

# Sriram Srinivasan

Data Analyst

(316) 249-7811 | Waterloo, IA | Open to relocation | [sriram.yishun@gmail.com](mailto:sriram.yishun@gmail.com) | [linkedin.com/sriram-srinivasan00](https://www.linkedin.com/sriram-srinivasan00)

## WORK EXPERIENCE

**Extern**

**March 2025 - Present**

### TruBridge Healthcare Data Analytics Externship

- Analyzed colorectal cancer risk across 99 Iowa counties by integrating ACS and Cancer Registry data with 95% accuracy, identifying child poverty, female poverty, and midlife uninsurance as top SDOH predictors.
- Built an end-to-end analysis pipeline using Python and Power BI, transforming complex SDOH data into actionable insights for public health screening of 30+ highly vulnerable counties.

### Stanford Medicine Process Design & Strategy Consulting Externship

- Analyzed nephrology care team workflows using root cause analysis to identify bottlenecks in lab result escalations, improving lab-to-action response time by 30%.
- Partnered with clinicians and ops leaders to prototype a decision-support dashboard with KDIGO-aligned thresholds, cutting intervention delays by 25%.
- Presented operational insights and escalation triggers to executives and frontline care teams, aligning priorities and improving system-wide responsiveness.

**Clicked**

**July 2024 - February 2025**

### Business Strategy & Analytics Consultant

- Created a centralized Salesforce CRM architecture to improve engagement forecasting by 30% by auditing stakeholder workflows and integrating loyalty, marketing, and ESG data.
- Increased frequent flyer engagement by 12% and sustainability opt-ins by 22% by developing AI-driven personalization strategies and delivering an executive-aligned roadmap.
- Collaborated with cross-functional teams to define KPIs and automate marketing workflows, aligning CRM insights with retention and upsell strategies for high-value customers.

### Delta Bravo Artificial Intelligence

**January 2024 - June 2024**

#### Public Health Data Analyst

- Engineered Alteryx ETL workflows to clean and integrate 3M+ Census records across income, education, and healthcare indicators, enabling scalable SDOH segmentation by tract.
- Applied time-series anomaly detection in Python to uncover drop-offs in insurance access and care-seeking behaviors linked to commute burden and post-COVID disruptions.
- Designed Power BI dashboards with DAX-driven filters to surface 10-year trends in healthcare access gaps; flagged 150+ high-risk tracts with 95% model precision.
- Partnered with stakeholders to initiate equity-focused interventions across 30+ underserved communities, translating insights into grant funding and health service planning.

### Ennovar Information Systems

**June 2023 - August 2023**

#### Operations Data Analyst

- Standardized 1,500+ HR records with 95% accuracy using KNIME ETL pipelines and normalized onboarding data into a 3NF relational model, reducing data redundancy and enhancing data integrity.
- Automated workforce pipeline updates with parameterized SQL scripts, saving 16+ HR hours monthly and enabling real-time workforce metrics tracking in dashboards.
- Created HR analytics dashboards with metrics like churn rate and onboarding lags, enabling leadership to monitor and improve hiring and rehire workflows.

### Wichita State University School of Computing

**August 2022 - May 2024**

#### Academic Data Analyst

- Analyzed academic data from 800+ undergrads to flag at-risk students and collaborated with faculty to implement predictive early alert indicators across core courses.
- Built Tableau dashboards showing GPA trends, retention, and assignment completion rates, enabling a 4% increase in term-over-term course performance.
- Led end-of-semester data briefings with instructors and success coaches, helping reduce withdrawal rates from 16% to 12% by aligning interventions with student progress patterns.

## PROJECTS

---

### Hospital Patient Records & Health Insurance Coverage - [Project](#)

Dashboard to visualize hospital data trends in admissions, procedures, and billing using Python, Power BI, and DAX.

- Built a Python data pipeline to clean 50K+ EHR data, normalize fields, and engineer analytic features.
- Merged five datasets and created KPIs like readmission rate and billing gaps in a Power BI dashboard.
- Reduced data prep time by 35% and expanded operational KPIs 4x to improve hospital decision-making.

### Speech Emotion Recognition - [Project](#)

Deep learning model to detect emotional states from speech and facial cues using Python, PyTorch, and LSTM.

- Drew acoustic and facial features from 100+ samples with openSMILE and openFACE for emotion detection.
- Trained a 2-layer LSTM to predict arousal and valence states, improving CCC scores by 18% over baseline.
- Achieved 90% accuracy on AVEC 2019 data and built a pipeline for emotion-aware healthcare systems.

## SKILLS & TOOLS

---

**Advanced Data Analytics:** SQL (PostgreSQL, MySQL), Python (Pandas, NumPy), Excel (Pivot Tables, VLOOKUP)

**Data Visualization & Reporting:** Power BI (DAX, Power Query), Tableau, Statistical Modeling, Trend Analysis

**ETL & Data Engineering:** Alteryx, KNIME, Data Cleaning, Transformation, 3NF Data Modeling

**Project Tools and Collaboration:** Microsoft Office, Jira, Confluence, Trello, Agile Methodologies

## EDUCATION

---

**Wichita State University** Master of Science in Computer Science

**May 2024**

**Wichita State University** Bachelor of Science in Computer Science

**May 2022**
