

SRUJANA GUNTETHI

Hartford, United States +14145957049 srujanaguntheti49@gmail.com

PROFESSIONAL SUMMARY

Detail-oriented Population Health Data Analyst with expertise in data analysis, SQL database management, statistical modeling, and predictive analytics. Skilled in Python, R, and SAS, with hands-on experience in visualizing complex healthcare data using Tableau and Power BI. Proficient in healthcare metrics and standards (HEDIS, ICD-10, CPT, HL7, FHIR), ensuring accurate reporting and compliance with HIPAA, GDPR, and PHI security regulations. Adept at leveraging machine learning and AI for risk stratification and population health management, driving data-driven decision-making to improve patient outcomes. Collaborative team player with a strong background in business intelligence strategy, cross functional teamwork, and healthcare data governance.

SKILLS

- | | | |
|--|---|--|
| • Data Analysis & Interpretation | • SQL & Database Management | • Programming (Python/R/SAS) |
| • Data Visualization & Reporting (Tableau, Power BI) | • Statistical Modeling & Predictive Analytics | • Healthcare Metrics & Standards (HEDIS, ICD-10, CPT, HL7, FHIR) |
| • Machine Learning & AI for Risk Stratification | • Population Health Management & Analytics | • Data Governance & Compliance (HIPAA, GDPR, PHI Security) |
| • Business Intelligence Strategy & Leadership | | |

EXPERIENCE

- | | |
|--|------------------------|
| Healthcare Data Analyst
Connecticut Children's Hartford, CT, United States | January 2024 - Current |
| • Performed data analysis and interpretation, using SQL, Python, and R to extract, clean, and analyze population health datasets for actionable insights | |
| • Managed and optimized databases, ensuring efficient data storage, retrieval, and processing to support population health initiatives | |
| • Developed data visualizations and reports using Tableau and Power BI, presenting key health trends and performance metrics to stakeholders | |
| • Applied statistical modeling and predictive analytics, identifying patterns in patient populations to support early intervention and risk assessment | |
| • Ensured compliance with healthcare standards, aligning data analysis processes with HEDIS, ICD-10, CPT, HL7, and FHIR requirements for accurate reporting | |
| • Utilized machine learning and AI tools to support risk stratification and predictive modeling for population health management | |
| • Collaborated with healthcare teams, including clinicians and administrators, to develop data-driven strategies that enhance patient outcomes and resource allocation | |
| • Contributed to business intelligence initiatives, providing data-driven insights that support strategic planning and policymaking in population health programs | |

- Integrated and maintained ETL processes, automating data extraction, transformation, and loading from multiple healthcare data sources, including EHRs, insurance claims, and public health databases, to improve data accessibility and efficiency
- Conducted geospatial and social determinants of health (SDOH) analysis, leveraging GIS tools and demographic data to identify health disparities, improve resource allocation, and support targeted intervention programs

Population Health Data Integration Specialist

November 2019 - June 2023

Evolut Health International | India

- Led data analysis initiatives, utilizing SQL, Python, and R to extract, clean, and interpret large-scale population health datasets, improving reporting accuracy
- Designed and implemented predictive models, leveraging machine learning techniques to identify high-risk patient populations and reduce hospital readmission rates
- Developed interactive dashboards in Tableau and Power BI, enhancing real-time data visualization and enabling data-driven decision-making for executive leadership
- Optimized healthcare database management, integrating structured and unstructured data sources (EHRs, claims, and demographic data) to improve efficiency
- Ensured compliance with healthcare regulations, implementing robust data governance strategies to maintain HIPAA, GDPR, and PHI security standards across analytical workflows
- Collaborated with cross-functional teams, including clinicians and IT specialists, to enhance population health management strategies and improve patient care outcomes
- Standardized healthcare metrics reporting, ensuring alignment with HEDIS, ICD-10, CPT, HL7, and FHIR standards to support quality improvement initiatives
- Developed business intelligence strategies, providing leadership in data-driven decision-making and guiding stakeholders in leveraging analytics for strategic healthcare planning
- Integrated and automated ETL processes, streamlining data ingestion from multiple healthcare sources, including EHRs, insurance claims, and social determinants of health datasets, to improve data accessibility and interoperability

EDUCATION

Master of Science (M.S.) - HEALTH INFORMATICS

December 2024

UNIVERSITY OF WISCONSIN, Milwaukee

Bachelor of Science (B.S.) - B.PHARMACY

December 2020

SREE COLLEGE OF PHARMACY, India
