WORK EXPERIENCE

PROVIDENCE HEALTH PLAN Irvine, CA

Data Analyst

Jan 2025 – Present

- Optimized Tableau dashboard performance by restructuring SQL joins and materializing data into views, enabling Tableau to query pre-processed data and reduce dashboard load time by 30%.
- Mapped and validated EMR clinic files using SQL in SSMS by configuring file types, field layouts, and validation rules, ensuring 100% structural accuracy before integration with staging and enterprise systems.
- Implemented AWS Lambda-triggered weekly data refresh jobs for Redshift and S3, replacing manual query execution and reducing processing effort by 2+ hours weekly and ensuring up-to-date clinical data.
- Utilized and documented SQL and Excel validation scripts to detect duplicates, missing, and out-of-range data, reducing manual error checking time and improving report accuracy by 20%.

MATTEL, Irvine, CA

Oct 2024 – Jan 2025

Data Engineer

- Processed and cleansed 1M+ data daily from Anaplan by eliminating duplicates using row hashing in Ascend, improving data accuracy by 99%.
- Automated ETL pipelines in Ascend and BigQuery by incorporating data validation and error logging, reducing data processing errors by 40% and improving pipeline efficiency by 60% through early issue detection.
- Partitioned large datasets in BigQuery using time-based columns to optimize cost and performance, reducing data scan volume by over 70% for recurring queries.
- Developed production-ready Airflow DAGs with SLA monitoring, task dependencies, and integrated email alerts for failures, improving pipeline reliability and saving 2+ hours daily.
- Implemented a GitLab-based branching strategy with feature-specific branches and peer-reviewed merge requests, enabling smooth code reviews and controlled production deployments by the release team.

ZIONTECH SOLUTIONS, Irvine, CA

JUL 2023 – SEP 2024

Software Engineer

- Developed and maintained Python-based applications by aligning system logic with business requirements, improving delivery speed and reducing post-release bugs by 30%.
- Resolved critical software issues in production by implementing targeted bug fixes and long-term refactoring, leveraging CI/CD pipelines, which improved system uptime and reduced incident tickets by 35%.
- Implemented Git version control practices by committing changes regularly, and collaborating through merge requests, which improved code integration efficiency and reduced merge conflicts by 25%.
- Collaborated with QA and product teams using Jira for requirement tracking and automated testing frameworks to analyze requirements, detect defects early in the SDLC, and deliver bug-free releases.

NETAXIS IT SOLUTIONS, Chennai, India

APR 2019 – JUL 2021

Junior Software Engineer

- Built and reused front-end components using React.js and Material UI, learning to follow design guidelines and improving development speed by 20% while keeping the user interface consistent
- Maintained Python scripts using built-in modules and libraries like os and requests to support backend development tasks, improving code reliability and reducing manual debugging time.
- Documented release procedures and deployment steps in Confluence, contributing to clearer production workflows and reducing manual deployment errors by 25%.

EDUCATION

Wichita State University

Master's in Computer Science

Kansas, USA

SKILLS

- **Programming & Scripting:** Python, SQL, JavaScript (ES6), HTML5, CSS3
- **Frameworks/Libraries:** ReactJS, NodeJS, Material UI
- **Data Engineering & Pipelines:** Ascend, Airflow (DAG), ETL/ELT processes
- **Databases & Data Warehousing:** BigQuery, SQL Server (SSMS), Redshift, MongoDB, MySQL, PostgreSQL
- **Cloud & DevOps:** GCP, AWS (S3, Redshift, Lambda, SNS, IAM), Version Control (Git, GitHub, GitLab)
- **Tools & Technologies:** Postman, VS Code, Jira, Confluence
- **Data Analysis & Reporting:** Tableau, MS Excel, MS Word, MS PowerPoint
- **Certificates:** IBM Data Analyst
