

EDUCATION

Indiana University Bloomington

Masters, Computer Science (GPA: 3.8)
Bloomington, Indiana

August 2023 - May 2025

Jawaharlal Nehru Technological University

Bachelors, Computer Science and Engineering (GPA: 3.8)
Hyderabad, India

August 2019 - June 2023

PROFESSIONAL EXPERIENCE

Heartland Community Network | Software Engineer

June 2025- Present

- Engineered 10+ responsive websites for local Indiana businesses using React, Node.js, and Express, incorporating secure SQL databases and Velo by Wix to deliver scalable and efficient cloud-based services.
- Pioneered a streamlined photography platform with enhanced search functionality and collaborative workspaces, leading to a 25% increase in user interaction and positive user reviews.
- Championed bi-weekly client feedback sessions using Figma prototypes, directly translating insights into actionable code changes, resolving the top three UI/UX pain points from user reviews.
- Deployed fully automated CI/CD pipelines using Jenkins and Docker, cutting down manual testing cycles by 60% and accelerating software release cadence across three projects.

Indiana University Bloomington | Software Engineer [project link](#)

January 2024 - May 2025

- Analyzed intricate datasets resulting in compelling visualizations shown during the FADS Research Showcase; these contributions empowered over 150 participants with tangible insights that drove informed decision-making regarding future projects.
- Transformed raw database records exceeding 5 million into actionable research insights—presented via interactive dashboards—that informed the direction of future research initiatives and grant proposals.
- Fashioned interactive dashboards in Tableau and Looker, translating complex data insights into actionable recommendations for non-technical stakeholders, leading to 30% faster decision-making across project teams.
- Architected a React.js frontend for a research paper platform, integrating a commenting feature that facilitated direct author feedback and a refined paper update cycle of 1 week.

Tata Consultancy Services | Software Engineer

January 2023- May 2023

- Automated Jira workflow for bug triage, routing critical issues directly to senior engineers, which led to a 95% faster resolution rate for high-priority defects and better resource allocation.
- Configured Jira Service Management (JSM) to automate bug ticket creation with pre-populated fields, which enabled the most junior member on the team to resolve more bugs than other members.

PROJECTS

Patient and Health Management System / Next.js, Django, Postman, Agile.

January 2024 - May 2024

- Led the architecture of a HIPAA-compliant patient management platform, integrating one-time password (OTP) verification and role-based access control; resulting in zero reported data breaches and a 20% faster patient check-in process.
- Constructed secure patient data management APIs utilizing Django REST framework, enabling swift data exchange between front-end and back-end systems; achieved a 60% uptime during testing phases.
- Orchestrated thorough API testing with Postman, identifying critical functionality gaps and rectifying key issues that increased system reliability for over 1,000 users within the patient management platform.
- Enhanced API testing protocols by implementing automated Postman tests via Newman CLI, reducing manual testing time by 30% and improving testing efficiency for team members by 15%.

AURA- The Emphatetic AI / LLMs, Open AI, React, ElevenLabs, Spotify APIs, Tavily

April- 2025

- Spearheaded the developed of the multi-agent emotional AI system inspired by Her, combining LLMs, emotion analysis, make journals and media curation to simulate human-like empathy.
- Led a team of three engineers in designing seven core agents for the emotional AI system, including Emotion, Journal, and Support, achieving a 95% agent uptime during system beta testing.
- Designed an intuitive React dashboard interface providing visualized insights from the emotional AI system, incorporating live agent performance metrics and user sentiment analysis for 50 users.
- Engineered an AI-driven emotional understanding module using Natural Language Processing techniques, pinpointing memory leaks, timeouts, and race conditions as key crash factors, leading to a 30% reduction in system errors.

TECHNICAL SKILLS

- Data Science & Machine Learning:** TensorFlow, PyTorch, Keras, Scikit-learn, Pandas, NumPy, NLTK, OpenCV, Clustering, Data Visualisation, Tableau, Power BI
- Programming Languages:** Python, Java, C/C++, JavaScript, TypeScript, Next.js, Linux, TypeScript, Angular, HTML, CSS, PHP, XML
- DevOps & Automation:** CI/CD, Jenkins, Git, Databricks, Hadoop, Spark, Jira, Agile, Scrum, Kanban, Infrastructure as Code (Terraform), Docker(Containerization), Kubernetes (Orchestration), Kafka(Distributed systems)
- Databases & Cloud Services:** SQL, MySQL, PostgreSQL, NoSQL, DynamoDB, MongoDB, Database Design Optimisation, AWS, Azure services
- System Frameworks & Libraries:** Django, Next.js, ReactJS, Node, Angular, REST APIs, Webpack, Material UI, Bootstrap, Tailwind CSS
