Profile Summary

With over three years of experience in data analysis, ETL development, and data engineering, expertise in Python, SQL, and cloud technologies (AWS, Azure) was leveraged to optimize data workflows and deliver insights. Skilled in creating dashboards with Power BI, Tableau, and Amazon QuickSight. Experience in Agile methodologies ensured that data solutions aligned with business goals and enhanced operational efficiency through effective data management and governance.

Skills

Languages — Python, SQL, NoSQL, HTML, CSS

Data Processing & Streaming Tools — NumPy, Pandas, Matplotlib, GitHub, Agile, Hadoop, PySpark, Snowflake, Seaborn, Scikit-Learn, Jira, KPI Analysis, TensorFlow, PyTorch, Apache, AWS Lambda, Azure Functions, Apache Kafka, Kubernetes, Docker.

Databases and Querying — MySQL, Redshift, PostgreSQL, MongoDB, DynamoDB, RDBMS, Oracle, Azure Cosmos DB, Amazon Aurora, GraphQL

Data Analysis / Tools — Power BI, Tableau, Data Bricks, MS Excel, Data (Modeling, Mapping, Mining, Extraction, Transformation), Salesforce, Confluence, Alteryx, ETL, Data Processing, Data Wrangling, Data Pipelines, Apache Airflow, BigQuery, Azure Synapse Analytics, AWS Glue, Looker

Professional Experience

Data Analyst, *Persistent Systems Ltd.*

07/2023 – 02/2025 | Remote, USA

- Engineered ETL pipelines using Python and Spark to integrate data from multiple sources into Snowflake, improving data accessibility and reporting efficiency by 10%. Used Spark SQL for handling large datasets and ensured consistent, reliable data flows.
- Leveraged Azure Databricks for data transformation, enabling cost-effective storage solutions that reduced overall storage expenses by 20%. Applied SQL across MS SQL, Oracle, and PostgreSQL to manage, clean, and standardize data effectively.
- Conducted comprehensive data cleansing, profiling, and validation to ensure high data quality and accuracy. Used Excel for advanced data manipulation with formulas such as IF/THEN, VLOOKUP, and SUMIF to prepare and clean data effectively.
- Developed interactive dashboards and reports in Tableau, which increased data visibility and user engagement by 15%. Ensured stakeholders had access to actionable insights for better decision-making.
- Applied data governance practices to maintain data integrity and consistency, collaborating with cross-functional teams to enhance data quality. Facilitated clear communication and progress tracking using Excel and Jira, aligning with Agile project principles.
- Utilized Azure Synapse and Snowflake for scalable data storage and processing, ensuring the data infrastructure supported growing business needs and enabled secure data management.
- Effectively communicated technical concepts and insights to stakeholders using Jira, Excel, and visualization tools. Managed cross-functional team collaboration in a global delivery environment and applied strong problem-solving skills to address data quality issues and optimize system performance.

Research Intern, *UNC Charlotte*

01/2023 – 05/2023 | Charlotte, USA

- Developed over 40 interactive dashboards using Tableau and Power BI, enhancing real-time KPI tracking and increasing management's data-driven decision-making efficiency by 25%. Implemented advanced data visualization techniques to provide actionable insights.
- Engineered and automated ETL pipelines with AWS Glue and Apache Airflow, integrating diverse customer data sources and reducing data integration time by 50%. Employed SQL and Python for effective data transformation and quality control.
- Leveraged AWS analytics services, including Amazon Redshift and AWS Athena, to derive actionable insights that improved the accuracy of customer trend predictions by 40%. Enhanced data visualization capabilities with Amazon QuickSight for more insightful reporting.

- Conducted advanced data analysis and predictive modeling using Python and machine learning libraries like scikit-learn. Applied techniques such as regression analysis and clustering, resulting in a 30% increase in the accuracy of customer behavior forecasts.
- Collaborated with cross-functional teams to streamline data workflows and optimize data management processes. Utilized Agile methodologies with Jira for efficient project management, ensuring timely delivery of insights and solutions.

Data Analyst, Tata Consultancy Services

10/2020 – 01/2022 | Hyderabad, India

- Collaborated with retail stakeholders to identify data requirements for refining customer segmentation and enhancing marketing strategies, leading to actionable insights that supported customer engagement and revenue growth.
- Utilized Python libraries like Pandas and Scikit-Learn to prepare data for analysis, including feature engineering, data normalization, and outlier detection, ensuring high data quality and reliability for downstream analytics.
- Performed exploratory data analysis and applied statistical methods to identify key patterns and trends in customer behavior, using statistical tests and visualizations to support strategic marketing decisions.
- Designed and deployed interactive dashboards and detailed reports using Tableau. Generated comprehensive customer segmentation reports with actionable marketing recommendations to support strategic decision-making.
- Integrated data from multiple sources using Apache Kafka and Airflow, ensuring seamless data flows and consistency across systems. Applied complex SQL queries to support data manipulation and streamline data-driven insights.
- Leveraged Apache Hadoop and Hive for large-scale data processing, with AWS Redshift and Google BigQuery providing flexible, scalable storage solutions. Automated data workflows using Python scripts and Airflow, reducing manual tasks and enhancing productivity.
- Provided data-driven recommendations to align marketing strategies with business goals, collaborating closely with business units to ensure insights met organizational objectives.

Intern, Digiverse Technologies Pvt. Ltd.

03/2019 – 08/2019 | Hyderabad, India

- Assisted in developing and executing Python scripts for data cleansing and preliminary analysis, ensuring data quality and reliability for reporting purposes.
- Performed data validation and reconciliation using SQL queries in MySQL, improving data accuracy and reliability.
- Generated reports using Excel and Python, summarizing analytical results to support senior team members in decision-making.
- Documented data processing tasks and supported Agile project management practices, participating in sprint reviews and maintaining updates in Jira.
- Collaborated with team members to optimize database queries, enhancing overall data processing efficiency.

Education

Master of Science, University of North Carolina at Charlotte

01/2022 – 06/2023 | NC, USA

Computer Science

Bachelor of Technology, GITAM University

05/2016 – 06/2020 | AP, India

Computer Science

Certifications

[Microsoft Certified: Azure Data Engineer Associate](#)
