

PROFESSIONAL SUMMARY

I'm a Python Full Stack Developer with over 3 years of hands-on experience building scalable, user-focused web applications using Python, JavaScript, and MySQL. I've improved app performance by 30% through smarter system design and optimization. One of my key achievements includes developing a cloud-based travel and food delivery platform that led to a 25% boost in user satisfaction. I'm skilled with AWS services (EC2, Lambda, S3), Docker, Jenkins, Kafka, and PySpark for delivering efficient, cloud-native solutions. I enjoy working across the full development lifecycle and collaborating with teams to align technology with real business needs.

TECHNICAL SKILLS

- **Programming Languages:** Python, SQL, HTML, CSS, JavaScript, Java
- **Technologies:** Data Analytics, Data Visualization, EDA, ETL, DSA, RDBMS, Pyspark, Unix, REST API, Fast API, Postman.
- **Frame works & Libraries:** React, Flask, Django, Matplotlib, Numpy, Pandas, pytorch, Tensorflow.
- **Reporting Tools:** Power BI, Tableau, Data Studio
- **Product management Tools:** Sharepoint, MDM, PLM, JIRA, Confluence, CRM.
- **Cloud Technologies:** AWS (Lambda, SNS, Cloud Watch, RDS, S3, IAM, EC2) Microsoft Azure.
- **Message Queuing System:** Apache Kafka, Service Bus
- **Version Control:** GIT, Bit bucket, Git bash, jira
- **Data Base Tools:** MY SQL, NOSQL
- **Security & AM Tools:** IAM Security, KeyVault, Azure AD
- **ETL & Data Pipeline Tools:** Azure Data Factory, ADB.
- **Big Data Tools:** Spark, Apache Beam, GCP Data Bricks.
- **Devops & CI/CD Tools:** Docker, Jenkins, Azure Devops, Data pipeline, CI/CD.

PROFESSIONAL EXPERIENCE**Hungeride - Founder & Python Developer****July 2023 to Present**

Python Developer – New Haven, USA

- Developed a scalable travel and food delivery app using real-world data, dynamic pricing, and optimized system design.
- Mentoring end-to-end SDLC, achieving a 25% boost in user satisfaction and market competitiveness.
- Designed and implemented a travel and food delivery application using Flask and FastAPI, integrating modules for ride booking, fare estimation, real-time driver tracking, and food delivery with a modular, scalable architecture using blueprint.
- Developed and optimized dynamic pricing models using time-window-based ride demand analysis, surge pricing algorithms, and geofencing, resulting in a 25% improvement in user satisfaction and competitive pricing.
- Built robust data pipelines to transform ride and GPS data from JSON to Parquet for analytics; integrated AWS S3 and Athena for efficient storage, retrieval, and live visualization through BI tools like Tableau and Power BI.
- Engineered the backend with SQL Server and MongoDB, leveraging SQLAlchemy for ORM, stored procedures for performance, and NoSQL aggregation pipelines for real-time driver-rider matching.
- Implemented secure authentication using OAuth 2.0 and JWT for role-based API access, ensuring secure communication across rider, driver, and admin portals.
- Created predictive models using Pandas and ride logs to monitor KPIs (e.g., acceptance rates, cancellations, on-time performance), and built churn prediction algorithms to optimize driver incentive programs.
- Led end-to-end SDLC including requirement analysis, development, testing (Pytest, HTTPX), deployment (CI/CD), and post-release monitoring using Sentry and hotfix handling.
- Collaborated cross-functionally using Agile and JIRA, aligning development with business strategy, defining epics/user stories, and integrating PLEXOS models to simulate EV fleet energy demand and optimize charging schedules.

Temenos India PVT LTD**Dec 2021 to July 2022**

Software Engineer | Research and Development-Product, INDIA

- Resolved complex issues reported by customers at a financial software company, for 8 months of hands-on experience in debugging, compliance, and backend optimization.
- Designed scalable backend systems using SQL Alchemy ORM with PostgreSQL, implementing abstract base classes for authentication, encryption, and audit logging aligned with banking regulations.
- Developed fault-tolerant services using structured exception handling, Python logging, and AWS CloudWatch for traceability and production monitoring.
- Built stateless, testable modules for credit scoring using functional programming, and created robust test suites with pytest, pytest-mock, and tox for core banking features.
- Deployed services on AWS EC2, managing configurations securely with environment variables and AWS secret manager.
- Created complex SQL queries and views for Temenos to track loan performance, while ensuring ACID compliance and converting large logs to Parquet for fast analytics and regulatory reporting.
- Contributed to Agile workflows using JIRA, participating in stand-ups, backlog grooming, and managing sprint releases for customer portals and core banking APIs.
- Contributed to Agile/SCRUM and leading sprint demos and guiding team members in debugging and performance optimization.
- Collaborated cross-functionally with product and QA teams, streamlining delivery practices and reducing duplication of effort.

Education : Masters of Science in Data Science - University Of New Haven

Bachelors in Computer Science - Bharath University
