

Srunith K
Full Stack Developer
Email :srunithk.cs@gmail.com
Contact: 206-671-3763

PROFESSIONAL SUMMARY:

- Over **6+ years of hands-on experience** as a Full Stack Developer in **Finance, Insurance, and Healthcare** domains, delivering enterprise-grade solutions with strong backend and frontend architecture.
- Proven expertise in building **Java-based microservices** using **Spring Boot, Spring MVC, and Spring Security**, applying **MVC, Singleton, and Factory** design patterns to ensure modularity and reusability.
- Strong frontend development experience with **Angular** and **React.js**, developing scalable, single-page applications with reactive data handling using **RxJS** and stateful routing.
- Proficient in integrating **Apache Kafka** as a core messaging layer in distributed systems for event-driven workflows, enhancing system decoupling and fault tolerance.
- Developed secure APIs with **OAuth2, JWT, and SiteMinder** integration, ensuring compliant access control and robust identity management for critical applications.
- Experience in **containerization** using **Docker**, orchestrated deployments on **AWS EKS** and **Azure AKS**, and managed infrastructure provisioning with **Helm, kubectl, and CloudFormation**.
- Implemented robust **CI/CD pipelines** using **Jenkins**, integrated with **Git, Bitbucket**, and scripted using **Maven** and **Gradle** to automate deployment lifecycles and improve release velocity.
- Hands-on experience with **AWS cloud services**, including **EC2, S3, CloudFront, CloudWatch, RDS, and Elastic Beanstalk**, optimizing performance and cost efficiency across applications.
- Designed and optimized relational databases using **Oracle, Snowflake, and PostgreSQL**, writing complex **PL/SQL** procedures and optimizing queries for scalable data access.
- Skilled in implementing **asynchronous messaging** using **RabbitMQ** and **Kafka**, supporting real-time data pipelines and decoupled microservice interactions.
- Monitored application health using **Prometheus, Grafana, Splunk, and Datadog**, setting up alerts, dashboards, and log-based insights to support proactive incident management.
- Strong understanding of **Object-Oriented Design (OOD), OOP principles**, and clean code practices, applied consistently across backend and frontend codebases.
- Experienced in **unit and integration testing** using **JUnit, Mockito, Jasmine, and Chai**, improving test coverage and reducing production bugs across multiple client projects.
- Adept at collaborating in **Agile/Scrum** environments, managing sprints via **JIRA**, leading peer code reviews, and maintaining documentation in **Confluence** and **Google Workspace**.
- Versatile in using **HTML5, CSS3, Bootstrap, Material UI, jQuery, and Ajax** to craft interactive, accessible, and responsive user interfaces.

TECHNICAL SKILLS

Languages	Java 8/11, Python, C, C++, PL/SQL
Web Technologies	HTML5, CSS3, Bootstrap, JavaScript, JQuery
Relational Databases	Oracle 8i/9i/10g/11g, SQL server , MySQL 5.7, DB2 11.1. Web Services REST
Frameworks	Spring, Spring Boot, Hibernate, Spring MVC, React JS, Angular
AWS	EC2, Simply Storage Service, Cloud Front, Cloud Watch,
Azure	Azure CDN, Azure Functions, Azure Active Directory, Azure Kubernetes Service (AKS)
Operating systems	Windows 2000\98\XP\7\vista\8\Unix\Linux - Ubuntu\MacOS
Methodologies	Agile, waterfall, Scrum, SDLC.
Developer IDE	Eclipse, Notepad ++, IntelliJ, VS Code
Platforms	
Build Tools	Maven, Gradle, NPM
Tools	Git/Bitbucket, Jira, Docker, Jenkins, Splunk, Prometheus, Grafana, Service Now, Data dog, Apache Kafka
Architecture	Microservices, Monolithic
Cloud	AWS, GCP, Azure

PROFESSIONAL EXPERIENCE

SCAN Health Plan, USA

Jan 2024 - Current

Role: Java Full Stack Developer

- Designed and implemented **Spring Boot** based **microservices** with **RESTful APIs** to modernize healthcare operations, covering **claims processing, member enrollment** and **provider interactions**. Applied **Spring MVC** and dependency injection for modular, testable backend services.
- Specialized in **claims workflows**, optimizing adjudication and payment processes by integrating **RabbitMQ** for asynchronous messaging, which increased transaction throughput by **30%** and fault tolerance under high transaction volumes.
- Developed **React.js** front-end portals for patients and providers, building reusable UI components and integrating secure backend services for seamless Medicare member access.
- Leveraged **JPA/Hibernate ORM** with **PostgreSQL** to streamline data access, implementing fetch strategies and caching mechanisms that reduced average response times by **25%**.
- Implemented secure authentication with **OAuth2** and **JWT**, ensuring **HIPAA-compliant** access control and session management across distributed services.
- Applied **JUnit** and **Mockito** for comprehensive unit and integration testing, raising service layer coverage to 85% and reducing post-release defects by 20%.
- Built and maintained **CI/CD pipelines** with **Jenkins**, automating build, test, and deployment stages; collaborated using **Git** for **version control** and **JIRA** for **Agile sprint** management.
- Deployed applications on **AWS EC2**, managed static assets in **S3**, and integrated **CloudFront** for content delivery, reducing latency and improving scalability for Medicare members across multiple regions.

Total Bank Solutions, USA

Mar 2022 - Dec 2023

Role: Full Stack Developer

- Built scalable **Spring Boot** microservices with **RESTful APIs**, using **Spring Data JPA/Hibernate** to manage complex entity relationships and transactional workflows in **Oracle 11g** and **Snowflake**.
- Architected event-driven workflows with **Apache Kafka**, defining topics for **transaction updates**, **deposit sweep lifecycle events**, and **client onboarding**, ensuring high-volume, real-time processing of **50k** plus events pers second.
- Delivered **React.js** and **TypeScript** portals with **RxJS**, implementing responsive, component-based UIs that provided banking clients real-time access to financial and compliance data, improving customer portal adoption **by 20%**.
- Deployed containerized applications using Docker on **AWS EKS**, with orchestration via **Helm charts** and **kubectl**, leveraging **EC2,S3,CloudWatch**, and **ECR** for infrastructure, storage, and monitoring.
- Secured distributed services with **Spring Security** (OAuth2/JWT), integrating with SiteMinder SSO to enforce enterprise access control and regulatory compliance across banking applications.
- Enhanced system observability by implementing **Prometheus/Grafana** for metrics, **Datadog** for cloud monitoring, and **Splunk** dashboards for compliance logs and production troubleshooting.
- Automated **CI/CD pipelines** using **Maven**, **Jenkins** and **Bitbucket**, integrated JUnit/Mockito testing for reliability, and applied **JConsole/JVisualVM** for proactive performance tuning and SLA compliance.
- Collaborated in **Agile sprints** with **JIRA/Confluence**, led code reviews, mentored junior developers, and promoted clean coding standards to improve delivery quality across full stack projects.

Dell Technologies, India

Jan 2020 - Nov 2021

Role: Full Stack Developer

- Developed scalable **RESTful APIs** with **Java**, **Spring Boot** and **Spring MVC**, enabling seamless data exchange across enterprise infrastructure applications.
- Designed backend systems using **Spring Data JPA**, **Hibernate** and **Oracle PL/SQL**, optimizing query performance with stored procedures and transactional management.
- Implemented Spring Security with **OAuth2/JWT**, safeguarding enterprise data and preventing vulnerabilities such as **CSRF** and **XSS**.
- Built dynamic **Angular** (v2+) frontends with **RxJS** and **RouterModule**, delivering responsive SPAs for customers and internal Dell platforms.
- Developed cross-browser compatible UIs using **HTML5**, **CSS3**, **Bootstrap** ensuring responsiveness and compliance with **WCAG** accessibility standards.
- Consumed **JSON/XML APIs** via Angular **HttpClient**, implementing error handling, lifecycle management, and efficient data parsing for smoother user experiences.
- Automated deployments using **Jenkins CI/CD** pipelines and Docker, reducing release cycles from 2 weeks to 3 days and ensuring zero-downtime rollouts.
- Enhanced system observability with **Prometheus** and **Grafana** setting up alerts for service latency, error rates, and resource utilization.
- Deployed applications on **Microsoft Azure App Service** and **Azure CDN**, improving global static content delivery and lowering latency by **45%** for Dell enterprise clients.
- Developed **Azure Functions** to automate background tasks such as scheduled report generation, system health checks, and notification triggers.

- Enhanced observability and performance monitoring with **Azure Monitor**, Application Insights, **Prometheus**, and **Grafana**, establishing proactive alerts for latency and error thresholds.
- Collaborated in Agile teams using **GitHub**, **JIRA**, and Confluence applied design patterns (**DAO**, **Builder**, **Singleton**) and mentored peers in clean code practices.

Beyond Key Solutions, India
Role: Frontend Developer

Jan 2019 - Dec 2019

- Developed and maintained responsive **Angular (v6+) single-page applications** using **TypeScript**, **RxJS**, and **Angular Material**, enhancing page performance and overall user experience.
- Built **modular, reusable UI components** with **Reactive Forms**, **RouterModule**, and **custom directives**, improving scalability and maintainability across multiple client projects.
- Integrated **RESTful APIs** using **Angular HTTPClient**, implementing interceptors, JWT-based authentication, and centralized error handling for secure communication.
- **Collaborated with backend engineers** to define API contracts, optimize response structures, and align Angular services with **Spring Boot** and **.NET APIs** for smooth data exchange.
- Configured **environment-specific builds** (dev, staging, production) using **Angular CLI** and automated deployments through **Azure DevOps pipelines**.
- Worked with DevOps teams to **deploy Angular builds on Microsoft Azure App Service and Azure CDN**, ensuring reliable and low-latency global access.
- Optimized performance with **lazy loading**, **route guards**, and **efficient change detection**, reducing initial load time by 30%.
- Participated in **Agile Scrum sprints** using **JIRA and Git**, performed peer code reviews, and ensured CI/CD compliance for consistent and high-quality releases.

EDUCATION:

- Bachelor of Engineering in Information Science and Technology from GRIET.
