime by 35%.
- Developed classification, regression, and ensemble learning models using XGBoost, TensorFlow, and scikit-learn
- Deployed ML models to IBM Cloud and AWS SageMaker with API integration, reducing turnaround time and human errors by 40%.
- Configured automated model monitoring systems using MLflow and custom scripts to maintain SLA compliance.
- Produced data visualizations and business intelligence reports using Tableau, Power BI, and Matplotlib.
- Mentored junior team members and interns on data wrangling, EDA, model evaluation metrics, and pipeline automation.
- Documented ML model architectures, hyperparameter tuning strategies, and deployment workflows for internal best practices.
- Participated in cross-functional hackathons, contributing to award-winning prototypes using streaming analytics and real-time dashboards.
- driving alignment between technical output and business objectives.

Skills

Programming & Scripting: Python (Pandas, NumPy, Scikit-learn, TensorFlow, PyTorch), Java, SQL, REST APIs, R, Bash
Data Engineering & Big Data Technologies: Apache Spark, Hive, Hadoop, Cloudera Data Platform, ETL Pipeline Design
Modeling & Simulation: MATLAB/Simulink, TensorFlow, Scikit-learn, XGBoost, Keras
Data Visualization & Reporting: Tableau, Power BI, Matplotlib, Seaborn, Plotly
Cloud Platforms & Deployment: AWS (S3, EC2, Lambda, SageMaker, CloudWatch), IBM Cloud, Cloudera AI, Docker, Jenkins
IoT & Edge Computing: Sensor Data Integration, Predictive Maintenance Systems, Embedded Python (Micro Python)
Databases & Storage: MySQL, PostgreSQL, MongoDB, Oracle, HDFS
Tools & Platforms: Jupyter Notebooks, Git, VS Code, Postman
Compliance & Standards: HIPAA (Data Compliance), IEEE Standards, GDPR, SDX Governance Framework

Education

Masters in computer and information sciences Dec 2024
Sacred Heart University, Fairfield, CT
