

SUCHARITHA THOTA

Dallas, TX 75220 | 623-265-8620 | thotasucharitha9@gmail.com | linkedin.com/in/sucharitha-thota

EDUCATION

Master's in Information Technology and Management The University of Texas at Dallas	May 2023 - Dec 2024(US)
Bachelor's in Computer Science and Engineering Jawaharlal Nehru Technological University Hyderabad	May 2015 - Jun 2019 (IN)

SKILLS

- Programming Languages:** SQL, Python, HTML, CSS
- Data Tools & Platforms:** Tableau, Power BI, Advance Excel (Pivot Tables, VBA, Power Query), Google Analytics, Salesforce CRM
- Databases & Technologies:** MySQL, PostgreSQL, AWS (EC2, S3, Lambda), ETL Processes, Linux
- Certifications:** Lean Six Sigma, Python, AWS Practitioner, Salesforce Admin, IBM Generative AI, Excel Skills for Business
- Core Competencies:** Requirements Gathering, Process Improvement, Project Management, Stakeholder Communication

PROFESSIONAL EXPERIENCE

Data Analyst –Murthy Technologies LLC	Feb 2025 – Present (US)
- Collaborated with the ITSM team and key stakeholders to enhance audit accuracy and operational efficiency, leveraging Lean Six Sigma methodologies to drive process improvements and optimize data workflows. - Conducted data mapping, data cleaning, and exploratory data analysis (EDA) to preprocess and transform raw data, ensuring consistency and accuracy before model development and predictive analysis. - Implemented the DMAIC (Define, Measure, Analyze, Improve and Control) methodology to identify inefficiencies, improve incident audit accuracy, and establish data-driven decision-making frameworks, leading to a 25% improvement in process efficiency. - Performed text classification on unstructured data using Natural Language Processing (NLP) techniques, enabling automated categorization of incident reports and improving issue identification and resolution accuracy. - Developed an advanced analytical model that increased data accuracy to 90%, optimized incident audits on ServiceNow, and reduced Root Cause Analysis (RCA) time by 20%, implemented a severity-based ticket prioritization framework, categorizing audits based on urgency to optimize incident management. Integrated this system with interactive dashboards, enabling teams to efficiently filter and address high-priority tickets in real-time, streamlining workflows and reducing resolution time by 60%. - Designed and automated ad hoc reporting solutions, providing leadership with actionable insights on service performance, incident trends, and process bottlenecks, leading to improved strategic planning and operational outcomes.	
Business intelligence analyst – Turito	Jan 2021 – Apr 2023(IN)
- Developed and automated a performance tracking solution using Excel VBA and SQL that captured real-time student attendance and engagement metrics across multiple live sessions, reducing manual reporting efforts by over 40% and providing accurate data for academic and operational decision-making. - Built, maintained, and enhanced Tableau dashboards to visualize key performance indicators such as learning outcomes, student dropout rates, and session-level analytics, enabling academic leadership to identify early warning signals, intervene proactively, and improve student retention rates. - Partnered with backend engineering teams to analyze and resolve ETL pipeline bottlenecks by implementing data flow optimizations and error-handling mechanisms, which improved data delivery speed and increased reporting reliability by 25%, ensuring timely availability of insights during high-volume live class sessions.	
Data Analyst – Amazon	Sep 2019 – Dec 2020(IN)
- Engineered and automated interactive dashboards in Power BI and Excel (VBA, Pivot Tables, Power Query) to consolidate payroll and workforce data across multiple sources, cutting manual reporting time by 40% and providing executives with timely, data-driven insights for strategic decision-making. - Designed, developed, and optimized SQL-based data validation pipelines to identify anomalies, streamline reconciliation processes, and reduce payroll discrepancies by 25%, directly strengthening compliance with corporate governance and external audit requirements. - Implemented trend analysis and anomaly detection techniques on large-scale employee datasets using advanced Excel and SQL, uncovering hidden patterns that improved reporting accuracy and supported predictive workforce planning and resource allocation. - Standardized data quality and validation frameworks across HR, IT, and Operations by establishing governance rules, automated checks, and error-handling workflows, enabling proactive issue resolution and minimizing recurring payroll escalations. - Streamlined end-to-end payroll and workforce data workflows by optimizing ETL processes, automating recurring tasks, and integrating cross-functional systems, which reduced payroll cycle time significantly while ensuring alignment with compliance and audit standards.	

ACADEMIC PROJECTS

Supply Chain Management Alert System – UnicGate	Aug 2024 – Dec 2024(US)
- Led the end-to-end development of a web-based alert system to connect doctors, specialists, and pharmaceutical suppliers, improving rural healthcare delivery for rare diseases and medicine shortages. - Designed the system architecture using JSP, MySQL, and Apache Tomcat (MVC model), enabling real-time communication and alert-based coordination between hospitals and suppliers. - Developed modules for disease identification through symptom tracking, automated medicine requests, and a disaster management database for specialist-driven treatment guidance.
