## PROFESSIONAL SUMMARY

---

- **Data Engineer** with 5+ years of experience in designing, developing, and implementing robust data pipelines, ETL processes, and data architecture.
- Proficient in ETL/ELT tools like **DBT, Informatica, and IICS**, with expertise in cloud data warehouses such as **Snowflake, Redshift, and Synapse**.
- Experienced in **PySpark** and **Scala** for big data processing, including RDD transformations, Spark Core, Spark Streaming, and Spark SQL. Skilled in Data Frame creation and Snowflake integration.
- Strong knowledge of relational (**MySQL, SQL Server, PostgreSQL, Oracle**) and NoSQL databases (**MongoDB, Cassandra, DynamoDB**), including database design, migration, and writing stored procedures, triggers, and functions.
- Expertise in Azure data solutions, including **Azure Data Factory, Synapse Analytics, Databricks, Cosmos DB, Data Lake, and Azure DevOps**, as well as SQL database migration to cloud environments.
- Hands-on experience with **HDFS, Kafka, Spark, Hive, Sqoop, HBase, Flume, and Zookeeper** for designing end-to-end big data ecosystems.
- Experienced in data warehousing concepts like dimensional modeling, data migration, data validation, data cleansing, data profiling, and ETL processes.
- Proficient in **AWS** services, including **EC2, S3, RDS, EMR, IAM, CloudFront, CloudWatch, SNS, SES, Redshift, and SQS**. Expertise in CI/CD pipelines on AWS using Code Commit, Code Build, Code Deploy, and Code Pipeline, along with CloudFormation and AWS Lambda for automation and security.
- Strong experience in creating visualizations, dashboards, and reports using **Tableau** and **Power BI**.
- Well-versed in **Agile** methodologies (**Scrum, TDD**) using **Jira** with **SDLC** expertise from requirements gathering to testing. Strong communication and leadership skills.

---

## SKILLS

---

- **Programming & Scripting:** Python, SQL, PL/SQL, JavaScript, Scala, T-SQL, C, C++, and Shell Script.
- **Databases & Data Warehousing:** Snowflake, Redshift, Synapse, PostgreSQL, SQL Server, MySQL, Oracle, MongoDB, Cassandra.
- **Big Data & Distributed Systems:** Apache Spark, Hadoop, Hive, Kafka, Databricks, Apache Flink, PIG, Sqoop, Flume, Spark SQL, Spark Core, MapReduce, Spark Streaming.
- **ETL Data Pipelines:** Informatica, IICS, DBT.
- **Cloud Platforms:** AWS, Azure.
- **Scheduler Tools & APIs:** Apache Airflow, REST APIs.
- **Data Visualization & Analytics:** Power BI, Tableau, Matplotlib, Pandas, NumPy.
- **DevOps & CI/CD Tools:** Docker, Kubernetes, Terraform, GIT, GitHub.
- **Project Management and Operating Systems:** Jira, ServiceNow, Confluence, Windows, Linux, Unix, MacOS.

---

## WORK HISTORY

---

## **Data Engineer, 12/2023 - Current**

### **American Airlines – Dallas, TX**

- Integrated **Azure Data Factory** (ADF) with **Azure Blob Storage** to move data through Databricks for processing and then to Azure Data Lake Storage (ADLS) and Azure SQL Data Warehouse, improving data availability by 25%.
- Coordinated data transfer from **Azure Data Lake** (ADLS) to **Snowflake** staging areas using ADF pipelines and developed **SnowSQL** scripts and stored procedures for reporting and business needs.
- Created and deployed Snowflake objects, such as tables, streams, tasks, and procedures, using **Azure DevOps** CI/CD pipelines and designed views with complex joins for reporting.
- Implemented Row-Level Security (RLS) in Snowflake and created **DBT** models for transforming raw data into insights while following best practices in DBT Cloud.
- Designed and deployed **DBT** snapshots to track historical changes, performed data auditing, and developed test cases for data validation and governance, improving data accuracy by 20%.
- Developed **PySpark** and **Spark SQL** notebooks in **Databricks**, optimizing SQL scripts and reducing data processing time by 30%.
- Configured Spark Streaming to process real-time data from **Kafka** and store it in DBFS, and deployed models as Python packages and APIs with **Kubernetes** and **Docker**.
- Managed Docker container clusters with Kubernetes and worked on Big Data Integration & Analytics using **Hadoop**, **Kafka**, and **Storm**.
- Built Jenkins jobs for CI/CD pipelines and processed structured and unstructured data with **Hive** queries.
- Used **Jira** as an Agile tool for project management, and sprint planning and integrated with **Confluence** to promote team collaboration for commenting on Jira issues and updating project documentation in real time.
- Created **Power BI** dashboards for business insights and performed ad-hoc queries using SQL and PL/SQL.

## **Data Engineer, 01/2023 - 10/2023**

### **Centene Corporation, ST. Louis MO**

- Designed and implemented ETL workflows in **Azure Data Factory** (ADF) to extract, transform, and load data from multiple sources into **Azure Data Lake Storage** (ADLS), improving data ingestion efficiency by 20%.
- Developed and deployed **Azure Resource Manager** (ARM) templates for automated provisioning and management of ADLS resources, ensuring consistency and streamlined version control.
- Processed and analyzed large-scale structured and unstructured datasets using **Apache Spark** (PySpark), applying data cleaning, transformation, and ETL techniques for optimized data handling.
- Utilized **Spark SQL** to process data using Data Frames or RDDs in **Hive** Context, with transformations and actions.
- Built and optimized **PySpark**-based data pipelines in Azure **Databricks**, automating workflows using **Airflow** to enable efficient data ingestion, transformation, and exploration performance by 30%.
- Migrated on-premises **SQL Server** databases to cloud platforms like Azure **Synapse Analytics** and Azure SQL DB, ensuring data consistency, security, and performance optimization.
- Designed and implemented NoSQL data processing solutions using **HBase** with Spark HBase connector, enabling seamless external table access and efficient transformations on the Databricks platform.
- Developed machine learning models using Databricks **MLlib** and **MLflow**, evaluating performance metrics, identifying bottlenecks, and refining models for improved predictive accuracy.
- Integrated Databricks notebooks with **GitHub**, implementing effective version control and collaboration strategies for seamless tracking of data engineering workflows.
- Designed and built dynamic **Power BI** dashboards, leveraging **DAX**, Power Query Editor, and interactive visualizations to provide stakeholders with real-time insights and KPI tracking efficiency by 25%.
- Transformed raw data into business-ready formats using **Power Query Editor**, performing data cleansing, merging, and shaping from diverse sources to support enhanced reporting and analytics.

## **Data Engineer/Analyst, 11/2020 - 07/2022**

### **Infosys – Remote**

- Designed **ODS** in Amazon **RDS** for real-time transactional processing and **EDW** in Snowflake/Redshift for analytics, leveraging Star and Snowflake Schemas with **Erwin** for efficient data modeling and integration.
- Migrated **Informatica PowerCenter** code to **IICS**, reducing dataflow time by 40% while ensuring data accuracy.
- Designed and implemented ETL pipelines using **IICS**, Apache **Airflow**, and **Control-M** to orchestrate data workflows from SQL Server and AWS S3 to Snowflake and Redshift, reducing latency by 20%.
- Developed real-time ETL pipelines using **Kafka** to stream event-driven data into **AWS S3**, processing it further with **IICS** for structured data loading into **Snowflake** and **Redshift**.
- Developed AWS **Lambda** functions in Python to trigger transformations and analytics on large datasets in EMR clusters, enhancing real-time data processing.
- Performed analysis, code development, debugging, unit testing, and job scheduling to optimize ETL workflows
- Worked on AWS **Athena** and **DynamoDB** for optimized data retrieval and storage.
- Automated data processing and workflow orchestration using **Python** and Terraform/CDK for AWS infrastructure deployment.
- Collaborated with DevOps teams to automate deployment of data pipelines using AWS **IAM**, **CloudFormation**, **AWS Step Functions**, and CI/CD pipelines, improving operational efficiency.
- Developed **Scala** scripts to extract data from **Cassandra** Operational Data Store for comparison with legacy data.
- Designed and developed **Power BI** dashboards to track payment processing efficiency, credit risk metrics, and customer transaction patterns, improving financial reporting accuracy by 25%.
- Implemented **MDM** practices to maintain accurate and consistent customer information, enforcing ETL rules to safeguard data integrity.

**Data Analyst, 01/2019 - 10/2020**

**Sundram Fasteners, India – India**

- Extracted and transformed data from various sources into **Snowflake** using **Informatica PowerCenter**, ensuring efficient data integration and processing.
- Worked on **spark** core transformation and actions along with **RDD** and **Dataset API**.
- Used tools like **MapReduce** and **Spark** with **Scala** for performing operations like Clickstream Analysis and to perform Analysis on batch Data.
- Developed logistic regression models (**Python**) to predict subscription response rates based on customer variables like past transactions, response to prior mailings, promotions, demographics, interests, hobbies.
- Worked with building data warehouse structures, creating facts, dimensions, and aggregate tables, by dimensional modeling, and **Star** and **Snowflake** schemas.
- Migrated MapReduce programs into **Spark** transformations using **Scala**, improving execution efficiency by 25%.
- Building data pipelines and complex **ETL** to process external client data using **Python**, and **Spark**.
- Demonstrated expertise in writing complex **SQL** queries, stored procedures, and triggers using Oracle SQL, enhancing database query performance by 20%.
- Designed and implemented database schemas, tables, indexes, and efficient data retrieval using **Oracle SQL**.
- Optimized **MapReduce** Jobs to use **HDFS** efficiently by using various compression mechanisms.
- Developed Python scripts to find vulnerabilities in **SQL** Queries through SQL injection and permission checks.
- Created scripts to read **CSV**, **JSON**, and **parquet** files from **S3** buckets in Python and loaded them into **DynamoDB**, and **Snowflake**.
- Wrote reports using **Tableau** Desktop to extract data for analysis using filters based on the business use case.
- Performed Tableau-type conversion functions when connected to relational data sources.

---

## EDUCATION

---

**Masters:** computer science

**Saint Leo University - Florida**
