Professional Summary

- A results-driven Software Engineer with over six years of experience in developing and maintaining high-performance, scalable, and secure applications across banking, fintech, and ERP domains. I specialize in backend systems using Java (Spring Boot) and Python, with strong proficiency in developing microservices, RESTful APIs, and cloud-native solutions. My experience spans the full software development lifecycle, including design, development, testing, deployment, and post-release support.
- I bring frontend development expertise using Angular 15, leveraging RxJS and Reactive Forms to build dynamic, reusable components that enhance user experience and performance. I have contributed to full-stack systems by integrating frontend features with secure, high-availability backend services in regulated environments.
- Skilled in cloud infrastructure and platform services on AWS (EC2, S3, RDS, Lambda, CloudFormation) with working knowledge of Microsoft Azure and GCP. I have led cloud migration initiatives and automated infrastructure provisioning using tools like Terraform and Helm to increase consistency, flexibility, and deployment reliability.
- Proficient in DevOps practices and CI/CD tools such as Jenkins, GitLab CI, Docker, and Kubernetes, I have streamlined development workflows, reduced manual deployment efforts, and enforced secure, automated delivery pipelines. I've used GitHub Actions and scripting languages like Python, Bash, and Shell for infrastructure automation and operational tasks.
- My backend development work also includes optimizing SQL queries and enhancing database performance across Oracle, MongoDB, PostgreSQL, and MySQL. I have implemented efficient indexing, query tuning, and caching strategies to reduce latency, support high-throughput systems, and ensure data consistency at scale in production environments.
- I've worked with monitoring and observability tools like AWS CloudWatch, Prometheus, and Grafana to ensure system health, enable proactive issue detection, and accelerate incident response. I also contribute to application security through RBAC, OAuth2, and encryption best practices to ensure regulatory compliance.
- Experienced in Agile environments, I actively engage in sprint planning, retrospectives, and daily stand-ups using tools like JIRA and Confluence. I emphasize documentation and knowledge sharing through detailed API specifications, onboarding guides, and troubleshooting documentation to improve team efficiency and cross-functional collaboration.
- I thrive in collaborative, fast-paced environments and take ownership of complex challenges, quickly adapting to new technologies and contributing to cross-functional teams to deliver impactful, production-ready software.

Skills

Programming Languages: Java, Python, JavaScript, Shell Scripting, C/C++

Cloud Platforms: Amazon Web Services, Microsoft Azure, Google Cloud Platform

Frontend & Backend: Angular, React, REST APIs, Spring Boot, Microservices, Flask

DevOps & CI/CD: Jenkins, Groovy, Gitlab CI, Docker, Kubernetes, Terraform, Git, AWS CloudFormation

Databases: Oracle, MySQL, PostgreSQL, NoSQL, MongoDB

Monitoring & Logging: AWS CloudWatch, Prometheus, Grafana

Tools & Methodologies: JIRA, Confluence, Agile, API Management, System Troubleshooting, Linux, Windows, Postman, Power BI

Professional Experience

Bank of America

Software Engineer

January 2023 - Present

- Developed and maintained full-stack enterprise applications using Angular 15 for frontend and Spring Boot (Java 17) for backend, supporting high-availability systems for payments, transaction history, and customer account workflows.
- Built reusable Angular components with RxJS, Reactive Forms, and internal design libraries, improving performance and standardizing UI behavior across platforms.
- Designed and integrated RESTful APIs to enable secure, real-time data exchange with third-party financial services like Stripe and PayPal, ensuring compliance and system interoperability.
- Implemented role-based access control (RBAC), OAuth2, and encryption protocols to enforce data security and align with internal audit and compliance standards.
- Optimized Oracle and MongoDB databases by implementing indexing, query tuning, and data modeling improvements, reducing transaction latency and improving query response times by over 40% in high-throughput environments.
- Automated CI/CD pipelines using GitLab CI and Jenkins, integrating code quality checks, unit tests, and secure deployment workflows across dev and staging environments.

- Led cloud migration and infrastructure transformation using AWS (EC2, Lambda, CloudWatch, SNS), Azure Functions, Kubernetes, and Docker; automated deployments with Helm and Terraform, enhancing infrastructure consistency, deployment flexibility, and overall uptime.
- Participated in all phases of the SDLC using Agile methodologies and JIRA, collaborating closely with product managers, QA, and DevOps teams to deliver features on schedule.
- Authored and maintained technical documentation, including API specifications, UI integration guides, and runbooks in Confluence to support developer onboarding and team collaboration.
- Provided post-deployment support, triaging incidents, conducting root cause analysis, and delivering hotfixes for production issues in critical financial workflows.

Edgeverve Systems

Software Engineer

October 2021 - December 2022

- Developed and deployed ERP modules using Python and Django to automate core business processes including inventory, finance, and HR, improving operational efficiency and data accuracy across departments.
- Created and maintained RESTful APIs using Flask and FastAPI to enable secure data exchange and seamless integration with internal systems and third-party services, enhancing application interoperability and functionality.
- Managed AWS-based deployments using EC2, S3, and RDS, and supported system operations within UNIX-based environments for secure and reliable infrastructure.
- Automated daily code refreshes with Shell scripting and Python, managed 5+ servers, and implemented Dev-Test environments, reducing deployment errors and enhancing QA throughput.
- Engineered secure backend systems with role-based access control (RBAC) and basic encryption techniques, ensuring compliance with fintech data privacy and security standards.
- Improved system performance by 50% through database indexing, query optimization, and code refactoring, resulting in faster response times, better user experience, and enhanced scalability under increased load.
- Contributed to CI/CD pipeline setup using Jenkins, integrating automated tests and deployment workflows to reduce release friction and rollback risks.
- Automated SQL data migration and backup processes using Python and Bash, improving data reliability and minimizing downtime during updates and rollbacks in Oracle SQL-based backend systems.
- Collaborated with DevOps teams to assist in implementing application monitoring and alerting using Prometheus and Grafana, improving early detection of performance issues and accelerating incident response.
- Participated in Agile processes, collaborating with QA, DevOps, and product managers to ensure timely delivery of business critical features.
- Documented API specifications, onboarding processes, and troubleshooting guides in Confluence, improving team knowledge sharing and reducing developer onboarding time.

Cognizant

Software Engineer

July 2019 - October 2021

- Developed and maintained backend services using Java and Spring Boot, implementing REST APIs to support secure, scalable features for enterprise-grade web applications.
- Built and deployed microservices on AWS using EC2, S3, and CloudFormation templates, ensuring infrastructure-as-code and enabling rapid environment provisioning.
- Designed and integrated end-to-end CI/CD pipelines with Jenkins and GitLab CI, automating build, test, and deployment workflows to reduce release time by 40%.
- Leveraged Docker and Kubernetes for containerization and orchestration of services, enabling horizontal scaling and simplified deployment across environments.
- Worked with both SQL and NoSQL databases (Oracle SQL, MongoDB) to design schemas, write optimized queries, and manage high-volume data transactions.
- Collaborated cross-functionally using JIRA and Confluence, contributing to agile ceremonies and maintaining clear technical documentation.
- Used Postman for API testing and automation, and followed secure API practices including token-based authentication and role-based access controls.
- Troubleshooted and resolved production issues in Linux/Unix environments, improving uptime and reducing mean time to recovery (MTTR).

Education

Northern Illinois University

Master's, Computer Science

K L University

Bachelor's, Computer Science
