

Steve Iqbal

Senior Software Engineer | Full Stack & AI

✉ steveiqbal01@gmail.com ☎ (786) 987-9568 📍 New York, NY, USA

PROFESSIONAL SUMMARY

Full Stack Engineer with 5+ years of experience building scalable, cloud-native applications and distributed systems. Expert in designing and deploying end-to-end web solutions using Node.js, React.js, Python, and Go across AWS, Azure, and GCP environments. Skilled in developing RESTful and GraphQL APIs, implementing microservices architecture, and managing data across MongoDB, PostgreSQL, and Redis. Experienced in containerization (Docker, Kubernetes), CI/CD automation, and real-time data streaming with WebSockets and Kafka. Adept at integrating LLM/AI tools (LangChain, OpenAI APIs) and optimizing performance for high-availability systems. Recognized for strong problem-solving, leadership, and cross-functional collaboration in fast-paced product teams.

TECHNICAL SKILLS

Languages: JavaScript, TypeScript, Python, Go (Golang), SQL, HTML5, CSS3.

Frontend Development: React.js, Next.js, Redux (Toolkit), React Hooks, Tailwind CSS, Material UI, Responsive Design, Webpack/Vite, Micro-Frontends.

Backend & Architecture: Node.js, Express.js, FastAPI, Flask, GraphQL (Apollo), RESTful APIs, gRPC, Microservices, Event-Driven Architecture, Serverless, WebSockets, System Design.

Data Engineering & Distributed Systems: Apache Spark, Kafka, Flink, Airflow, Ray, Databricks, ETL/ELT Pipelines, Data Modeling, Data Warehousing.

AI & LLM Technologies: LangChain, OpenAI API, AWS Bedrock, Retrieval-Augmented Generation (RAG), Vector Databases (Pinecone/Weaviate), Prompt Engineering.

Databases & Storage: PostgreSQL, MongoDB, MySQL, Redis, Snowflake, DynamoDB, Elasticsearch.

Cloud, DevOps & Security: AWS (EKS, Lambda, EC2, S3, CloudFormation, IAM), Azure (Data Factory, Synapse), GCP (BigQuery), Docker, Kubernetes (K8s), Terraform (IaC), CI/CD (Jenkins, GitHub Actions), OAuth2/JWT, SSO.

Monitoring & Tools: Prometheus, Grafana, Datadog, Temporal, RabbitMQ, BullMQ, Jira, Git/GitHub, Agile/Scrum Methodologies.

Testing & QA: Jest, Mocha, Cypress, PyTest, TDD (Test Driven Development).

PROFESSIONAL EXPERIENCE

Istream Solutions, Senior Full Stack Engineer

03/2023 – Present

- Drive the modernization of legacy systems into scalable event-driven Microservices and GraphQL federated architectures, ensuring seamless interoperability between internal data lakes and consumer-facing products.
- Engineer high-throughput, real-time communication layers using WebSockets and Redis Pub/Sub, optimizing data synchronization for collaborative, live-user environments.
- Technical initiatives to integrate Generative AI capabilities, leveraging LangChain and OpenAI to build context-aware conversational agents and RAG (Retrieval-Augmented Generation) pipelines.
- Enforce robust security postures and data governance standards, implementing RBAC, encryption-at-rest, and secure authentication flows to ensure strict adherence to GDPR and HIPAA compliance.
- Standardize engineering excellence by defining CI/CD workflows via Jenkins and GitHub Actions, automating testing strategies, and establishing rigorous code review protocols.

- Provide technical leadership and mentorship to distributed engineering teams, fostering a culture of best practices in system design, performance optimization, and scalable coding standards.
- Contributed to the full Software Development Life Cycle (SDLC) in an Agile environment, developing responsive, cross-browser compatible web applications using React.js and Express.js.
- Implemented pixel-perfect user interfaces (UI) based on design wireframes, ensuring mobile responsiveness and strictly adhering to accessibility (WCAG) standards.
- Developed and maintained server-side logic and database schemas, writing optimized SQL queries and stored procedures to handle core business data transactions.

Softeq Development Corporation, Full Stack Data Engineer

06/2020 – 02/2023

- Developed and optimized complex, data-intensive applications by combining Next.js for server-side rendering with high-performance Python and Node.js backend services.
- Designed highly efficient RESTful and GraphQL API layers to abstract complex database interactions across PostgreSQL, MongoDB, and internal data warehousing clusters.
- Implemented Infrastructure as Code (IaC) utilizing Terraform to provision, deploy, and manage containerized microservices on Kubernetes clusters across multi-region AWS availability zones.
- Enhanced system reliability and observability by integrating full-stack monitoring solutions with Prometheus and Grafana, establishing proactive alerting rules for production health tracking.
- Collaborated extensively with product management and design teams to translate business requirements into interactive, real-time data visualization dashboards and reporting tools.
- Collaborated on the implementation of REST APIs and third-party integrations, ensuring secure and efficient data exchange between front-end clients and back-end services.
- Wrote and maintained comprehensive unit and integration test suites using Jest and Mocha, significantly reducing technical debt and preventing regression bugs in production.
- Participated in code refactoring sessions and daily stand-ups, consistently troubleshooting and resolving critical software defects to improve application stability.

PROJECTS

AI-Powered Medical Document Processing System

- Designed and implemented an LLM-powered data pipeline for automated ICD code extraction, claims validation, and fraud detection from unstructured medical records.
- Integrated LangChain, OpenAI APIs, and Apache Spark Streaming to enable real-time contextual text extraction and semantic enrichment at scale.
- Developed a full-stack interface using Next.js and Node.js, with MongoDB for document storage and Redis queues for asynchronous data processing and task orchestration.

Real-Time AI-Powered Analytics Dashboard

- Engineered an intelligent real-time analytics platform using React, Node.js, and Kafka for streaming event processing and live data visualization.
- Integrated AI-driven anomaly detection using Python microservices with OpenAI embeddings to identify irregular trends in data streams.
- Deployed containerized services with Docker and Kubernetes on AWS, ensuring high availability and low-latency data delivery.
- Implemented Redis for caching, GraphQL for flexible data access, and WebSockets for instant client updates.

EDUCATION

University of Texas at Dallas,
Bachelors in Computer Science
(2020-Graduated)
