

SUBESHRAJA RAVI

Email: ravirs@umich.edu

Cell: 313-335-6105

SUMMARY

- Hands on experience with Analytics, Production Planning, Supplier Management and Manufacturing Technology.
- Created charts on data flow and Production flow with the **Visio** for **Production Flow and Crib allocation**
- Created User form with **Access** to record data on daily production, supply and purchases and used the information records for analysis using Excel and SPSS.
- Created data visualization dashboard with the help of **Excel Pivot Table** to view day to day sales and production flow to view the efficiency.
- Used **SPSS/Minitab to do forecast** on GDP, USD Vs INR currency value movement and Daily Usage on tooling usage.
- Used **R-Studio** to do sentimental Analysis on Industry based on Social Media Communication in twitter and its level of impact in the market share value and movement.
- Performed Order Point, Order Quantity and Yearly Turn calculation based on the plant usage to Categories the product to be either Vendor Owned Inventory or Vendor Managed Inventory.
- Designed Part drawings and BOM for the supplier based customer drawing to outsource certain operation in manufacturing practice using software like **SolidWorks and AutoCAD**.
- Worked with the ERP software **Acclaim** and Inventory Management Software **Crib master** to the deep level of understanding the system formulation and Work process.
- Performed Analysis on daily report to published in SharePoint to Validate the Data.
- Quick learner and effective team player.
- Outstanding academic qualification with consistent performance in educational degrees such as mechanical engineering, business and supply chain management.

SKILLS

Software	Analysis	Mechanical	Professional Software
	• Mini Tab • SPSS • R – Studio • Tora	• Auto CAD • Pro – E or Creo • ANSYS • Solid Work	• Access • Visio • Microsoft office • Tableau • Crib master • Acclaim • SAP
Other Skills	• Organization Management • Negotiation with Supplier • Data Analysis and Interpretation		• Problem Identification • Attention to Details • Communication • Team Building and Management

WORK EXPERIENCE

EWIE CO., INC. — Logistics Analyst, Ann Arbor, USA

March 2016- March 2018

- Maintained data integrity in both customer facing and ERP system.
- Helped in new customer launches and creating process to satisfy the SOW contracts.
- Used predictive forecasting to plan the level of inventory to stock item so facilitate the production in customer location.
- Coordinating with Buyers and procurement analyst on making purchasing decision based on hand inventory on different warehouse location.
- Created Excel Templates to identify critical item to be ordered, by also considering the On-Hand of New and Regrind along with the projected On-hand base on the Open Purchase order Confirmation date.
- Crib Bin Allocation and Management. Also performing Analysis on the turns and fill rate.

EWIE CO., INC. — Business Analyst, Ann Arbor, USA

March 2016- March 2018

- Participated in Business Process Management group efforts to collect and analyze metrics and continually improve processes owned by the group. Also did root cause analysis in order to recommend product enhancements or other appropriate actions to improve productivity for both the business units and IT.
- Carried out price analyses along with the demand data to have the accurate impact calculated and presented pricing analysis for management with recommendation.
- Processed EDI Order and did the EDI trouble shooting if came across any.
- Estimated Financial Impact.
- Managed Vendor Owned Inventory [VOI] (Consigned) and Vendor Managed Inventory
- Analyzed lead time deviation.
- Calculated Order Point and Economic Order Quantity.

Internship— Johnson & Johnson Pvt. Ltd, Chennai, India

May 2014-June 2014

- Worked along with the distributor sales team to collect data on fast moving products and customer preference from leading super markets.
- Performed statistical analysis on Product Visibility and Its Impact in Self-Service Retail Store for Johnson & Johnson Products.
- Created dashboard to visualize the daily product movement based on shelf position.
- Based on the study sales representative visit to retail supermarket and required visibility level is determined.

Management Trainee -Indo Royal Engineering (P) Ltd., Chennai, India

May 2013-May 2014

- Validated company's data and problems with manual collection and storage of information with respect to daily production planning.
- Developed a database for the first time in the company which proved to be a major transformation to the business with the help of access and connected it to SQL server.
- Creating production benchmark along effective cost analysis and cost control system using excel.
- Handled outsourcing by acting as buyer representative for the company and also acquired new supplier relationships.
- Achieved good profit margin along with on time delivery to the customer by accomplishing contract between supplier and customer.

Engineer— Royal Engineering - Chennai, India

January 2010-December 2011

- Analysis to develop ergonomic production and workstation to make production more effective. Also Designed and developed jigs and Fixture.
- Part of production planning and operation decision making along with in-house tool inventory management.
- Assisted purchasing and order fulfilment. Also handle on Bill of Materials (BOM) and process flows.

ACADEMIC RESEARCH

2015 Consultation to **Standardize and Structure the Information and Information Flow for a Small Scale Industry.**

This project is to suggest a small scale industry in India can effectively perform the ERP by utilizing databased electronic record rather than using paper recording system. Since the ERP planning is interrelated with all parameters in the organization from purchasing of raw material to the dispatch of finished goods. For this the existing system of MRP and ERP of the organization is analyzed which is done by paper recording along with considering common errors. A systematic standardized data flow along with common data base is suggested by using Access considering the implementation time required.

2015 Case Study: International Textile Company Ltd. (**Supply Chain Analysis Problem**):

This case study is done to obtain optimistic result to have minimum production cost and network to transport cost (logistics) based on the given data of production facility location, demand, cost of production, cost of transportation and distribution center. Which is oriented to business analysis and interpretation of results or numbers from the case with the business perspective.

Tools Used: *Excel (Goal Seek, sensitivity analysis, Linear programing)*

2014 – 2015 Participated in **three different simulation game on Supply Chain Management.**

Game I: Identifying perfect distribution network node based on the demand and density of the customer location in the region. So that overall profit should be obtained high with minimum investment.

Game II: Negotiation for sourcing with supplier and competitors. Also decision making on sourcing based on price, lead time, bank interest and payment time.

Game III: Networking decision of warehouse location and manufacturing plant location. Based on the random sale which has to be predicted from the previous year sales data, lead time to transport transportation and cost for transportation in same region and in different region.

2014 Study on the **Apple Watch Sustainability and Potential Success.**

This study focus on the status of the evolution of smart-watches, the current smart watch market, the main competitors, previous year's sales, future sales projections for the Apple Watch, and how the Apple Watch will thrive in this relatively new market. Furthermore, the report will also seek to answer the imperative question of how will Apple use its past successes, resources, and strides for advancement in the mobile technology field to gain an advantage in the marketplace.

2014 Study on **Omni Channel Retailing**

This Study is conducted to analyses how the distribution center or warehouse can be used effectively when the Omni channel retailing moves to brick and motel stores and vice versa. We considered parameters such as reverse logistics, inventory management and low safety stock benefits can be obtained through it. Mostly this study is done by the brain storming and SWAT analysis done with the data and materials which were available on World Wide Web.

2014 Study on **Product Visibility and Its Impact in Self-Service Retail Store for**

Johnson & Johnson Products.

To analyze product visibility and its impact in self-service retail store I worked with the regional distribution center sales man to check the available inventory of the SKU products in shelf and in warehouse of the store and the value of sales. By this analysis we were able to understand the relativity of sales due to the safety stock and products shelf position. Also the desired level of safety stock and distribution pattern should be generated through level of sales to maintain low safety stock and to minimize the lead time.

Tools Used: SPSS, Questioner, Excel.

2013 Study On Victor Vroom's Theories of motivation and its impact on Faculty Performance.

A detailed study of Victor Vroom's theory of motivation was done which helped us in preparing a questionnaire to all the Staffs of VIT-Business School - Chennai Campus. This project will help the Admin of VIT to know how the concepts of VALANCE, INSTRUMENTALITY and EXPECTANCY influence their Staffs. We successfully completed the study by analyzing the correlation between the parameter from the collected data from the staffs.

Tools Used: SPSS, Google Form, Excel

2013 Design and Fabrication of Special Purpose Serration Machine for Valves.

This project is done during my bachelors. My self my team members designed “**Special Purpose Serration Machine for Valves**” by using software SolidWorks to create diagrammatic representation of the parts, to create (BOM) Bill of Materials and ANSYS to analyze the safety load. After analyzing the parameters of requirement of a special purpose machine. During the design phase we even calculated the load on the machine and also analyzed with ANSYS to ensure the safety load of the machine. Later we fabricated the machine with the help of technician and test run the machine

Tools Used: SolidWorks, ANSYS, Design Data Standards

2012 Design and Fabrication of Six Legged Kinematic Moving Machine (Locomotive Machine).

Design and fabricated project based on four joint kinetic moving mechanism.

Tools Used: Pro-E, Design Data Standards.

EDUCATION

Master of Science (Supply Chain Management):

August 2015

University of Michigan - Dearborn

- IT in Supply Chain Management (SAP)
- Applied Forecasting
- Management Science Using Solver
- Lean and Six Sigma
- IT Policy and Strategy
- Strategic Sourcing
- Supply Chain Management
- Supply Chain and Logistics Management

Master of Business Administration (General Management):

August 2014

VIT University- Tamil Nadu, India

- General Management
- Quantitative Techniques
- Production and Operations Management
- Financial Management
- Human Resource Management
- Business Research Methodology
- Strategy Formulation and Implementation
- Marketing Management

Bachelor of Engineering (Mechanical Engineering):

May 2013

Anna University – Chennai, India

- Manufacturing Technology
- Thermodynamics
- Gas Dynamics
- Finite Element Analysis
- Heat and Mass Transfer
- Strength Of Materials
- Automobile Engineering
- Maintenance Engineering
- Strategy Formulation and Implementation
- Dynamics of Machinery
- Cost Estimation and Production Planning
- Fluid Mechanics
