EDUCATION

University of North Carolina at Chapel Hill
Bachelor of Applied Sciences - Statistics and Analytics; Data Science Minor
Relevant Coursework: Methods of Data Analysis with R, Machine Learning, Stochastic Modeling, Healthcare Risk Analytics, Decision Analytics, Data Structures and Management, Advanced Statistics & Probability, Business Operations and Management.

Chapel Hill, NC
May 2025

SKILLS

Technology: Python, R, SQL, MATLAB, Tableau, Power BI, Google Cloud, ETLs, Microsoft Office Suite (Excel, Word, PowerPoint)
Certifications: Microsoft Excel Specialist (July 2024), Tableau Desktop Specialist (July 2024), Applied Data Analytics (Aug 2024), SQL Associate (Expected Sep 2025)

RELEVANT EXPERIENCE

Digital Technology Solutions LLC
Business Analyst Intern

Detroit, MI
Sep 2024 - Dec 2024

- Designed and automated forecasting models using Python and SQL to project staffing placements and financial performance, improving headcount allocation and planning accuracy.
- Conducted variance analysis across 30+ cost categories, uncovering key inefficiencies that drove a 15% improvement in budget utilization.
- Developed dashboards to monitor staffing timelines and vendor costs, enabling real-time tracking and faster data-backed operational decisions.
- Collaborated with finance and operations teams to reconcile 200+ vendor invoice entries, enhancing reporting accuracy and uncovering payment discrepancies.
- Presented strategic recommendations to leadership through executive-facing reports and visualizations, directly influencing resourcing and budgeting strategies.

Intel & The Recording Academy - Global Career Accelerator
Data Analyst Intern

Chapel Hill, NC
May 2024 - Aug 2024

- Developed interactive Tableau dashboards and led regional cost and energy analysis to inform Intel’s data center GTM strategy, aligning site selection with sustainability and operational KPIs.
- Defined and monitored performance indicators using calculated fields, blended data, and parameter-driven dashboards to support long-range business planning.
- Analyzed 1M+ Grammy.com user sessions with Excel (advanced formulas, PivotTables, A/B testing), uncovering behavioral patterns that improved engagement by 18%.
- Presented insights through executive-facing reports and strategic storytelling decks, driving adoption of key recommendations across digital and sustainability teams.
- Collaborated with 10+ global analysts to improve forecast accuracy by 25%, enhancing decision-making on platform strategy and market alignment.

Carolina Analytics and Data Science
Lead Data Analyst

Chapel Hill, NC
Aug 2023 - May 2025

- Built predictive models in Python and R to evaluate travel, training, and injury effects on match outcomes, enabling performance-driven coaching decisions.
- Designed dashboards in Tableau and Power BI to deliver real-time, actionable insights to technical staff and operations teams.
- Led ETL workflows across 5+ data sources to improve reliability and reduce manual processing by 30%, accelerating access to strategic insights.
- Identified performance trends and translated insights into strategy recommendations on scheduling and resource use.

PROJECTS

Fake Review Detection Using Machine Learning & Behavioral Analysis | University of North Carolina at Chapel Hill

Mar 2025

- Developed and evaluated classification models (Logistic Regression, Random Forest, SVM, KNN) in Python to detect fake Yelp reviews across 10K+ entries, achieving 89% accuracy with Random Forest.
- Engineered behavioral and textual features using Word2Vec, VADER sentiment analysis, and reviewer metadata, identifying user behavior as the strongest predictor of fraudulent activity with strategic implications for content trust.

E-Commerce Behavioral Analytics & Revenue Impact Modeling | University of North Carolina at Chapel Hill

Dec 2024

- Modeled 12K+ e-commerce user sessions using regression and logistic models to uncover behavioral patterns driving conversion value and purchase likelihood.
- Applied cross-validation and backward selection to refine models using bounce rates, exit rates, and product activity.
- Delivered data-backed recommendations to optimize user flow and increase conversion paths.

Healthcare Claims Analysis and Risk Forecasting | University of North Carolina at Chapel Hill

Dec 2024

- Forecasted healthcare expenses within a \$10M benefits budget using claims and salary data, identifying trends across PER and COBRA plans.
- Simulated risk exposure scenarios (deductibles, stop-loss) and recommended plan strategies that reduced projected high-cost claim risk by 30%.
- Built a dynamic dashboard to communicate recommendations to HR and finance teams, supporting long-term budget planning.

Operational Strategy & Process Analytics | UNC Kenan-Flagler Business School

Apr 2024

- Analyzed shift schedules, service logs, and package flow data using Python and Lean Six Sigma to identify bottlenecks in a facility serving 8,500+ residents.
- Modeled workflow scenarios in Tableau and presented findings to operations managers, recommending a bin-based retrieval system that reduced lead time by 2+ hours/day and weekly misdeliveries by 25%.
- Developed operational strategies to enhance shift efficiency, supporting long-term scalability and throughput goals.

LEADERSHIP AND EXTRACURRICULAR EXPERIENCE

Advanced Curriculum Developer, Girls Who Code at UNC

Aug 2023 - May 2025

- Designed a Python and data analysis curriculum that grew enrollment from 30 to 85+ students and onboarded 110+ volunteers.
- Led final project development, launched a YouTube channel, and organized large-scale events to support student learning and engagement.
- Organized large-scale learning events, applying program data to optimize outreach and student engagement strategy.

Treasurer, NAMI UNC

Aug 2024 - May 2025

- Managed a ~\$3,000 annual budget across 12+ mental health initiatives using Excel for tracking, forecasting, and fund allocation.
- Coordinated fundraising and post-event reporting, using data insights to optimize resource distribution and campaign performance.
