Education

Masters | New York University | New York City, NY

GPA: 3.3

Bachelors of Science Computer Science | New York Institute of Technology | New York City, NY

GPA : 3.7

Experience

Software Engineer Contractor | 04/2024 - 05/2025 | Randstad | Charlotte, NC

- Designed and developed Spring Boot microservices and REST APIs in Java to support high-volume, distributed data lake operations for AWS lake Services @ Amazon.
- Built and optimized scalable backend services leveraging AWS technologies (DynamoDB, S3, Lambda) to handle mission-critical workloads.
- Resolved critical production bugs, implemented robust logging and monitoring, and improved error-handling across microservices for 24/7 reliability.
- Collaborated in an Agile Scrum team, delivering features through iterative sprints and ensuring alignment with business requirements.
- Partnered with cross-functional engineers to debug and profile complex performance issues, reducing system latency and improving uptime.
- Applied CI/CD pipelines to automate builds, testing, and deployments, accelerating delivery and maintaining code quality.
- Invested ~10% of time into exploring Kotlin migration paths and building Spring MVC web apps, gaining hands-on experience with modern JVM ecosystems and hybrid codebases.

Software Engineer - Full Stack | 05/2022 - 04/2024 | Motorola Solutions | Remote, NC

- Developed backend APIs in Java Spring Boot to support mobile and web clients, implementing business logic, authentication, and data services.
- Integrated Kafka for Twillio's event-driven messaging and asynchronous processing across distributed services.
- Designed and optimized database persistence layers with Hibernate, working with both MySQL and PostgreSQL to ensure reliable data access.
- Refactored legacy frontend applications from Twig, HTML, CSS, and raw jQuery into React with modular, reusable components, improving maintainability and scalability.
- Implemented scheduled tasks in Spring Boot (cron jobs) to automate recurring operations such as data synchronization and reporting.
- Managed application deployments using DeployBot, ensuring smooth and consistent releases across staging and production environments.
- Collaborated with cross-functional teams in an Agile environment, conducting code reviews, troubleshooting issues, and delivering high-quality features on schedule.

Software Engineer Co-op - Location Services | 01/2022 - 05/2022 | Amtrak | Remote, NYC

- Developed and enhanced a Go-based location services library, enabling accurate real-time tracking and integration with Amtrak systems.

Software Engineer Intern - Parrot Drone | 05/2021 - 08/2021 | Motorola Solutions | Remote, NYC

- Developed backend microservices in Java (Spring Boot) to process drone telemetry data and ensure system reliability and containerized services with Kubernetes.

Skills

Android, Java, Spring Boot, Kotlin, PHP, Laravel, Java, CI CD, Docker, AWS, Github, Git, React, My SQL, GraphQL, Hibernate, JDK, JVM, Kubernetes, MVC, Deploy bot, Typescript
