

SRINIVASA SAI DEEPAK, VARUKOL

Software Developer || Java Developer || Full stack Developer

+1 (706) 254-2225 | deepaksrinivasa9@gmail.com

ABOUT

- With more than 3 years of professional IT experience in designing and developing Web-based and Enterprise applications using OOA, OOD, OOPS and Java/J2EE technologies in various domains.
- Adapted working with different Software methodologies (SDLC) like Agile Scrum, Agile XP, Agile Kanban model.
- Proficient in designing and developing business applications using JSP, Servlet, Java, J2EE, Threads, EJB, XML, JNDI, Hibernate and JDBC technologies on Windows and UNIX platform.
- Utilized best-practice Design patterns and Strategies to enterprise applications to reduce tight coupling, maximize performance, and reduce maintenance/extensibility risks.
- Expertise working with Java features like Lambda Expressions, Streams API, Default Methods, and Functional Interfaces.
- Contributed to build Graphical User Interface (GUI) pages by using JSP, HTML, CSS, JavaScript/TypeScript, AJAX, Angular JS, Angular 9/13/14/16, NodeJS, ExpressJS and jQuery with Standard Validations.
- Good knowledge of working with Amazon Web Services like EC2, S3, Amazon Simple DB, Amazon RDS, Amazon Elastic Load Balancing, Amazon SQS, AWS Identity and access management (IAM), AWS Cloud Watch, Amazon EBS, Amazon ECS and Amazon Cloud Front.
- Hands on with, Struts, Struts MVC, Spring, Spring MVC, Spring Boot, Spring Cloud, Spring Data JPA, Hibernate and JPA frameworks.
- Securing applications using Spring Security with different authentication/ authorization techniques includes Basic Authentication, OAuth 2.0, JWT and LDAP.
- Building and developing Micro services using Spring Boot and deploying it on Spring cloud.
- Expertise in implementing DAO layer using DAO frameworks like Spring Data JPA, Spring JDBC, Spring ORM, Hibernate and iBatis.
- Expertise on Internet applications using Web/Application Servers like Tomcat, JBoss, WebSphere and WebLogic Application Server.
- Good experience working on Databases Systems like Oracle, SQL Server, MySQL, DB2 using tools like SQL Navigator, Toad for performing SQL and PL/SQL programming and worked on NoSQL Database like MongoDB and knowledge on Apache Cassandra.
- Proficient in implementation of middleware layer using Apache Camel, Apache Kafka, Rabbit MQ server and implemented client layer using Spring AMQP framework.
- Expertise in configuring and creating application log files using Log4J to trace required application messages.
- Proficient in writing and handling SQL Queries, PL/SQL, Stored Procedures and Triggers.
- Hands-on experience working with Version control tools like GitHub, Bit Bucket, IBM Serena, and Tortoise SVN.

TECHNICAL SKILLS

Programming Languages: Java 21/17/11/1.8, J2EE, JavaScript, TypeScript, Python, UML, XML, SQL, PL/SQL, Kotlin

Databases: SQL-Server, MySQL-Server, MS SQL, PostgreSQL, Firebase, No SQL

Web Tech: HTML5, CSS3, JavaScript, TypeScript, jQuery, Bootstrap, JSON Restful, Angular

Web Services: RESTful webservices, Microservices, SOAP

Mobile Tech: Android Studio

Backend Frameworks: Spring, Spring boot, Spring MVC, Spring Security, Hibernate, JDBC framework.

Frontend Frameworks- Angular, Angular JS, ReactJS, React Native, Django

Build tools: Gradle, Maven, Docker, Jenkins,

IDE: Spring tools, Android Studio, IntelliJ, Eclipse, Jupyter Notebook

Platforms: Windows, Mac, Linux, Unix

Cloud Technologies: Amazon Web Services (AWS)

WORK EXPERIENCE

Software Developer, Java

August 2023- Current

Sunlight Technologies, GA, USA

- Integrated the ERP Integration microservice with the Spring Framework using Dependency Injection, connecting critical services like Invoicing, Receipt, and Payment, which enabled real-time cash flow tracking, improving financial visibility across the client's organization.
- Streamlined the build and deployment process by participating in application deployment using Maven, incorporating continuous integration and automated testing, which reduced deployment time and minimized build errors.
- Developed a user-friendly web application using the Angular Framework to visualize data from invoicing, receipt, and payment services. This solution, following the MVC design pattern, improved access to payment information, enhancing decision-making for finance teams.
- Designed interactive and responsive UI components in Angular with drag-and-drop functionality, and real-time data visualization through charts, resulting in reducing user navigation time and improved data presentation for key stakeholders.
- Enhanced user experience by creating visually appealing GUI interfaces using HTML, CSS, and TypeScript, ensuring the real-time display of cash flow data.
- Developed the DAO layer with Spring Data JPA for accurate data retrieval across services, ensuring real-time and consistent access to invoicing, receipt, and payment data, improving data accuracy.
- Optimized data retrieval using SQL and JDBC prepared statements for filtering, sorting, and advanced querying, which reduced query execution times by 40%, significantly improving the performance of data-handling services.
- Built and deployed RESTful web services with Spring Boot, providing efficient data handling and seamless interoperability with external clients, enhancing integration with applications built on JavaScript and JSON.
- Deployed ERP Integration microservices on Apache Tomcat Server and Spring Boot Embedded Server, improving scalability, accessibility, and reducing infrastructure costs by 20% through automated deployment scripts and version management.
- Utilized Amazon Web Services (AWS) to move the application on to cloud platform for better reliability, availability, scalability, and accessibility.
- Optimized database management using Amazon RDS and AWS Dynamodb, improving relational and NoSQL databases performance, and reducing downtime for the ERP Integration microservices.
- Leveraged Amazon EC2 instances to dynamically scale the microservices based on demand, resulting in improvement in system scalability and reliability.
- Exposed RESTful APIs through Amazon API Gateway for seamless integration with external applications, enabling faster service consumption and improving client satisfaction.
- Deployed containerized workloads using Amazon EKS for the ERP Integration microservices, ensuring high availability and increasing deployment speed by 25% through automated orchestration.
- Implemented secure network isolation with Amazon VPC, enhancing the security of the ERP Integration microservices and AWS resources, minimizing security breaches.
- Automated CI/CD pipelines with Jenkins and Docker, reducing manual interventions, improving testing efficiency, and ensuring consistent and reliable application delivery, cutting deployment time by 35%.

Environment: Java (JDK 17), J2EE, HTML, CSS, JavaScript/TypeScript, Angular, jQuery, JSP, Spring Core, Spring MVC, Spring Boot, Spring Data, Spring Batch, JSP, Hibernate, Servlet, JDBC, Web services, RESTful, Microservices, MVC design patterns, UML, XML, JNDI, Maven, Java Beans, Jenkins, GitHub, SQL, MySQL, AWS, S3, EC2, AWS CloudWatch Spring Tool Suite, JIRA, Agile/Scrum Methodology

Java Developer

July 2019 – July 2021

Prime Soft Solutions Inc, Hyderabad, India

- Developed the Policy Management system's APIs, defining data models, and utilizing MVC design patterns to ensure modularity and scalability.
- Designed and developed an intuitive UI using Angular, HTML, CSS, and JavaScript, enabling users to seamlessly create, modify, and manage policy data. This resulted in an increase in user efficiency and improved overall user satisfaction.
- Implemented dynamic, interactive features for policy management with Angular, including real-time validation and CRUD operations, reducing manual input errors by 20% and enhancing user experience.

- Utilized Spring MVC and RESTful APIs to enable seamless communication between the front end and back end, resulting in faster policy processing and reducing response times.
- Architected microservices using Spring Boot, promoting a modular architecture for policy-related functions like creation and validation, improving scalability and simplifying future feature additions.
- Optimized database access through Spring Data JPA and JDBC, ensuring efficient handling of policy data with dynamic querying and sorting capabilities, which reduced database interaction time.
- Developed a policy creation microservice with built-in validation, ensuring seamless integration with the Rule Engine for real-time rule enforcement, improving adherence to business policies.
- Enhanced system scalability and performance through Spring Cloud load balancing strategies, ensuring optimal performance during high-traffic periods, and improving system reliability by 25%.
- Implemented robust security measures with Spring Security to enforce role-based access control (RBAC), securing sensitive policy information and preventing unauthorized access, improving overall data security.
- Automated testing and deployment using Junit, Mockito, and Jenkins, which streamlined the development process and reduced testing time, ensuring reliable and high-quality application delivery.
- Implemented CI/CD pipelines with Jenkins and Docker, automating the build, testing, and deployment process, reducing deployment complexity and minimizing human error in production environments.
- Optimized version control with Git, ensuring efficient collaboration, traceability of changes, and a reduction in merger conflicts.

Environment: Java, JDK, J2EE, HTML, CSS, Angular, NodeJS, XML, JSON, AJAX, JQUERY, Spring, Hibernate, MVC Design Patterns, WebSphere Server, MySQL, JMS, JNDI, Ant, Eclipse IDE, UML, XML, JIRA, GitHub, Log4j, LINUX

Software Developer Intern

May 2019

– June 2019

Prime Soft Solutions Inc, Hyderabad, India

- Selected and implemented AGILE development practices according to the application requirements for every project.
- Designed and developed front-end web applications with HTML, CSS3, JavaScript, and TypeScript.
- Used Angular as a framework to create single-page applications (SPA) which can bind data to specific views and synchronize data with the server using LESS, Bootstrap, and Angular.
- Implemented responsive web design using Bootstrap to ensure compatibility across different devices and screen sizes.
- Developed various DOMs in Angular and utilized them to manipulate the web interface based on the requirements.
- Applied CSS and SASS for styling the application.
- Utilized TypeScript for form validations, creating interactive web pages, and event handling.
- Implemented Java/JEE technologies for application development in various layers of projects.
- Developed functional test cases for Integration and Fundamental testing, and regression testing using Junit.

CERTIFICATIONS

Hacker Rank Java Certification

Completed online certification course in Java concepts offered by Hacker Rank.

Python Data Structures

Completed online certification course in Python data structures offered by University of Michigan rendered by Coursera.

EDUCATION

University of Georgia, Georgia, USA (*Master of Science, Computer Science, CGPA: 3.5/4.0*)

August 2021 – May 2023

Jawaharlal Nehru Technological University, India (*Bachelor of Technology, CGPA: 7.5/10*)

July 2017 – June 2021
