

SRI LAYA NALMELWAR

Email: nlayareddy07@gmail.com | Phone No: 347-850-4667 | LinkedIn: linkedin.com/in/laya-nalmelwar

Summary:

- Python Developer with over 6 years of experience delivering robust backend and data-driven solutions using Django, Flask, and Python across cloud and on-prem environments .
- Skilled in designing scalable REST and GraphQL APIs, integrating with relational and NoSQL databases (MySQL, PostgreSQL, MongoDB), and supporting interactive dashboards.
- Hands-on experience building data pipelines and automation scripts using Pandas, NumPy, and Matplotlib; contributed to internal ML prototypes using Scikit-learn and NLTK.
- Assisted in cloud deployments and data workflows using AWS (EC2, S3, RDS, SNS, Redshift) and Azure (Data Factory, Data Lake), including ETL support via Informatica and Python.
- Collaborated on frontend integration using HTML, CSS, JavaScript, AngularJS, and ReactJS; worked with Docker, Git, and Agile workflows for streamlined DevOps practices.
- Recognized for writing clean, maintainable code (PEP8), supporting automation efforts, and contributing to improved development efficiency through reusable tools and scripts.

Education:

Stevens Institute of Technology

Master of Science, Computer Science

Hoboken, NJ

Jan 2023 – May 2024

Coursework: Web Programming, Knowledge Design & Data Mining, Introduction to Machine Learning, Data Structures, Databases

Skills:

Languages	Python, Java, JavaScript, C/C++, Golang
Web Technologies	HTML, CSS, JavaScript, jQuery, AJAX, XML, AngularJS, ReactJS (basic), JSON
Cloud Technologies	AWS, Azure, GCP
Frameworks	Django, Flask, FastAPI, Node.JS
API & Integration	RESTful APIs, GraphQL, SOAP (basic), XML/JSON Parsing
Python Libraries	Pandas, NumPy, Plotly, Matplotlib, Seaborn, Scikit-learn, NLTK
Version Control	MVC, SVN, CVS, Git, GitHub
Databases	PostgreSQL, MySQL, MongoDB, Redis, Cassandra
ETL tools	Informatica PowerCenter, Informatica IDQ, Azure Data Factory, AWS Glue, PySpark
IDE's	PyCharm, VS Code, Eclipse, Jupyter Notebook, Spyder
Testing Tools	PyTest, Selenium, Bugzilla, JIRA, pdb, gdb
Operating Systems	UNIX, Linux, Windows, Mac OS

Professional Experience:

Tiffany & Co, Parsippany, NJ

May 2024 - Present

Role: Sr. AWS Python Developer

Responsibilities:

- Contributed to modernizing data infrastructure by building automation scripts and dashboards supporting marketing personalization and sales insights.
- Designed and developed scalable RESTful and GraphQL APIs using Python, Django, and Flask to support e-commerce operations and internal tools, improving system response times by 35%.
- Engineered end-to-end data pipelines for transforming customer and sales data using Python, Pandas, and AWS Lambda, storing processed data in Amazon S3 and Snowflake, reducing manual data handling by 15+ hours per week.
- Built interactive dashboards using Python Dash and Plotly with MySQL and Snowflake, enabling data-driven decisions and improving campaign performance by 30%.
- Implemented CI/CD pipelines using Jenkins, Docker, and GitHub Actions, automating testing with PyTest and reducing release times while maintaining consistent code quality.
- Integrated Kafka for real-time event streaming and Cassandra for high-availability, scalable data storage in analytics workflows.
- Deployed and managed microservices using Kubernetes, enhancing scalability, fault tolerance, and service orchestration.

- Developed AWS Lambda-based notification services leveraging SNS and SQS for internal alerting and transaction status updates, reducing message processing time by 50%.

Environment: Python, Django, Flask, REST, GraphQL, Pandas, NumPy, AWS (Lambda, S3, SNS, SQS), Jenkins, Docker, Kubernetes, GitHub Actions, Tableau, Cassandra, Snowflake, Jupyter Notebook, Agile/Scrum, and CI/CD processes.

DXC Technologies, India

Jan 2021 – Dec 2022

Role: Python Developer

Responsibilities:

- Developed and maintained RESTful APIs using Python, Django, and Flask to support internal services for data tracking and event logging.
- Supported backend integration and API development for a risk analytics dashboard using ReactJS, GraphQL, MySQL.
- Automated operational scripts and reporting tasks using Python, shell scripting, and XML to reduce manual effort and improve data consistency.
- Worked with relational and NoSQL databases including PostgreSQL and MongoDB, supporting queries, schema updates, and backend integration.
- Used Python libraries (Pandas, NumPy, Matplotlib) for data cleaning, exploratory data analysis, and data visualizations.
- Built distributed ETL workflows using PySpark on AWS Glue to process large-scale transaction datasets, improving data refresh times by 40%.
- Worked on configuring and validating Azure Data Factory pipelines for data ingestion into Azure Data Lake.
- Collaborated on front-end enhancements using HTML, CSS, JavaScript, jQuery, and AngularJS as part of existing product improvements.
- Hands-on experience with GraphQL API endpoints, contributing to schema adjustments and data query validation.
- Participated in regular agile sprint cycles, reviews, and bug tracking using tools such as Jira and Git.

Environment: Python, Django, Flask, REST API, ReactJS, Pandas, NumPy, Matplotlib, PostgreSQL, MongoDB, AWS (S3, RDS, Redshift), Azure (Data Factory, Data Lake), Shell scripting, HTML, CSS, JavaScript, jQuery, GraphQL, XML, Git.

Client: Cybage Software Private Limited, India

July 2019 – Dec 2020

Role: Python Developer

Responsibilities:

- Supported web application testing and security assessments, including identifying SQL injection vulnerabilities through basic web crawling techniques.
- Contributed to data analysis and documentation using Python and Pandas, generating visual insights for internal use.
- Built custom scripts and interface tweaks in Blender using Python to assist internal teams in improving workflow.
- Assisted in developing UI components using HTML, CSS, and JavaScript, and contributed to resolving data issues in ETL processes using Informatica.
- Wrote basic SQL queries and stored procedures to support reporting and backend data operations in SQL Server and MySQL.
- Developed simple backend features using Python and Django to manage content and data flow.
- Participated in automating manual processes using Python scripts and Linux shell scripting under team guidance.
- Supported basic deployment and configuration tasks in AWS, Azure environments as part of a cross-functional team.
- Applied foundational understanding of the software development life cycle (SDLC), testing cycles, and agile practices.
- Worked on internal tools with data visualization libraries such as Matplotlib and Seaborn for basic reporting.

Environment: Python, Django, Pandas, MySQL, SQL Server, HTML, CSS, JavaScript, Shell scripting, Blender (Python API), Informatica, AWS (EC2, S3), Microsoft Azure, Matplotlib, Seaborn, Linux.

Projects:

Extracting transactions using LLMs and chatbot

- Built a full-stack application using OpenAI to extract transactions from uploaded bank statements.
- Automated data validation and entry into a relational database, ensuring clean, and structured records.
- Enabled natural language interaction via a chat interface for adding and querying transactions.

Environment: Python, LangChain, FastAPI, OpenAI, ReactJS, MySQL
