

Sri Durga Latha Kalavakolanu Data Analyst

sridurga@myworkmails.com | (848) 338 - 4242 | USA | [LinkedIn](#)

Summary

Analytical and detail-oriented Data Analyst with 3+ years of strong expertise in data extraction, transformation, and analysis across cloud platforms and relational databases. Proficient in statistical modeling, data cleaning, and feature engineering using Python and R. Experienced in designing automated ETL pipelines and creating insightful, interactive dashboards to support data-driven decision-making. Skilled in SQL, AWS, Azure, Power BI, and Tableau, with a proven ability to improve data quality, streamline workflows, and deliver actionable business insights in fast-paced, collaborative environments.

Technical Skills

- Data Analysis & Modeling:** Credit risk modeling, logistic regression, hypothesis testing, time series analysis, principal component analysis, correlation analysis, feature engineering.
- Programming Languages:** Python (Pandas, NumPy, SciPy), R.
- Databases & Querying:** SQL Server, Azure SQL Database, AWS Athena, SQL (window functions, CTEs).
- Cloud & ETL Tools:** AWS S3, AWS Glue, AWS Lambda, Azure Data Factory, Azure Data Lake.
- Data Visualization:** Power BI (DAX formulas, slicers, drill-through reports), Tableau (dynamic filters, drill-down, Level of Detail calculations), MS Excel (pivot tables, formulas, data analysis tools).
- Other:** Agile method, automated data validation, incremental data load, error handling, exploratory data analysis, data cleansing.

Professional Experience

Data Analyst, TD Bank

10/2024 – Present | Remote, USA

- Worked on credit risk modeling collaborating with risk management compliance and IT teams in an agile environment conducting requirement gathering sessions to develop models that improved loan approval accuracy by over 15% and reduced default rates.
- Extracted and optimized large-scale credit datasets from AWS S3 in CSV and Parquet formats using SQL techniques like window functions and common table expressions with AWS Athena to automate ETL pipelines increasing query performance by nearly 30%.
- Performed exploratory data analysis using correlation analysis and principal component analysis to engineer predictive features including payment history and credit utilization that significantly influenced default risk.
- Developed Python scripts using Pandas NumPy and SciPy to carry out hypothesis testing and time series analysis enhancing feature reliability and data transformation accuracy by approximately 25%.
- Implemented automated data validation frameworks with AWS Glue and Lambda ensuring high data quality and consistency which reduced manual data errors by 40% and improved ETL workflow efficiency.
- Designed interactive Power BI dashboards featuring slicers drill-through reports and KPIs utilizing DAX formulas to monitor default risk trends model performance and loan portfolio health aiding strategic risk management decisions.

Data Analyst, The Cigna Group (India)

01/2021 – 07/2023 | Andhra Pradesh, India

- Collected and cleansed years of customer health insurance claims data from internal SQL Server and external sources. Collaborated with fraud investigation IT and business teams using Agile method during requirement gathering sessions to define project scope.
- Developed optimized SQL queries and stored procedures in Azure SQL Database for efficient data extraction and transformation Designed ETL pipelines using Azure Data Factory to automate ingestion improving data availability and consistency by 20%.
- Performed exploratory data analysis using descriptive statistics correlation analysis and outlier detection to identify anomalies and suspicious claim patterns indicative of fraud within the dataset.
- Applied Python libraries like Pandas and NumPy for advanced data manipulation cleaning and feature engineering Automated preprocessing and trend analysis routines reducing manual efforts by 30%.
- Used R programming to implement logistic regression models for fraud probability scoring which increased detection accuracy by 18% Conducted hypothesis testing and validation to support model reliability and business trust.
- Conducted rigorous data validation and quality checks throughout the ETL process leveraging Azure Data Factory and Azure Data Lake Implemented incremental data load and error handling mechanisms improving pipeline reliability by 25%.
- Designed interactive Tableau dashboards incorporating dynamic filters and drill-down capabilities for real-time claims monitoring Utilized LOD calculations to provide granular fraud metrics enabling fraud detection teams to reduce fraudulent claims by 22%.

Projects

Customer Churn Prediction Model

- Built a predictive model using Python and logistic regression to identify customers likely to churn, achieving 85% accuracy and enabling proactive retention strategies.
- Automated data preprocessing and feature selection to enhance model performance and reduce manual workload by 40%.

Sales Dashboard Automation

- Developed an automated sales reporting dashboard in Power BI integrating multiple data sources for real-time insights, improving reporting efficiency by 50%.
- Implemented DAX measures and drill-through features to track KPIs and sales trends, supporting data-driven business decisions.

Education

Master of Science in Computer Science

08/2023 – 05/2025

Purdue University Northwest - Hammond, IN, USA

Bachelor of Science in Computer Science

06/2018 – 05/2022

Swarnandhra College of Engineering & Technology, Andhra Pradesh, India
