

Sritulasi Kilaru Data/BI Analyst		
Arizona, USA +1 (201)-914-7748 skilaru86@gmail.com LinkedIn		
➤ SUMMARY		
Senior Data Engineer and Business Intelligence Analyst with 8+ years of experience designing robust data pipelines, leading end-to-end reporting solutions, and supporting analytical operations across healthcare, financial, and education sectors. Deep expertise in SQL and Python, with a strong track record of building scalable ETL processes using SSIS, Informatica, and Airflow. Experienced in cloud data platforms such as Snowflake, AWS Redshift, and Azure, and in delivering executive-level dashboards and reports via Power BI, Tableau, and SSRS. Known for structuring reliable, well-documented data models that align with compliance standards and enable accurate reporting across teams.		
➤ SKILLS		
Data Analysis & Visualization: Power BI, Tableau, Excel, SSRS, DAX, KPI Dashboards, Looker, Qlik Sense, MicroStrategy		
Databases & Query Languages: SQL Server, Snowflake, Amazon Redshift, PostgreSQL, Oracle, MySQL, T-SQL, PL/SQL		
Programming & Scripting: SQL (Advanced), Python (Pandas, NumPy, PySpark), R, Shell/Bash		
ETL & Data Engineering: Apache Airflow, Informatica, SSIS, AWS Glue, Azure Data Factory, Talend, HVR, dbt, Data Bricks		
Big Data & Distributed Processing: Apache Spark, Kafka, Hive, Hadoop, Delta Lake, Presto, Databricks, EMR		
Cloud Platforms: AWS, Azure, GCP		
Data Modeling & Architecture: Star & Snowflake Schema, Dimensional Modeling, Kimball/Inmon Methodologies, Data Vault 2.0, Logical & Physical Modeling		
CI/CD & DevOps for Data Pipelines: Git, Bitbucket, SourceTree, GitLab CI/CD, Jenkins, Docker, Terraform, Airflow DAG orchestration, dbt version control		
Data Governance & Quality Assurance: Great Expectations, Deequ, Collibra, Alation, Data Lineage, Data Cataloging, HIPAA / GDPR Compliance		
Statistical & Advanced Analytics: A/B Testing, Hypothesis Testing, Time Series Forecasting, Regression Analysis, Clustering, KPI Development, Predictive Modeling		
Project Management & Collaboration: JIRA, Confluence, Agile/Scrum, Kanban, ServiceNow		
➤ EXPERIENCE		
Business Analyst/ Data Engineer University of Phoenix Phoenix, AZ		Sep 2018 – Present
- Translated complex business requirements into scalable data solutions by managing intake, transformation, reporting, and end-to-end documentation while anticipating future reporting needs. - Expanded Power BI and Tableau dashboards for executive stakeholders, incorporating advanced DAX, KPI logic, and real-time performance visualizations, leading to a 30% boost in data-driven decision-making. - Led UAT, deployment, and migration of legacy reports to AWS Redshift, ensuring 100% accuracy and secure access across platforms. - Designed and delivered SSRS reports and built SSIS-based ETL pipelines, improving data integration efficiency by 30%. - Engineered the EDW migration from on-prem SQL Server to Snowflake using Databricks, AWS S3, and streaming tasks, ensuring full migration with zero data loss. - Improved complex queries and stored procedures using T-SQL, PL/SQL, and PostgreSQL, achieving 15x performance improvement in data retrieval. - Developed Python-driven analytical reports by integrating multi-source datasets for trend analysis and KPI insights. - Conducted peer reviews of regulatory reports ensuring data accuracy, compliance, and alignment with audit standards. - Utilized SourceTree and Bitbucket for version control and code collaboration, improving deployment traceability and team productivity by 40%. - Facilitated sprint planning, backlog grooming, and support ticket resolution using JIRA, ensuring timely delivery and boosted customer satisfaction. - Trained end-users on Power BI, AWS Redshift, and data tools, enhancing analytics adoption across departments.		
Data Analyst UnitedHealth Group Ontario, CA, USA		Jan 2017 – Sep 2018
- Gathered business requirements and defined logic for analytics and dashboard solutions using SQL, Power BI, and Tableau, resulting in a 30x improvement in reporting accuracy. - Built custom, parameterized, and drill-down reports using SSRS, integrating multiple datasets and T-SQL queries, reducing manual reporting efforts. - Developed interactive dashboards in Power BI and Tableau, incorporating dynamic filters and integrating with big data tools like Hive and Spark, improving accessibility by 35%. - Designed and deployed ETL workflows with SSIS and Azure Data Factory, transforming raw data into warehouse-ready formats, increasing processing efficiency by 25%. - Tuned query performance & built database objects in SQL Server and Oracle, applying indexing & partitioning techniques to reduce execution time. - Conducted statistical modeling and predictive analysis using R and Python to uncover trends and support strategic business decisions. - Utilized TFS and Git for version control and deployment automation, streamlining delivery across development and testing environments. - Participated in cross-functional meetings to understand data architecture, contributing to dimensional modeling using Star Schema and improving data structure by 2x for analytics.		
Data Analyst Intern CitiGroup USA		Jul 2016 - Dec 2016
- Assisted in collecting and analyzing approximately 75,000 financial transactions to support compliance reporting and risk monitoring across multiple departments, contributing to refined audit readiness and internal controls. - Wrote efficient SQL queries to extract, filter, and aggregate data from Oracle and SQL Server, reducing report generation turnaround time by approximately 20%. - Generated automated Excel dashboards using pivot tables, charts, and formulas to present weekly KPIs, improving visibility for analysts and senior management. - Supported Power BI report development by preparing data sources, creating calculated fields, and applying filters for dynamic marketing and risk-related dashboards. - Conducted data profiling and cleansing to identify missing values and outliers, improving accuracy of reporting datasets used in regulatory submissions. - Collaborated with data engineers and QA teams to test ETL logic and validate source-to-target mappings during a key internal migration project.		
BI Analyst/SQL Developer, Xoomsys Technologies, India		Jan 2014 – Dec 2014
- Actively participated in requirement gathering, design, and development of applications, ensuring alignment with business needs. - Initiated and deployed SSRS reports, including designing layouts, defining data sources, and aggregating data to meet business requirements, resulting in a 30x reduction in report generation time. - Developed and enhanced ETL processes using SSIS and Informatica, integrating data from multiple sources while improving data quality 40%. - Utilized T-SQL to optimize and write complex queries, including joins and subqueries. - Cooperated with stakeholders to identify and define business requirements for data warehousing and analytics solutions, enhancing reporting capabilities.		
➤ EDUCATION		
Master of Science in Electrical and Computer Engineering New York Institute of Technology, NY		Dec 2016
Bachelor of Science in Electrical and Electronics Engineering Jawaharlal Nehru Technology University, Hyderabad		Jul 2014
