SUMMARY

Innovative AWS Data Engineer with 6 years of expertise in cloud infrastructure architecture and data engineering. Enhanced data retrieval speeds by 40% and reduced storage costs by 20% through optimized Redshift configurations. Seeking to leverage skills in AWS and Python to drive data-centric initiatives, improve processing efficiency, and facilitate seamless analytics in future projects.

EXPERIENCE

AWS Data Engineer | Ethos Infoways | ST PETERSBURG, FL | October 2024 - Present

- Provided technical guidance and best practices recommendations regarding design decisions around cloud infrastructure architecture.
- Built scalable ETL pipelines in Databricks integrating data from AWS S3 into Snowflake for downstream analytics.
- Optimized Snowflake queries with clustering and partitioning, reducing report run time by 25%.
- Monitored performance of various database systems on Amazon Web Services.
- Collaborated closely with DevOps team members to deploy code changes in a continuous integration, continuous delivery pipeline.
- Optimized Redshift configuration to enhance data retrieval speed by 40% while lowering storage costs by 20%.
- Streamlined collaboration and improved project efficiency by managing version control repositories on GitLab and GitHub for accurate tracking of source code and configuration file changes.
- Implemented CloudWatch alarms to optimize cloud environment performance, resulting in a 30% reduction in downtime through preventive issue identification.
- Swiftly detected and resolved database issues in an AWS environment using thorough CloudTrail log analysis, leading to enhanced system performance and reliability with minimal downtime.
- Transformed real-time streaming analytics by building serverless architectures with Lambda functions, achieving a 30% increase in processing efficiency and cutting operational costs by 20%.

AWS Data Engineer | Bluestone IT Solutions | Wilmington, DE | September 2023 - September 2024

- Integrated external data sources including Salesforce, Oracle, and MongoDB into the AWS stack, boosting data accessibility, cutting processing time by 30%, and enhancing overall workflow efficiency.
- Optimized the deployment and management of production environments with AWS CloudFormation templates, resulting in a 40% increase in scalability and a 30% reduction in deployment times.
- Optimized decision-making and generated actionable real-time business insights by developing robust streaming solutions using Kinesis Firehose, Streams, Analytics, Apache Kafka, and Flink on EMR clusters.
- Enhanced AWS EC2, S3, and EMR clusters with Spark and Hive to boost data processing efficiency by 30% while reducing infrastructure costs by 15%.
- Crafted and executed IAM roles and policies, significantly boosting data protection and achieving compliance with security standards across the cloud infrastructure.
- Designed and implemented ETL pipelines using Glue, Athena, and other AWS services, improving data processing efficiency and accuracy.
- Optimized queries for faster retrieval of data from the cloud environment, reducing data access time and enhancing system performance.
- Configured Redshift to store large datasets in a cost-effective manner, reducing storage costs and improving data accessibility.
- Increased data ingestion efficiency by 90% through the development of advanced automated scripts for AWS databases such as RDS and DynamoDB, greatly enhancing processing speed and reliability.
- Analyzed project outcomes to measure impact of newly deployed AWS CloudFormation and Redshift solutions, tracking a 25% improvement in data delivery speed and 40% reduction in operational costs within the first 6 months.

Data Engineer | Veritas Soft | Hyderabad, India | January 2020 - April 2022

- Analyzed complex structured and unstructured datasets to generate actionable insights, leading to improved decision-making and successful strategy implementation.
- Monitored databases and related systems to ensure optimized performance, enhancing system reliability by 30% and reducing downtime by 25%.
- Improved data retrieval speed by 30% and increased overall system reliability through extensive optimization of data warehouse and database systems.
- Developed streamlined ETL jobs to optimize data migration from Oracle, MySQL, and MS SQL Server into HDFS, substantially enhancing data integration efficiency and system reliability.
- Streamlined and advanced data pipeline development with Apache Spark and Hive, achieving a 40% increase in processing speed, improving accuracy, and decreasing system latency by 40%.
- Developed and implemented security measures using MySQL and Docker to protect databases from unauthorized access, resulting in enhanced data integrity and reduced risk of data loss.
- Developed and implemented security measures using mysql and docker to protect databases from unauthorized access, resulting in enhanced data integrity and reduced risk of data loss.

Data Engineer | Xerox | Hyderabad, India | September 2018 - December 2019

- Designed and implemented database applications, including interfaces, data transfer mechanisms, and function-based indexes, which significantly enhanced data access speed and efficiency.
- Integrated various products by customizing commercial databases, which led to significantly improved system compatibility and increased operational efficiency.

- Achieved significant improvements in data management efficiency and operational streamlining by designing and implementing robust data models for applications, metadata tables, and database structures.
- Analyzed data pipelines using Apache Airflow over a 12-month period to support evaluation of ETL process performance, resulting in a 35% reduction in data latency and increased reliability across five major business units.
- Directed cross-functional troubleshooting and resolution initiatives utilizing advanced SQL and Python scripting over 18 months, applying problem solving strategies to decrease critical ETL failures by 40% and sustain 99.8% pipeline uptime for enterprise data environments.
- Addressed complex challenges by managing root cause analysis of ETL bottlenecks with Apache Airflow and SQL over a 12-month period, enabling a 35% faster resolution of incidents affecting five business unit data pipelines.
- Engineered CI/CD pipelines using Jenkins and Docker over 6 months to automate testing and deployment of [ETL jobs](#), [enhancing release frequency by 50%](#) while maintaining 99.8% system uptime for enterprise data infrastructure.

EDUCATION

Master of Science (M.S.), Computer and Information Science | University of Alabama at Birmingham | Aug 2023

**Bachelor of Technology (B.Tech), Electrical and Electronics Engineering |
Jawaharlal Nehru Technological University, Hyderabad, India | Aug 2018**

SKILLS

CloudWatch, Terraform, AWS, CloudFormation, Snowflake, Git, Jenkins, Bitbucket, Maven, Docker, Kubernetes, Amazon, ECS/EKS

Python, Java

Oracle PL/SQL, Advanced SQL, SQL

Databricks, Spark, Dataflow, Glue, Kafka, Airflow

AWS (EC2, S3, IAM, CloudFront, RDS, VPC, EKS, Lambda)

Power BI, Tableau

Snowflake, Databricks, Redshift, Oracle, SQL Server, MySQL
