

SRI RAM SAI VAMSI KUCHIMANCHI

Java Full Stack Developer
vamsiksrs@gmail.com | (513)-413-6036

SUMMARY

Full Stack Developer with over **4 years of experience** designing and delivering **scalable web applications** in **healthcare, enterprise, and internal operations** environments. I am skilled in creating **intuitive and responsive front-end interfaces** using **React.js** and **TypeScript**, while building **robust backend services** with **Java, Spring Boot**, and **microservices architectures**. Experienced in optimizing **RESTful API integrations**, improving **data flow**, and enhancing **application performance**. Proficient in implementing modern development practices including **CI/CD pipelines, unit and integration testing, containerization** with **Docker** and **Kubernetes**, and **collaborative Agile workflows**. Hands-on experience with **Gen AI** for **automation** and **test data simulation**.

SKILLS

Programming Languages:	Java (JDK 8/11/17), TypeScript, JavaScript (ES6+), Python, SQL, HTML5, CSS3
Frontend Development:	React.js, Redux, Redux Toolkit, Redux Thunk, Redux Saga, React Context API, React Router v6, React Hooks, Material UI, Bootstrap.
Backend Development:	Spring Boot, Spring MVC, Spring Data JPA, Spring AOP, Spring Security, Spring Cloud, RESTful APIs, Swagger (Open API), Microservices Architecture, Kafka.
Security & Authentication:	Spring Security, JWT Authentication, Role-Based Access Control, OAuth2.
Databases & Storage:	MySQL, SQL Server, H2.
Gen AI & Automation:	Generative AI Assistant Development, AI-Powered Test Data Simulation, Automated Workflow Assistance.
Testing & Debugging:	JUnit, Mockito, Jest, React Testing Library, Postman, Talend API Tester.
Tools & Platforms:	Git, GitHub, Visual Studio Code, Eclipse.

EXPERIENCE

Java Full stack Engineer, Capgemini, New Jersey August 2025 – Present

- Developed and maintained Spring Boot REST APIs for mobile ordering replication, enabling testers to simulate order placements across stage, CI, and pre-production environments with accurate data flow.
- Built ReactJS front-end components for the unified tools platform, providing interactive dashboards for managing test workflows and real-time monitoring of orders.
- Designed and implemented microservices for the unified tools platform to handle different modules independently, improving scalability, maintainability, and reusability of backend services.
- Implemented backend logic using Spring Boot and Hibernate to handle transactional operations, data validations, and workflow automation for multiple testing scenarios.
- Integrated backend APIs with ReactJS front-end using Axios, providing seamless data synchronization and real-time updates for testers.
- Developed a Gen AI-powered assistant to simulate customer data based on login credentials, allowing testers to perform realistic testing of workflows and scenarios.
- Collaborated with QA and DevOps teams to deploy applications in stage, CI, and pre-production environments, ensuring environment parity and stability.
- Implemented role-based authentication and authorization using Spring Security to secure access to sensitive test data and platform functionalities.
- Created reusable React components and implemented state management to enhance UI consistency and improve the overall tester experience.
- Conducted unit and integration testing using JUnit and Mockito to ensure backend logic accuracy and frontend-backend integration reliability.
- Participated in Agile SCRUM processes, including sprint planning, daily stand-ups, and retrospectives, contributing to timely delivery of platform enhancements and features.

Environment: Java 11+, Spring Boot, Hibernate, JPA, Spring MVC, Spring Security, Microservices, ReactJS, JavaScript (ES6+), MySQL, REST APIs, Axios, Postman, Git, Jenkins, JIRA, Agile SCRUM, Gen AI.

Full stack developer, Aerotek, Cincinnati

May 2025 – August 2025

- Developed and maintained RESTful APIs using Spring Boot to manage server monitoring, employee work assignments, and real-time system status updates.
- Built microservices for server management and employee tracking modules, ensuring modularity, scalability, and easier maintenance.
- Implemented Kafka-based messaging to enable real-time updates and synchronization between server status and task tracking services.
- Created ReactJS components for interactive dashboards that display server uptime, task completion, and performance metrics.
- Integrated Hibernate and Spring Data JPA for database operations, optimizing queries to handle large volumes of tracking data efficiently.
- Implemented Spring Security for authentication and role-based access control, ensuring only authorized users could access sensitive operational data.
- Participated in Agile sprints, code reviews, and collaborated with DevOps and QA teams to deliver stable and high-performing application enhancements.

Environment: Java 17+, Spring Boot, Spring MVC, Spring Security, Hibernate, JPA, ReactJS, JavaScript (ES6+), HTML5, CSS3, MySQL, REST APIs, Git, JIRA, Agile SCRUM.

Software Developer Intern, Scube Innovations

February 2025 – May 2025

- Designed and developed a responsive Event Management web application to manage event creation, registrations, and user interactions using Spring Boot (backend) and ReactJS (frontend).
- Built RESTful APIs with Spring Boot to handle core functionalities such as event creation, user authentication, registration, and admin approval workflows.
- Implemented user authentication and authorization using Spring Security with JWT tokens to securely manage user roles like admin, organizer, and attendee.
- Created dynamic frontend components using ReactJS and React Hooks to display events, manage bookings, and display user dashboards.
- Integrated MySQL database for storing event details, users, and registration data; handled database interaction using Spring Data JPA.
- Applied form validations, user feedback alerts, and pagination for enhanced usability and scalability.
- Followed Agile methodology for iterative development and used Git for version control.
- Added features like event search, filtering, ticket booking, and email notifications for better user engagement.
- Ensured application is RESTful, modular, and scalable, maintaining clean architecture and reusable components.

Java developer Intern, Express Scripts

February 2024 – December 2024

- Developed Spring Boot RESTful APIs to manage claim submission, verification, and approval workflows, ensuring seamless interaction between pharmacy, insurer, and patient modules.
- Integrated backend APIs with a ReactJS-based user interface to provide real-time claim tracking, prescription status updates, and claim history views.
- Implemented business rules and validations for eligibility checks, claim adjudication, and reimbursement calculation using Java and Spring Boot.
- Utilized Hibernate and JPA for data persistence and optimized database queries to handle large claim transaction volumes efficiently.
- Designed and developed role-based authentication and authorization using Spring Security to protect patient data and comply with HIPAA standards.
- Collaborated with pharmacy and data teams to connect APIs with external systems for prescription data exchange and real-time eligibility validation.
- Developed reusable React components and implemented form validations for claim submission pages using Formik and custom hooks.
- Wrote unit and integration tests using JUnit and Mockito to ensure reliability and accuracy of claim workflows before production deployment.

- Participated in Agile sprints, daily stand-ups, and code reviews, working closely with QA and DevOps teams for smooth integration and deployment.
- Contributed to implementing Gen AI-based features that assisted in claim summarization and automated validation, reducing manual review effort.

Environment: Java 11, Spring Boot, Spring MVC, Hibernate, JPA, Spring Security, ReactJS, Formik, Axios, MySQL, REST APIs, Postman, Git, Jenkins, JIRA, Agile SCRUM.

Software Engineer, Cognizant

October 2021– July 2023

- Developed Spring Boot–based RESTful APIs to handle product transactions, inventory updates, and internal access control across multiple business modules.
- Built ReactJS front-end components that dynamically render transaction data, access requests, and workflow dashboards using API integration via Axios.
- Designed modular microservices architecture to manage product, order, and user access independently, improving maintainability and scalability.
- Utilized Hibernate and Spring Data JPA for database operations and optimized SQL queries to enhance performance in transaction-heavy modules.
- Implemented secure authentication and role-based authorization using Spring Security, ensuring restricted access to internal and administrative tools.
- Developed and validated complex transactional workflows with rollback and error-handling mechanisms to maintain data consistency.
- Created reusable React Hooks and UI components to maintain consistency and improve the overall responsiveness of the internal web applications.
- Collaborated with the database team to refine queries, indexes, and entity mappings for faster transaction processing and reduced query latency.
- Created and maintained API documentation using Swagger and Postman, improving cross-team collaboration and integration with third-party systems.
- Wrote unit and integration tests using JUnit and Mockito to validate core APIs and ensure reliability during deployments.
- Participated in Agile ceremonies such as sprint planning, backlog grooming, and retrospectives, contributing to smoother project execution.
- Performed peer code reviews and used Git for version control to ensure consistent, high-quality code across all development teams.
- Integrated Jenkins CI/CD pipelines for continuous build and deployment, reducing manual intervention and deployment time.
- Investigated and resolved production issues related to access management and transaction processing, ensuring uninterrupted business operations.
- Developed admin dashboards and internal utilities to centralize tool access and provide monitoring capabilities for active transactions.

Environment: Java 11, Spring Boot, Spring MVC, Spring Security, Hibernate, JPA, ReactJS, JavaScript (ES6+), HTML5, CSS3, MySQL, REST APIs, Swagger, Postman, Git, Jenkins, JIRA, ServiceNow, Agile SCRUM.

EDUCATION

University of Cincinnati, Cincinnati, Ohio.
Master of Science: Information Technology (IT)

August 2023- December 2024

GMR Institute of Technology, Rajam, India
Bachelor of Technology: Computer Science and Engineering (CSE)

August 2017–August 2021
