SUMMARY

Software Engineer with 3+ years of experience building scalable web applications using Angular, Java Spring Boot, and Node.js. Developed robust REST/GraphQL APIs and responsive user interfaces, ensuring performance and accessibility across platforms. Delivered tangible improvements in system performance and streamlined deployments using Docker, Kubernetes, and CI/CD tools.

SKILLS

- **Programming Languages:** Java, Python, TypeScript, Groovy
- **Backend & API Development:** Spring Boot, Hibernate, FastAPI, REST APIs, GraphQL, Domain-Driven Design, Clean Architecture, Node.js, Object-oriented Design
- **Frontend Technologies:** React, Angular, Tailwind CSS, Material-UI, Bootstrap, jQuery, Responsive & Accessible UI Design
- **Databases & Caching:** PostgreSQL (performance tuning, indexing, schema design), DynamoDB, Redis, Flyway Migrations, MongoDB
- **Cloud & Infrastructure:** AWS (EC2, S3, DynamoDB, EKS), Kubernetes, Docker, Infrastructure as Code, Linux/Unix Shell Scripting, Azure K8s, K8s Configurations
- **Leadership:** SDLC, Mentoring, Collaboration, Agile
- **Streaming & Messaging:** Apache Kafka, Kafka Streams
- **DevOps & CI/CD:** GitHub Actions, Jenkins, GitLab CI/CD, Blue/Green Deployments, Automated Testing Pipelines, Infrastructure as Code
- **Testing & Quality:** TDD, BDD, Spock, Cucumber, Test Coverage >90%, Automated Quality Checks, Selenium, Cypress
- **Monitoring & Observability:** Splunk, New Relic APM, Custom Dashboards, MTTR Reduction Strategies
- **Productivity Tools:** Microsoft Office Tools

EXPERIENCE

Kaiser Permanente

Jan 2024 - Present

Software Engineer

- Engineered scalable Java Spring Boot microservices and REST/GraphQL APIs (Java, TypeScript) for a healthcare data exchange platform, leveraging domain-driven design and clean architecture to ensure modular and HIPAA-compliant deployments.
- Developed responsive and accessible user interfaces using Angular and React (TypeScript), integrating Material-UI and Tailwind CSS to improve EHR usability across devices and ensure WCAG compliance for all patient-facing features.
- Optimized PostgreSQL performance by 35% for clinical and claims data through schema refactoring, advanced indexing strategies, and Flyway-based migrations, thereby enhancing real-time patient care update reporting pipelines.
- Constructed Kafka-based messaging pipelines for real-time data exchange between lab systems, insurance providers, and clinical applications, reducing manual batch processing by 50%.
- Deployed services using Docker and Kubernetes to enable auto-scaling and zero-downtime rollouts for patient portals and claims processing systems, while automating CI/CD pipelines via GitHub Actions and Jenkins to enforce audit logging and change traceability.
- Delivered cloud-native healthcare services using Java Spring Boot on AWS (EC2, S3, DynamoDB), supporting large-scale document management and medical imaging systems, and reducing response latency by 40% through efficient S3 file chunking.
- Utilized FastAPI and Python to develop internal services for patient scheduling and billing reconciliation, enhancing system reliability and reducing integration time with third-party EHR and billing systems.
- Achieved 3x faster production releases with blue/green deployments using Jenkins and GitLab, ensuring zero-downtime updates for claims and eligibility processing with robust rollback mechanisms for compliance.
- Mentored junior engineers in writing secure code for healthcare applications and integrating unit tests using Spock and Cucumber, promoting a test-first approach that reduced post-deployment bugs by 25%.

Tech Mahindra

Feb 2020 - Jul 2022

Jr Full Stack Developer

- Developed and maintained scalable web applications with React and TypeScript on the frontend and Node.js with Express on the backend, contributing to faster feature delivery and a 30% improvement in system stability.
- Enhanced website performance and load times for over 50,000 global users by optimizing React components and reducing API response times by 40%.
- Created and integrated RESTful APIs to boost efficient data exchange between frontend and backend systems by 35%, thereby improving user experience.
- Wrote comprehensive unit and integration tests using Jest and JUnit, increasing overall test coverage to 95% and cutting post-deployment bugs by 50%.
- Automated weekly reporting tasks via AWS Lambda, reducing manual effort by 45% and enabling on-demand data access for project managers.
- Streamlined deployments using Jenkins-based CI/CD pipelines, reducing deployment time by 50% and enhancing reliability through automated build validations.

- Leveraged Google Cloud Platform services to deploy web applications, achieving a 20% reduction in infrastructure costs through serverless architecture and optimized resource usage.

EDUCATION

Pace University, New York

Sep 2022 - May 2024

Master of Science, Information Systems

Jawaharlal Nehru Technological University, Hyderabad, India

Aug 2017 - Jun 2021

Bachelor of Technology, Computer Science

CERTIFICATIONS

- Informatica PowerCenter & Intelligent Cloud Services | Azure Certified Developer | Trained in (SSIS) & Reporting Tools (SSRS, Power BI)
