PROFESSIONAL SUMMARY

Computer Science graduate student with 2+ years of full-stack development experience using Flask, Django, ASP.NET, ADO.NET, .NET Core MVC, and Angular with a proficiency in designing scalable web applications. Skilled in developing both user interfaces and server-side logic, and experienced in implementing authentication, database management, and API integrations. Certified in software development technologies with a strong foundation in algorithms and data structures.

EDUCATION

Texas Tech University Masters in Computer Science, CGPA: 3.92 Vasireddy Venkatadri Institute of Technology, affiliated by JNTUK Btech in Information Technology, CGPA: 3.5	Aug 2023 – May 2025 Aug 2018 – Jul 2022
---	--

TECHNICAL SKILLS

Languages: Python, Java, C#, TypeScript, SQL
Frameworks: Flask, Django, ASP.NET, ADO.NET, JSP, Spring boot
Web Technologies: HTML, CSS, JavaScript, Angular, Bootstrap
Databases: MySQL, Microsoft SQL Server, SQLite, JSON-Server
Tools & Platforms: Power BI, QT Designer, XAMPP, Git, Bitbucket, Atlassian, Microservices

WORK EXPERIENCE

Intellect design arena Software developer intern 2025 onwards	July
---	-------------

- Designing, developing, testing, deploy, maintain, and improve software using purple fabric full stack AI, Angular, Spring boot to design fintech client's requirements
- Designing and implementing RESTful APIs, using HTTP methods (GET, POST, PUT, DELETE)
- Error Handling status codes, and data formats like JSON and XML
- Implementing RESTful APIs and ensure seamless integration with front-end and back-end system
- Angular framework (components, services, modules, directives, two-way data binding)
- Core Java and Object-Oriented Programming (OOP) concepts
- SQL (DDL, DML) for database management and query optimization.
- Experience with AI-assisted IDEs such as Cursor, Copilot etc.
- Feedback from code review and apply changes to meet standards
- Working in Agile environments with paired programming practices, collaborative development approaches, and iterative delivery methodologies.
- Continuous integration platforms Jenkins
- Version control systems Git

NeverEnding Inc. Software Development Intern Enhanced functionality by designing improved system architecture and resolving feature misalignments based on business requirements. Documented the codebase enhancing code readability and maintainability. Worked on django framework as a backend resources by tracking, reporting user stories and also fixation of technical problems. Conducting research for problem solving to resolve issues.	May 2024 – Jun 2024
--	----------------------------

Virtusa Consulting Services Private Limited Associate engineer technology Handled a client project for "CITI Bank", enhancing the application by upgrading Angular functionalities and implementing new features. Engaged with issues by resolving them based on user's specification. Contributed to user stories assigned via Jira, consistently tracked progress through scrums, and collaborated using Bitbucket for version control. Contributed to an e-commerce application by working on data retrieval using ADO.NET in a .NET Core MVC environment, fetching product details to the application.	Jan 2022 – Jul 2023
---	----------------------------

The Tann Mann Gaadi Python Core Developer Intern Designed and implemented the user interface for a desktop-based OTT application using Python's PyQt5, integrating MySQL for storing and retrieving user data. Implemented an OTP-based user authentication system via email for secure user verification and access validation. Managed and coordinated frontend components using QtDesigner, enabling efficient interaction between UI elements and backend data resources.	Jun 2021 – Jul 2021
--	----------------------------

PROJECTS WORKED

Securing Federated Learning: A Cryptographic Defence against Privacy Attack – MIA link 2024 – Dec 2024	Sep
--	------------

- Performed the working functionality of FL setup, inducing client-server interaction. This usually involves n number of clients and a server, where server aggregates all the client models and produces out a global model. This global model is updated back to the clients (involves Fed-Avg algo).
- Worked on performing a Model Inversion Attack, its functionality, and noticed the vulnerability level towards reconstructing the client data.
- Produced a Unified Cryptography Defense against attack – Homomorphic Encryption, to protect the user from retrieving the data from the model updates. The defense HE encrypts model updates, the server performs Fed-Avg, and finally the global weights are decrypted, preventing from the attack to be performed.

Prediction of OTC Products and Exercise as Treatment Modalities for Knee Joint Pains Using Deep Learning link 2024 – Aug 2024	Jul
---	------------

- Worked on multi-class classification between algorithms Random Forest classifier and LSTM classifier and procured comparable results. The deep learning model – LSTM classifier generated an accuracy of 90%.
- Utilized this deep learning model to detect and predict various outcomes. Implemented multi-label classification using baseline model of multi-class classifier – acquiring good accuracy levels for prediction of OTC products and exercises.
- The huge data set is generated randomly by applying certain correlation criterion.

Identifying VAE-GAN Model for Latent Representation and Avoiding Overfitting for Denoising an Image link 2023– Dec 2023	Sep
---	------------

- Implemented Variational Auto-Encoder and Generative Adversarial Networks. Tested VAEGAN on number dataset and made an analysis on reconstructed of images in terms of quality. Analyzed VAEGAN again after introducing regularization technique.

- Introduced a regularization technique which reduces the test set loss and model gets trained quickly to get clutched to a stabilization procuring an adequate quality data as outcome, the dataset is “MNIST” where neural networks layer is built by using torch in python.
- Induced this process, for denoising the given noisy dataset, generating to achieve impactful results quickly by removing the noise to extract good pixel-oriented output

CareerX: A Comprehensive Student Recruitment and Internship Management System | [link](#) **Sep 2024 – Nov 2024**

- Formlated the initial phase of a Django-based application, implementing UI design, backend logic, and database integration for key pages using the MVT architecture. Utilized Django’s ORM to interact with the built-in SQLite database, performing migrations, loading data via the Python shell, and executing queries for validation and testing. Handled model creation and implemented CRUD operations across all data models.
- Conducted comprehensive testing of application functionalities, resolved backend bugs, and ensured smooth connectivity between models, views, and templates using Django’s built-in modules and database interaction tools.

Human Resources Management | [link](#) **Mar 2023 – May 2023**

- Executed HR management functionality using Angular, leveraging JSON-Server as a mock backend to perform operations on employee data. Utilized Angular services to manage API communications via HTTP GET and POST methods, ensuring smooth data retrieval and interaction across components.
- Produced core features such as add, view, update, and delete employee records; displayed payroll and skill-based analysis, and tracked attendance using modular Angular components.

Business Process Outsourcing Regulation | [link](#) **Oct 2022 – Nov 2022**

- Solely worked on the application enabling company-admin interaction with outsourced employees, implementing features such as employee management, task assignment, and issue tracking.
- Utilized ASP.NET for front-end development, ADO.NET for backend logic, and Microsoft SQL Server for data storage. Employed SqlConnection for database operations to connect UI with the backend, ensuring dynamic data rendering on ASP.NET pages.

Blog Mining and Emotion Argumentation | [link1](#) | [link2](#) | [link3](#) **Feb 2022 – Apr 2022**

- Designed and deployed a full-stack blogging website using Python Flask, implementing front-end with HTML, CSS, and Bootstrap, and integrating MySQL via XAMPP for data persistence. Created admin functionalities for blog management with robust backend routing through Flask and template rendering for UI integration.
- Utilized phpMyAdmin for database management and ensured data integrity by creating and restoring backups during XAMPP service interruptions.

Login Application for Authentication features | [link](#) **Sep 2021 – Nov 2021**

- Provided user authentication features for a Flask-based web application with MySQL backend, incorporating account creation and password reset functionalities via email verification.
- Facilitated user authentication via email verification using Flask, generating time-bound tokenized links for secure account validation. Applied cryptographic algorithm to encode passwords before storing them in the database, enhancing data security in a basic setup.

CERTIFICATIONS

- Programming, Data Structures and Algorithms Using Python in NPTEL (National Program for Technology Enhanced Learning) – Secured ELITE certificate
- Coursera – Programming for everybody, C for everyone; AWS Certification – AWS Academy Cloud Foundations; Brain bench Certification on ASP.NET
- Completed IBM Full Stack developer certification in Coursera - encompassing GitHub, React, Node.js, Flask, Django, SQL, DevOps, CI/CD, Docker, Kubernetes, Microservices.
