

SRUJANA JAPA

 srujanajapa@gmail.com |  (507) 316-2989

PROFESSIONAL SUMMARY

Healthcare IT professional with 7+ years of experience in developing and implementing HL7, CDA, FHIR, X12, XML, and flat file interfaces. Proficient in healthcare coding systems (LOINC, SNOMED, ICD-9/10) and integration engines like Mirth Connect and Rhapsody. Skilled in interface development, data quality, migration, and public health reporting. Strong foundation in RDBMS and OOP principles with a proven ability to lead cross-functional initiatives, resolve complex data issues, and ensure high-quality data exchange across systems. Experienced in both public health and private sector environments.

PROFESSIONAL EXPERIENCE

Electronic Data Exchange Coordinator (Research Scientist 3)

Minnesota Department of Health

July 2024 – April 2025

Centers for Disease Control and Prevention (CDC) Foundation (Client: Minnesota Department of Health)

Jan 2022 – June 2024

- Designed and implemented HL7, CDA, FHIR, XML, and flat file interfaces to support seamless data exchange.
- Developed a custom HL7 validation tool/rules engine in R to improve data quality assessments.
- Utilized the Rhapsody Integration Engine for routing and transformation of public health messages.
- Led onboarding for Electronic Laboratory Reporting (ELR) and Electronic Case Reporting (eCR) across multiple programs.
- Oversaw interoperability for 100+ providers submitting electronic data to MDH, including onboarding, support, and issue resolution.
- Leveraged HL7 wrappers to transmit case reports from external partners to MDH cloud storage buckets, enabling timely access for epidemiologists.
- Oversaw CDC and interstate ELR data exchanges from planning to production deployment.
- Supported 30 CDC ELIMS units capable of generating Electronic Laboratory Reports (ELRs), ensuring seamless data flow to MDH.
- Facilitated and maintained 13 interstate ELR data exchanges to support disease reporting and surveillance efforts.
- Troubleshoot and resolve approximately 300 monthly data quality issues related to validation and translation errors.
- Collaborated with program areas to support product code mappings and transform data to meet surveillance needs.

- Conducted data quality analysis within the Minnesota Electronic Disease Surveillance System (MEDSS).
- Investigated and resolved ELR/eCR transmission issues with external trading partners.
- Created and maintained operational alert rules in GitLab to monitor interface health.
- Used SQL, PostgreSQL, and AWS Data Lake for data extraction and reporting.
- Tracked tasks and workflows using JIRA and Kanban boards.
- Contributed to CELRs reports, ensuring timely COVID-19 data submission to the CDC.
- Tested use cases during the creation of individual use case lockers from universal lockers across all data routes to ensure accurate data segregation and functionality.
- Gained hands-on experience with Microsoft Office 365 tools, especially Excel and Word; regularly used Excel for data organization, analysis, calculations, and creating structured tables, and utilized Word for drafting technical documentation, developing standard operating procedures, and preparing communication materials for both internal and external stakeholders.

Environment: Maven Electronic Disease Surveillance (EDSS) system, R, Rhapsody, PostgreSQL, AWS Data Lake, HL7 v2.x, Microsoft Office 365 tools

IT Manager

Medstar Laboratory

July 2016 – Nov 2017

- Managed Laboratory Information System (LIS) operations and HL7 interfaces with EHRs.
- Led HL7 interface design for bidirectional communication between LIS and clinical systems.
- Supported seamless data exchange for approximately 1,200 providers, ensuring efficient interoperability and data flow.
- Oversaw data conversion projects for newly acquired laboratory systems.
- Provided LIS support and coordinated with vendors for software updates and maintenance.
- Supported Active Directory, user management, and network administration.

Environment: Hex Labs LIS, UNIX, C#, Mirth Connect, Windows Server, HL7 v2.x, Lab Central

HL7 Interface Analyst (Internships & Contract Work)

May 2005 – March 2008

- Developed HL7 interfaces to exchange Orders, Results, and Patient Demographics.
- Designed and configured ORM, ORU, ADT, and SIU message types.
- Built data transformation and business logic using a rules engine.
- Conducted integration testing and provided go-live support.
- Collaborated with EHR and LIS vendors to enable smooth data flow.

Environment: C#, MS SQL Server, Windows Server, HL7 v2.x

EDUCATION

Master's Degree in Computer Applications

Kakatiya University, 2006

Bachelor's Degree in Computer Applications

Kakatiya University, 2003

CERTIFICATIONS

FHIR Foundational Course — *HL7 International, August 2025*

TECHNICAL SKILLS

- **Programming & Scripting:** C#, R, SQL
- **Healthcare Standards & Tools:** HL7 v2.x, FHIR, XML, X12, LOINC, SNOMED, ICD-9/10, Maven Electronic Disease Surveillance (EDSS) system, Microsoft Office 365 tools
- **Integration Engines:** Mirth Connect, Rhapsody Integration Engine, GitLab
- **Databases:** PostgreSQL, MS SQL Server, AWS Data Lake
- **Project Management:** JIRA, Kanban
- **Operating Systems:** Windows Server, UNIX

KEY STRENGTHS

- ✓ **Analytical Thinking:** Skilled at identifying and resolving complex data integration issues.
- ✓ **Healthcare IT Expertise:** Broad experience in both clinical and public health data systems.
- ✓ **Leadership & Collaboration:** Comfortable leading initiatives and working independently or in teams.
- ✓ **Process Optimization:** Proven ability to streamline validation and reporting workflows.
