

Sujana Chamarty
Business/Data Analyst
sujanachamarty@gmail.com / (405) 430-1244

Professional Experience

- Analyst with 8+ years of expertise in product management and data analytics, leveraging Python, Azure Databricks, and Power BI to drive strategic insights, optimize business processes, and enhance decision-making. Adept at managing complex projects, improving data quality, and collaborating with cross-functional teams.
- Product Lead and Data Analyst in Agile development teams, gathering and documenting business requirements, analyzing system functionality, and ensuring seamless integration across platforms by coordinating with interdependent teams to align with business goals.
- Expert in user story creation, functional analysis, and technical documentation, collaborating with engineering teams to meet system requirements while delivering clear, concise documentation for technical and business stakeholders using standardized templates.

Technical Skills & Certifications

- **Tools:** PostgreSQL, Tableau, Power BI, Agile, Excel, GitHub, Jira, Confluence, ITRS monitoring tool, Team Dynamix, ServiceNow
- **Certifications:** SAFE 5 Agilist from scaled agile, Inc. Product Manager, Google Analytics
- **Programming:** Python, SQL, SAS, R, NoSQL, ECL, SPSS

Work Experience

LexisNexis Risk Solutions, USA

Analyst

Feb 2023 – July 2025

- Gathered and documented business requirements through workshops, stakeholder interviews, and Jira story creation, ensuring technical solutions aligned with business objectives and compliance needs.
- Managed Agile projects using Scrum and Kanban in Jira, overseeing story and epic tracking, coordinating code migrations and release management with operations teams, and supporting GitHub code migration to ensure smooth, stable, and compliant delivery across multiple workstreams.
- Developed Power BI dashboards to visualize ETL pipeline outputs, track data quality metrics, and deliver actionable insights to business stakeholders, enhancing decision-making and operational reporting.
- Deployed ETL pipelines to process customer background and PII data from Azure Blob Storage as Avro files and used Scala and Python in Databricks to create structured tables and designed interactive Power BI dashboards to assess data authenticity and confidence levels.
- Collaborated with cross-functional teams including data engineering, QA, product management, and compliance to refine requirements, resolve data discrepancies, and validate dashboard outputs against source systems.
- Engineered Python-based mini applications to parse and scrape customer data from private service websites, ensuring secure data population in compliance with Data Governance and Security policies.

AT&T and DirecTV, USA

Data Analyst

August 2022 – Feb 2023

- Collaborated with product owners and business stakeholders to gather data requirements, align KPIs with business goals, and translate analytics findings into actionable business insights for product enhancement.
- Analyzed over 2 million records of live sports viewership and user preferences data across teams and platforms to uncover key audience trends and delivered insights that led to 3 application feature developments to improve customer engagement
- Implemented 5 interactive Tableau dashboards by extracting video analytics data from Snowflake and New Relic, providing leadership with visibility into sports content performance and competitor analysis

USAA, San Antonio, Texas, USA

Data Scientist, Marketing domain

Data Analyst

Dec 2020 – August 2022

August 2020 – Dec 2020

- Partnered with marketing and product teams to gather business requirements, define campaign KPIs, and align data models with strategic objectives, ensuring analytics outputs directly supported decision-making.

- Extracted and analyzed web analytics data from SQL Server to identify user browsing and purchasing patterns, and built interactive Tableau dashboards showcasing insurance product performance, campaign effectiveness, and customer segmentation insights.
- Developed and evaluated SAS-based machine learning models, including regression and logistic regression models, for customer risk assessment and marketing response prediction, contributing to business decision making.
- Conducted stakeholder meetings to discuss data findings, validate business needs, and recommend actionable strategies, bridging the gap between analytics insights and marketing execution.
- Extracted and analyzed web analytics data from SQL Server to identify user browsing and buying patterns and provided real-time insights on the best performing insurance products and marketing strategies using Tableau dashboards
- Evaluated and documented SAS-based machine learning models for risk assessment of marketing strategies, ensuring compliance with model governance standards and contributing to a user base growth of 1,500+ within 6 months through optimized targeting

Love's Travel Stops, Oklahoma, USA

Business Analyst

June 2020 – August 2020

- Interpreted business trends and customer loyalty data using Einstein Analytics and automated manual scorecard analysis workflows, transitioning from Excel to interactive dashboards in Tableau for improved efficiency and insight delivery.
- Resolved Salesforce cases by leveraging call log transcriptions from CISCO and created 4 different stakeholder-ready reports and presentations that summarized key findings, supported strategic planning, and demonstrated research impact.

Department of Business, University of Central Oklahoma

Analyst, Graduate Research Assistant

June 2019 – June 2020

- Forecasted likelihood of early adoption of digital banking applications by analyzing mobile and financial data using SAS, SPSS, and spreadsheets and a random forest model with an accuracy of 93% in SAS Enterprise Miner
- Delivered actionable insights through Tableau dashboards, prioritizing research requirements and presenting key findings at each project stage to support strategic decision-making and enhance digital transformation initiatives

Department of Information Technology, Edmond, Oklahoma

Information technology

Jan 2019 – June 2020

- Managed automated ETL/reporting systems, handled ticket creation and resolution in TeamDynamix, while gathering, documenting, and prioritizing customer requirements to create detailed user stories and acceptance criteria for support teams.
- Provided technical and software assistance to students and staff, resolving customer service requests, incidents, and phone inquiries, while supporting a computer lab environment by troubleshooting the latest software and technical errors.

Tata Consultancy Services, Mexico City, Mexico (Onsite)

Sr. Business Analyst, Client- CITI Bank

December 2014 – Dec 2018

- Managed a team of 4 to increase operational efficiency of applications by 30% over 14 months by conducting Excel analytics on ticket lifecycle data from ServiceNow to generate actionable insights and deliver performance reports to cross-functional stakeholders.
- Gathered and analyzed business requirements from technology and compliance teams, translating them into functional specifications and process workflows for application performance monitoring and access control compliance.
- Facilitated requirement workshops, stakeholder meetings, and cross-team discussions with global teams to ensure alignment between technical deliverables and regulatory/business needs.
- Conducted gap analysis and impact assessments for proposed changes in monitoring and reporting systems, providing recommendations to improve process efficiency and compliance readiness.
- Designed and implemented an automated ETL pipeline to collect log data from Apache Splunk and developed a Python-based Selenium script to automate access control testing for nearly 100 web applications, improving system visibility, reducing manual reporting, and achieving a 90% reduction in testing time, resulting in an estimated \$120,000 in quarterly savings.

Education

Master of Science, Business Analytics with President Honor Roll.

GPA 4.0

(University of Central Oklahoma, Edmond, Oklahoma)

July 2020

Bachelor of Technology, Mechanical Engineering

Score: 84%

(GMR Institute of Technology, Andhra Pradesh, India)

May 2014
