Summary

Professional Summary Accomplished Data Engineer pursuing a Master's in Computer Science with a 4.0 GPA, specializing in scalable ETL pipelines, cloud architecture, and machine learning. Delivered 45% latency reductions for 150,000+ users at Corizo and published research in Webology. Proficient in AWS, Kafka, and Spark, with a passion for driving data-driven innovation in fintech and urban analytics.

Education

University of Central Florida, Orlando

Master of Sciences in Computer Science

Aug 2023 - May 2025

GPA : 4.00/4.00

Vellore Institute of Technology, Amaravati, India

Bachelor of Engineering in Computer Science

July 2019 - May 2023

GPA : 3.72/4.00

Technical Skills

Programming Languages:: Python, SQL, Java, JavaScript, R, Shell Scripting

Databases:: PostgreSQL, MongoDB, CockroachDB, DynamoDB, MySQL, SQLite, Oracle, Redis)

Data Analysis & Visualization: : Pandas, NumPy, Tableau, Power BI, D3.js, Folium, Looker)

Developer Tools: : AWS (EC2, S3, RDS, Lambda, Glue), Kubernetes, Docker, Jenkins, Git, JIRA, GCP

Machine Learning & AI: : TensorFlow, PyTorch, Scikit-learn, XGBoost, Keras

Other: : ETL Pipelines, Cloud Architecture, Data Mining, Predictive Modeling, Algorithm Design, REST APIs, Hadoop, Spark, Snowflake, Django, Flask, Spring Boot

Experience

Data Engineer | *Corizo* | *Fintech Data Analytics Firm*

Feb 2022 - Jul 2023

- Architected four Kafka-based ETL pipelines using Jenkins CI/CD, Spark, and CockroachDB, slashing latency by 50% for 200,000+ users, enabling real-time fraud detection in fintech transactions.
- Developed serverless AWS Lambda workflows with SQS and DynamoDB, reducing errors by 40% and accelerating data processing by 30% for AI-driven analytics models.
- Built a D3.js and Tableau dashboard to monitor pipeline KPIs, improving debugging efficiency by 35% and supporting LLM-driven hypothesis validation for fraud detection.
- Integrated Prometheus, Grafana, and Snowflake for observability, cutting issue detection time by 65% and ensuring 99.9% uptime across distributed systems.
- Automated data workflows with Python, Pandas, and Apache Hadoop, optimizing throughput by 45% and enabling scalable processing for datasets.

Data Engineer Intern | *ExcelR* | *EdTech and Analytics Provider*

Aug 2021 - Jan 2022

- Engineered SQL and MongoDB pipelines with Spring Boot, boosting reporting throughput by 35% for 50,000+ educational analytics records.
- Automated ETL processes using Python, NumPy, and Apache Spark, achieving 99.9% data accuracy and cutting preprocessing time by 30% for predictive models.
- Deployed Dockerized microservices with Kubernetes, reducing release cycles by 60% and enhancing system reliability for cloud-native applications.

Projects

Projects Fraud Detection in Fastag Transactions | *(Python, Spark, Folium)*

Jan 2025 – May 2025

- Engineered an SVM-based pipeline for fintech fraud detection, achieving 94.3% accuracy using Apache Spark, reducing fraudulent transactions by 15%.
- Visualized geospatial trends with Folium, enhancing stakeholder decision-making by 30% for toll transaction security.

Predictive Insights into Urban Traffic Safety | *(Python, XGBoost, Pandas)*

Aug 2024 – Dec 2024

- Analyzed 500,000+ collision records with XGBoost, achieving 70.59% accuracy in identifying accident hotspots, informing urban safety policies.
- Applied regression analysis and Pandas for data-driven insights, potentially reducing accidents by 10%.

Credit Card Fraud Detection with Dynamic Thresholding | *Python, XGBoost, Scikit-learn*

Jan 2024 – May 2024

- Engineered an XGBoost-based fraud detection pipeline for 284,807 transactions, achieving 88% recall and perfect precision (1.0), reducing false positives by 37% via dynamic thresholding.
- Analyzed feature importance and visualized precision-recall curves, enhancing fintech security insights; published findings in a UCF research paper

Research Profile

Co-Authored a Research Paper | *Published in International peer-reviewed academic journal Webology* | [Research URL](#)

- Co-authored a research paper on 'Efficient Activity Classification and Clustering' using data analytics, showcasing expertise in machine learning and big data methodologies. Applied findings to optimize real-world business solutions in analytics-driven industries.
