SUMMARY

4+ years of experience as a Data and BI Analyst, I have a strong foundation in data analysis, visualization, and business intelligence reporting. Skilled in transforming complex datasets into actionable insights using Python, SQL, Power BI, and Excel to enhance decision-making and operational efficiency

EXPERIENCE

*Highmark Health, **Data Analyst***

Mar 2023 - Present Responsibilities:

- Designed interactive dashboards and reports in Power BI to visualize key business metrics, performance trends, and KPIs for senior management and stakeholders.
- Built and optimized Power BI reports with advanced DAX formulas to enhance interactivity, including drill-through functionality, calculated columns, and measures for in-depth analysis.
- Leveraged Power BI's Power Query Editor to clean, transform, and merge data from various sources like SQL Server, Oracle, and Excel, preparing the data for detailed visualizations.
- Created dynamic and interactive reports using slicers, filters, and drill-down features in Power BI, allowing business users to explore data and insights in real-time.
- Optimized Power BI reports for performance by reducing query complexity, using efficient DAX calculations, and optimizing data models for faster load times.
- Implemented custom time intelligence calculations in Power BI using DAX, enabling comparisons over time (YTD, QTD, MTD) for key business metrics.
- Integrated Power BI with cloud services like Azure and SQL Azure for data connections and seamless report refresh capabilities.
- Utilized Power BI Service to deploy reports, set up scheduled data refreshes, and share dashboards with stakeholders for continuous insights.
- Conducted regular performance analysis of Power BI reports using tools like Performance Analyzer, identifying bottlenecks and areas for optimization.
- Designed Power BI reports with role-level security to ensure sensitive data was securely shared with appropriate stakeholders.
- Migrated existing reporting solutions from legacy systems such as QlikView to Power BI, enhancing report functionality and accessibility.
- Developed complex data models in Power BI using relationships, calculated columns, and measures to meet business logic and analytical requirements.
- Automated data refreshes and report generation in Power BI Service, ensuring that stakeholders always had access to the most up-to-date data.
- Created advanced data transformation logic in Power Query, applying steps like unpivoting, merging, and appending queries for effective analysis and reporting.
- Utilized Power BI's Dataflows to enable reusable data transformations and streamline the data preparation process for end-users.
- Leveraged Power BI's integration with Microsoft Excel, allowing for easy data export and integration with existing Excel-based reporting workflows.
- Collaborated with business teams to design and implement KPIs, ensuring that data visualizations in Power BI aligned with strategic business goals.

*Indium Software, **Data Analyst***

Feb 2021 - Aug 2022

- Designed SQL-based data models to extract key insights from large datasets and drive data-backed strategies.
- Developed predictive models using Python, leveraging regression analysis and machine learning algorithms for sales forecasting.
- Built advanced Power BI dashboards, providing insights on forecast accuracy, sales trends, and regional performance metrics.
- Implemented automated Excel reporting solutions, streamlining weekly performance tracking and business intelligence reports.
- Collaborated with business stakeholders to understand user requirements, providing data-driven solutions that enhanced operational efficiency.
- Conducted A/B testing to evaluate marketing and sales strategies, leading to improved business decision-making.
- Integrated cloud-based data sources, improving scalability and data accessibility across departments.
- Presented findings to leadership, explaining statistical methodologies and recommending actionable strategies to optimize performance.

EDUCATION

Indiana Wesleyan University

Data Analytics & Management • 2023 - 2024

Specialized in: Big Data, Data Mining, Ethical & Legal Aspects of Management, Financial Reporting, Decision Making

Project Lead for a student-led data services startup

New England College

Computer Information Systems • 2022 - 2023

Focus: Cloud Computing, Web Programming (PHP/MySQL), Network Communication

Hindustan University

Computer Science • 2018 - 2022

Focus: Data Structures, OS, DBMS, AI, Cybersecurity, Networking, Cloud Computing

SKILLS

Python • SQL • C • C++ • HTML • Power BI • SSIS • SSRS • Excel • SQL Server

HONORS & AWARDS

Best International Paper Presentation on Innovative Research Techniques in Computer and Digital Systems
