Professional Summary

Full Stack Developer with 2+ years of experience in designing and optimizing scalable, cloud-native using JavaScript, TypeScript, React.js, Angular, and Redux for dynamic UI development. Proficient in Java, Spring Boot, and Microservices Architecture. Expertise in REST, GraphQL, and event-driven systems with Apache Kafka and RabbitMQ.

Technical Skills

Front-end Technologies: HTML5, CSS3, JavaScript, TypeScript, React.js, Redux, Angular, Bootstrap, jQuery, AJAX, DOM

Back-end Technologies: Java, Spring Boot, Spring Cloud, Microservices, WebFlux, Hibernate, J2EE, JDBC, Spring Security, Micronaut, Node.js, Express.js, MVC, RESTful APIs, Maven, Bash, GraphQL, WebSockets, API Gateway, OpenAPI, Event-Driven

Database Technologies: MySQL, MongoDB, PostgreSQL, SQL Server, Oracle, Firebase, Cassandra, GraphQL

Tools and Technologies: Git, Visual Studio Code, Log4j, JUnit, Mockito, Apache Maven, Guava, Nginx, Swagger, Postman, Apache Kafka, RabbitMQ, CI/CD, Linux, Scrum, Kanban, JIRA, Confluence, CI/CD Pipelines

Cloud Technologies: AWS (Lambda, ECS, EKS, API Gateway, S3, RDS, DynamoDB, CloudFormation), Microsoft Azure (AKS, Functions), Docker, Kubernetes, GitHub Actions, Jenkins, ELK (Elasticsearch, Logstash, Kibana), Prometheus, Grafana

Professional Experience

Full Stack Developer, Spotify

Aug 2024 – Present | Remote, USA

- Optimized a cloud-native, microservices-based e-commerce platform for Spotify using Java 17, Spring Boot 3, Kubernetes (AWS EKS), and Docker, enhancing system scalability, modularity, and transaction efficiency.
- Improved order management and real-time inventory tracking by using Apache Kafka and AWS EventBridge, implementing an event-driven architecture that reduced order processing latency by 40%.
- Integrated Stripe, PayPal, and Apple Pay for checkout experiences, securing with Spring Security, JWT, OAuth2, and Keycloak.
- Developed a dynamic, SEO-optimized frontend using React.js (Next.js 14), Redux Toolkit, and TypeScript, enhancing user engagement with faster load times and real-time updates.
- Automated deployments and infrastructure provisioning using CI/CD pipelines with GitHub Actions, ArgoCD, and Terraform, reducing deployment time by 45% and ensuring zero-downtime releases.

Full Stack Developer, Cognizant

Feb 2022 – Jul 2023 | India

- Developed a high-performance, scalable platform using Java, Spring Boot, and RESTful APIs, implementing OAuth 2.0 and Spring Security for secure authentication and authorization workflows.
- Implemented dynamic UI components using React, HTML5, CSS3, JavaScript, Bootstrap, and jQuery, enhancing user experience and enabling seamless interaction with back-end services via RESTful and SOAP APIs.
- Utilized AWS services such as Amazon S3, Amazon EC2, AWS Lambda, and AWS CodeBuild to deploy containerized applications using Docker, enabled CI/CD pipelines with Jenkins for reliable and efficient deployments.
- Built AWS CodePipeline, EKS, and Amazon CloudWatch for streamlined continuous integration, real-time monitoring, and delivery of containerized workloads, optimizing e-commerce operations hosted on AWS VPC.
- Developed batch processing using Java multithreading for order processing performance and transaction management, implemented data access layers with DAO patterns, JDBC, and integrated with Amazon RDS for database optimization.

Education

Master of Science, Illinois Institute of Technology

Aug 2023 - May 2025 | Chicago, USA

Information Technology and Management

Bachelor of Technology, MLR Institute of Technology and Management

Aug 2019 - Apr 2023 | Hyderabad, India

Electronics and Communication Engineering

Projects

Job Search API:

- Developed a RESTful Job Search API – Built a backend system using Express.js and SQLite to manage job postings with full CRUD functionality (Create, Read, Update, and Delete).
- Implemented Efficient Data Handling – Designed a structured database schema for job listings and optimized data retrieval, updating, and deletion processes.
- Enhanced API Testing & Error Handling – Conducted thorough testing using Postman, ensuring proper HTTP status codes and robust error handling for invalid requests. Scalable and Extensible Architecture – Designed the API for easy integration with frontend applications, with potential extensions such as user authentication and advanced job filtering.

Online Doctor Finder Application:

- Developed a Java-based appointment system with a MySQL backend on Apache Tomcat, handling 10,000+ transactions monthly and improving booking efficiency by 30%.
- Built an interactive UI with automated admin features, integrating seamless scheduling, payment processing, and Tableau-driven reporting, reducing manual effort by 40%.
- Implemented RESTful APIs, RBAC, and data encryption to enhance HIPAA compliance, data security, and secure doctor-patient communication, improving response times by 25%.
- Deployed on AWS (EC2, RDS) using Docker and Kubernetes, integrating CI/CD pipelines (Jenkins, GitHub Actions) and monitoring tools (Prometheus, Grafana, ELK) to ensure 99.9% uptime and reduce deployment time by 50%.
