

Sri Vidya

Data Analyst

+1 720-772-9229 | srividya@itjobtech.com | 80237-Colorado, USA | [LinkedIn](#)

SUMMARY

- Results-driven **Data Analyst** with over **3 years of expertise** in **healthcare data analysis** and compliance.
- Proven ability to lead **data optimization initiatives**, resulting in a **15% increase in productivity** through streamlined workflows.
- Proficient in **SQL** for complex data analysis and query optimization in fast-paced environments.
- Extensive experience working with **MySQL** and **Server databases** for efficient data management and analysis.
- Skilled in creating **interactive dashboards** and delivering actionable insights using **Tableau** and **Power BI**.
- Expertise in **data visualization**, **data modeling**, and **data mining** to support decision-making processes.
- Strong collaboration skills with experience in **Git** and **GitHub** for version control and project management.

SKILLS

Methodologies: SDLC, Agile (Scrum), Waterfall

Programming Languages: SQL, Python, R, PL/SQL

IDEs: Visual Studio Code, PyCharm, Jupyter Notebook

Packages: NumPy, Matplotlib, Pandas, TensorFlow, PyTorch, Seaborn, SciPy, Scikit-learn, ggplot2, Plotly

Visualization Tools: Tableau, Power BI, MS Excel, Alteryx

Cloud Technologies: AWS (EC2, S3, RDS), Azure, Databricks, Snowflake, GCP

Databases: MySQL, SQL Server, PostgreSQL, SQLite, Oracle, MongoDB, DBMS, RDBMS

ETL & Big Data Tools: Hadoop, MapReduce, Hive, Apache Spark, Pig, SSIS, Talend, Apache NiFi, Apache Kafka, SAP, SAS, SSRS

Data Analysis Techniques: Machine Learning Algorithms, Probability Distributions, Confidence Intervals, Hypothesis Testing, Regression Analysis, Linear Algebra, A/B Testing, Data Mining, Data Transformation, Forecasting & Modeling, Data Cleaning, Data Wrangling, Data Governance, Data Visualization, Data Warehousing, Association Rules, Clustering, Classification

Operating Systems: Windows, Linux, Mac

Project Management: Jira, Git

EXPERIENCE

Data Analyst

Jan 2024 - Present

State Street

USA

- Advised Agile teams, promoting sentiment analysis and adapting to the project's requirements for developing data solutions in an Agile environment using Python for data manipulation and analysis.
- Performed database operations, data retrieval, and manipulation using SQL and Python for in-depth analysis and reporting.
- Created visual representations, graphs, and statistical plots using Python libraries such as Matplotlib, Seaborn, ggplot2, Scipy, and Plotly to convey complex data insights, increasing data comprehension by 50%.
- Incorporated feedback from business partners, product owners, and data scientists to ensure data integrity and correct usage, reducing data discrepancies by 30%.
- Implemented visualizations in Power BI, providing an overview of performance indicators and critical data metrics.
- Incorporated Python with MySQL for data operations, including data cleansing, transformation, and summarization before analysis, enhancing data processing speed by 35%.
- Utilized NumPy and Pandas to perform statistical analysis on warehouse data, including regression analysis, hypothesis testing, and data visualization to identify trends and correlations.
- Maintained complex SQL queries, stored procedures, and functions to support data processing and analysis, ensuring data quality and integrity, resulting in a 20% reduction in data-related errors.
- Deployed machine learning models to reduce patient readmission rates by provided them with better care and treatment to cure based on his past medical history and prescriptions by leveraging XGBoost and Randon Forrest.
- Built a scalable data warehouse on AWS Redshift to centralize EHR, claims, prescription, and call center data, improving reporting speed by 40% and supporting real-time decision-making.

Data Analyst

May 2019 - Jul 2022

Nucleus Software

India

- Develop Reports and Dashboards using Google Analytics with end users to analyze usage patterns, the effectiveness of website changes, and the productivity of news stories and articles.
- Formed Python scripts to automate data cleaning processes, reducing manual effort by 30%.
- Employed NumPy and Pandas to clean, preprocess, and transform raw data into structured formats suitable for analysis and modeling, reducing data preparation time by 40%.
- Monitored the performance of data-related services in AWS and Azure, optimizing configurations to maintain optimal data processing, resulting in a 30% improvement in processing efficiency.
- Improved Excel models for financial analysis, reducing errors by 20% and saving 2 hours per week.
- Optimized SQL Server queries, resulting in a 15% reduction in database response times.

EDUCATION

Master in Science Information Systems, University of Colorado, Denver, Colorado

August 2022-May 2024

Bachelors in Electrical and Electronics Engineering, SRM Institute of Science and Technology, India

July 2016-May 2020

CERTIFICATION

AWS Cloud Practitioner Beginner Certification
