PROFESSIONAL EXPERIENCE

Sports Excitement - Data Analyst, Remote

Jan 2025 – Present

- Designed and maintained scalable data pipelines to monitor user behavior across the pre-launch platform, enabling tracking of key engagement metrics like session time and feature clicks. This analysis directly influenced prioritization of 5+ core features, improving projected user retention by 18%.
- Created dynamic **Power BI** dashboards and **SQL** reports to visualize KPIs of user sign-ups, active sessions, and ad engagement, providing real-time insights to stakeholders. These dashboards supported data-driven decisions that contributed to a 25% increase in projected ad revenue.

Texas Analog Center - Research Assistant, Dallas, Texas

Sep 2023 – Dec 2024

- Applied Weibull Distribution modeling and data visualization using **Python (SciPy, Numpy, Matplotlib)** to analyze test data, predicting device lifetime characteristics resulting in a 20% reduction in data processing time.
- Optimized data processing pipelines and workflows increasing equipment uptime by 37%.

Indian Institute of Technology (IIT) - Project Analyst, Chennai, India

Jan 2022 – Nov 2022

- Identified root causes of persistent machine failures by analyzing breakdown logs in **Python**, driving \$2M in projected annual savings for a leading tire manufacturer.
- Built **Power BI** dashboards for cost and performance insights, directly influencing a \$40K strategic investment in semiconductor testing equipment.
- Leveraged **Python & SQL** to uncover user behavior patterns, resulting in a 95% boost in safety compliance.

Rane Brake Lining Ltd - R&D - Senior Engineer, Chennai, India

Jul 2018 – Sep 2021

- Developed and presented **Power BI dashboards** integrating multi-source data to monitor KPIs, driving a 15% productivity boost by improving equipment availability from **80% to 91%** through reduced repair times.
- Conducted **market research** and competitive analysis on braking systems using Excel and secondary research tools, enabling R&D and marketing teams to refine product positioning and address key performance gaps.
- Streamlined reporting by automating **Excel workflows** in Macros and **Power Query (ETL)**, saving 550Hrs annually.
- Led a quality improvement initiative by automating repetitive tasks, reducing test cycle times by 20% annually.

PROJECTS

SPACEX API End-to-End Data Pipeline for API Ingestion & Transformation

- Developed a fully containerized ETL pipeline to extract SpaceX launch data via public API, staged it in **AWS S3**, load into **Redshift**, and transform using **Dbt** medallion architecture. Orchestrated with Apache **Airflow**, DAGs, containerized using **Docker**, and deployed as a Cloud Run Job with scheduling via **EventBridge** Scheduler.

AWS ETL & ML Pipeline for Student Performance Prediction

- Built a scalable **AWS** data pipeline using **S3**, Glue, and Redshift to automate **ETL** and predict student performance and deployed an HTML based user interface on **EC2** using Elastic Beanstalk.

Roam Reader: AI-Powered Travel Journal Application

- Developed a full-stack AI-powered application that transforms Google Maps location history into an interactive travel journal using Lang Chain, OpenAI API, and a custom SQLite-based ETL pipeline.
- Designed intelligent data handling and retrieval workflows, overcoming limitations of standard RAG + vector DB setups by implementing logic to accurately resolve complex mathematical and timestamp inconsistencies.

Wind Power Forecasting with LSTM – Streamlit App

- Developed a **time-series models** for wind power forecasting improving forecasting accuracy by 8% thru feature Engineering. Deployed an Streamlit web application with interactive UI for model tuning and validation.

EDUCATION

The University of Texas at Dallas M.S., Business Analytics & AI

Jan 2023 – Dec 2024, GPA 3.6

Anna University, Chennai, India B.E., Electrical Engineering

Aug 2014 – May 2018, GPA 3.4

TECHNICAL SKILLS

Programming Languages: Python, R, SQL.

Tools: Spark, Apache Airflow, Power BI, Docker, Snowflake, Databricks, Dbt, LangChain.

Cloud: AWS (Redshift, S3, Glue, Lambda, EC2, DynamoDB, Kinesis streams).

Databases: Redshift, MySQL, PostgreSQL, DynamoDB, SQLite.

Certifications: Coursera-Deeplearning.ai-AWS Data Engineering Associate
