

SRINIDHI MANNE

910-447-9056 | srinidhimanne7@gmail.com | <https://www.linkedin.com/in/srinidhimanne/>

Full Stack Java Developer with 6+ years of experience delivering high-performance applications and scalable solutions. Proficient in designing user-focused web applications, optimizing cloud-based architecture, and enhancing operational workflows. Adept at aligning software solutions with business needs using modern frameworks like .NET Core, Java, React, Angular, and Azure DevOps, AWS. Recognized for implementing effective strategies to increase productivity and streamline processes in Agile teams.

Technical Skills

Programming Languages: Java, JavaScript, TypeScript, HTML5, CSS3

Frameworks & Libraries: Django, React, Vue.js, AngularJS, Node.js, Spring Boot, JUnit

Databases: Oracle SQL, MySQL, Postgres, Mongo DB, DynamoDB, SQL Server, SQLite

Cloud & DevOps Tools: Azure, Jira, AWS (Lambda, SNS, SQS, S3), Docker, Kubernetes, Jenkins, Git, GitHub

Tools & Platforms: Visual Studio, Visual Studio Code, Selenium, RabbitMQ, Kafka, WordPress, Entity Framework

Development Practices: Object-Oriented Programming (OOP), Service-Oriented Architecture (SOA), MVVM Design Pattern, Agile Methodologies, Continuous Integration/Continuous Delivery (CI/CD), Version Control, Algorithms

Testing & Automation: Unit Testing, Integration Testing, Rest APIs, Test Automation, JMeter

Professional Experience

Morgan Stanley

April 2023 – Present

Full stack Java Developer

- Architected scalable microservices using **Java and Spring Boot**, enhancing performance and modularity for enterprise banking platforms.
- Integrating **Upgraded legacy applications to Java 17**, improving runtime efficiency, security, and leveraging new features like Records, Sealed Classes, and enhanced GC.
- **Led development of Angular 17 applications** with **TypeScript, SCSS** and **RxJS**, delivering high-performance UIs for financial dashboards and operations portals.
- **Designed JWT-based authentication** and **integrated OAuth 2.0**, enabling stateless, secure user access across distributed systems.
- **Built CI/CD pipelines using Jenkins, Gradle, and Docker**, automating builds, tests, and deployments in a regulated DevOps environment.
- **Integrated Kafka and MongoDB** to enable **real-time data pipelines** for high-throughput financial transactions and analytics.
- **Developed RESTful and SOAP services** with **XML/JSON**, ensuring efficient and secure communication across internal and third-party banking systems.
- **Optimized complex SQL queries, stored procedures, and triggers** in **PostgreSQL**, reducing query latency and improving data reliability for transaction-heavy use cases.
- **Maintained 99% system uptime** by proactively **debugging and optimizing backend services**, ensuring uninterrupted access to trading and account management systems.
- **Managed a large-scale internal audit platform** at Morgan Stanley, supporting **hundreds of auditors** and ensuring **secure, scalable deployments** using **AWS ECS** and microservice architecture.
- **Improved application performance by 35%** by optimizing caching strategies, tuning microservices, and refactoring performance-critical code.
- Utilized a wide range of **AWS** services including **EC2, S3, Lambda, SNS, IAM** and **CloudWatch** to build secure event-driven and scalable cloud infrastructure.
- Collaborated with Agile teams using **JIRA, Confluence, and Slack** to ensure smooth development cycles and effective cross-functional communication.

- **Designed and developed scalable microservices** using **Spring Boot and Java 17**, integrating seamlessly with **React frontend** via secure RESTful APIs for Medicaid eligibility and internal audit platforms.
- **Built secure and responsive React components** using **Hooks, Context API, and Axios**, improving usability and performance of healthcare and audit modules.
- **Integrated third-party systems (IRS, State Employment)** to automatically verify income and eligibility for Medicaid benefits, reducing manual interventions.
- **Migrated legacy JEE apps on WebLogic to Spring Boot microservices**, enhance modularity, deployment speed, and system resilience.
- **Implemented JWT and OAuth 2.0** for stateless, secure authentication across web and mobile healthcare interfaces.
- **Optimized backend performance** using **Java 8 parallel streams, Completable Future**, and caching strategies for faster data retrieval.
- **Developed backend APIs** for doctor and patient management, ensuring **secure, efficient data exchange** compliant with HIPAA standards.
- **Used Azure Service Bus and ActiveMQ** for reliable, asynchronous communication between distributed microservices, cutting processing time by 60%.
- **Built CI/CD pipelines with Jenkins and OpenShift**, enabling automated build, test, and deploy processes across dev/test/prod.
- **Used Spring AOP and Actuator** to enable advanced monitoring, logging, and system health tracking in microservices.
- **Tested system performance** using **JMeter**, and ensured code quality via **JUnit, Mockito, and Power Mock** in the CI pipeline.
- Created **XML-to-database** mappings for smooth data ingestion and transformation during legacy data migration.

Education

Northern Arizona University - Flagstaff, US

Master's in computer and information science

Coursework: Algorithms & Data Structures, Software Engineering, Data Structures, Web Technology

Vignan Institute of technology and science - Hyderabad, INDIA

Bachelor of Science in Computer Science and Engineering

Coursework: Computer Networks, DBMS, OOPS (JAVA, PYTHON), Software Engineering
