

SUJEETH REDDY CHEVULA

FULL STACK DEVELOPER

Email: sujeeth.chevula@gmail.com

Contact: +1(806)464-3585

LinkedIn: [linkedin.com/in/sujeethreddyc](https://www.linkedin.com/in/sujeethreddyc)

PROFESSIONAL SUMMARY

- Full Stack Developer with 5 years of experience in **.NET, C#** specializing in the **architecture, design, and development** of enterprise applications. Adept at building and **integrating** complex systems, ensuring high performance, scalability, and reliability throughout the **development lifecycle**.
- Expertise in **.NET technologies (ASP.NET, ASP.NET Core, MVC, Web API, ADO.NET, Entity Framework, LINQ, Razor Pages, SignalR, Blazor)**.
- Designed and developed dynamic user interfaces using **JavaScript** frameworks and libraries such as **Angular, React.js, Vue.js, jQuery, Bootstrap, AJAX, Node.js, and Express.js**.
- Substantial experience with messaging systems like **Apache Kafka, RabbitMQ, ActiveMQ, and Azure Service Bus** for real-time data processing pipelines.
- In-depth knowledge of relational databases (**SQL Server, MySQL, PostgreSQL**) and NoSQL databases (**MongoDB, Cassandra**). Skilled in writing complex **SQL queries, stored procedures**, and using **ORM** frameworks like Entity Framework and Dapper.
- Deep knowledge of **design patterns** such as **MVC, Singleton, Repository, Factory, and Observer**, applying them to build scalable and maintainable applications. Expertise in **unit and integration testing** using **MSTest, NUnit, Moq, Selenium, Postman** and **Swagger**.
- Hands-on experience with **CI/CD** pipelines and automation tools like **Jenkins, Azure DevOps, GitLab CI**, and **Ansible**.
- Implemented advanced **security features** such as **JWT authentication, OAuth 2.0, and Role-Based Access Control (RBAC)** within **.NET** applications.
- Skilled in cloud-native development and deployment using **AWS (Lambda, API Gateway, EC2, S3, DynamoDB, RDS, Cloud Watch, IAM, CloudFront, VPC), Microsoft Azure (Functions, Blob Storage, SQL Database, Virtual Machines)**, and container orchestration using **Docker, Kubernetes**, and Pivotal Cloud Foundry. Proficient in Infrastructure as Code (IaC) with **Terraform**.
- Adaptable to diverse methodologies including **Agile (SCRUM), Waterfall**, and Test-Driven Development (TDD). Proficient in Agile Methodology, utilizing **JIRA** for streamlined task assignment, bug tracking, and effective issue resolution.
- Experienced in using **ELK Stack** (Elasticsearch, Logstash, Kibana) for centralized logging and data visualization, **Splunk** for in-depth log analysis and querying, **DataDog** for monitoring and observability, and **Prometheus** for system performance metrics and alerting, effectively optimizing system performance and troubleshooting.
- Known for being a **team player**, with excellent collaboration skills and the ability to adapt to new technologies quickly. Strong **communication skills**, ensuring effective interaction with clients, stakeholders, and cross- functional teams to meet business requirements.

TECHNICAL SKILLS

- **Programming Languages:** C#, Java, C++, PL/SQL, Python, Go
- **Web Technologies:** HTML5, CSS3, JavaScript, AJAX, JSON, Bootstrap, jQuery, Angular 4/6/8/9, React JS with Flux, Redux, Ember JS, PHP, Backbone JS, Vue.Js, NodeJS, Django, Express JS, Web Sockets, Flask
- **Application/Web Servers:** Oracle Web logic, IBM Web Sphere, JBoss, Glassfish, Apache Tomcat

- **C# Technologies & Frameworks:** ASP.NET MVC, ASP.NET Core, Web API, WCF, Entity Framework, ADO.NET, REST, SOAP, JSON, XML, LINQ, Dapper, .NET Framework, .NET 5/6, C#, ASP.NET Web Forms, Razor Pages, Blazor, SignalR, Dependency Injection, Microservices Architecture, Windows Communication Foundation (WCF), IIS, OData
- **Databases:** Oracle 8i/9i/10g/11i, DB2, SQL Server, MYSQL, MongoDB, Cassandra, Redis, Elasticsearch, Cosmos
- **Messaging Services:** JMS, Active MQ, Rabbit MQ, IBM MQ, Apache Kafka
- **Web service frameworks:** JAX-RS, JAX-WS, Apache CXF, Axis, Jersey
- **Software Methodologies:** Agile, Scrum, TDD, Waterfall, BDD
- **Build & Configuration Tools:** Ant, Maven, Gradle, Jenkins, Bamboo Gulp, MSBuild, Grunt, Webpack, NPM, Bower
- **Testing Tools:** Junit, TestNG, Mockito, Jasmine, Karma, Mocha, Chai, Protractor, SOAP UI
- **Version Control Tools:** GIT, SVN, GitLab, Bitbucket, TFS
- **Project Management Tools:** JIRA, Rally, Microsoft Project, Atlassian, Confluence
- **Cloud Technologies & DevOps Tools:** AWS - EC2, EBS, S3, ECS, EKS, SQS, RDS, SNS, Glacier, Lambda, PCF, Docker, Openshift, Kubernetes, Azure, Azure App Service, AKS, Azure Blob Storage, Azure Functions, GCP, ArgoCD, Chef, Puppet, Rancher, Ansible, Terraform
- **Operating System** Windows, Linux, Unix, MAC, MS-DOS
- **IDE's** Eclipse, Visual Studio, IntelliJ, Spring Tool Suite, Sublime Text, WinSCP, Putty

PROFESSIONAL EXPERIENCE

Client 1: Fidelity Investments, Dallas, Texas, USA

(July 2023 - Present)

Role: Full Stack Developer

- Collaborated on the migration from a monolithic architecture to microservices, defining boundaries and integrating **ASP.NET Core** RESTful services, batch processing, and service-oriented architecture (SOA) to improve fault tolerance, performance, and system integration.
- Implemented real-time web application using **Blazor**, incorporating **SignalR** for live data updates and interactive user experiences.
- Collaborated with business analysts and system architects to convert **business requirements** into **API** designs using both **RESTful APIs** and **GraphQL**, resulting in a 30% improvement in data retrieval efficiency and a 25% reduction in API response times.
- Developed and optimized dynamic web applications using **ASP.NET Web Forms**, implementing custom controls, data binding, **AJAX** integration, and efficient state management to enhance performance and user experience.
- Optimized application performance and scalability, enhancing response times by 40% to handle high transaction volumes and real-time data processing.
- Utilized **Angular** and **TypeScript** for Single Page Application (SPA) development, incorporating modules, services, controllers, state management, and custom directives, resulting in a 25% boost in performance and maintainability.
- Leveraged **MSBuild** and **Azure DevOps** for build processes, along with **GitHub** for version control, increasing development and deployment efficiency by 30% and reducing build times by 25%.
- Automated deployment pipelines with **CI/CD** tools (e.g., **Jenkins**, **Azure DevOps**) integrating **Docker**, **Kubernetes**, and **Terraform** for end-to-end **DevOps**.
- Developed comprehensive unit and performance tests using **xUnit**, **NUnit**, and **JMeter**, with Moq for mocking and **SonarQube** for code coverage, improving code quality and reducing bugs by 30%. Conducted code reviews to ensure adherence to best practices.

- Managed Azure resources including **Azure Functions, Blob Storage, Virtual Machines, SQL Database, Load Balancer** and **VNET**, achieving a 20% reduction in system downtime by implementing auto-scaling and monitoring with Azure Monitor.
- Built **microservices** with ASP.NET Core, **Entity Framework**, and **SQL Server**, and designed **SOAP** based .NET Web Services using **WCF**. Deployed applications on **Azure App Service** and **Docker** and utilized **C#** for backend development and **Power BI** for data visualization.
- Integrated **Azure API Gateway** to manage traffic routing, improving system availability and performance during high-traffic periods.
- Utilized **Azure Blob Storage** for securely storing large datasets, including patient records and medical images, ensuring compliance with data privacy law.
- Integrated **Apache Kafka** for real-time data processing, allowing the system to handle live updates and alerts related to patient care and hospital operations.
- Automated reporting services with **SSRS** based on data validation and Entity Framework, and **configured backups, alerts, and monitoring** for SQL Server clusters using SQL Server Management Studio (SSMS).
- Leveraged **Splunk** for advanced log analysis, utilized **AppDynamics** for comprehensive application performance monitoring and service impact assessment, and employed **Unix** commands for system diagnostics and log management, enhancing operational efficiency and minimizing downtime

Client 2: HCA HealthCare, Nashville, TN, USA

(Jan 2023 – June 2023)

Role: Full Stack Developer

- Successfully led the migration initiative, transforming legacy **SOAP** services into modern **RESTful** web services using .NET Technologies.
- Enhanced system agility and improved interoperability by leveraging **ASP.NET Web API** and **.NET Core**, facilitating smoother integration and more efficient service management.
- Integrated **Redis**-based distributed caching into the microservices architecture, collaborated cross-functionally, and optimized **Entity Framework** and complex **SQL queries**, resulting in a 30% reduction in query execution time.
- Utilized **RabbitMQ** within the microservices architecture and implemented the **SAGA** design pattern, resulting in a 20% decrease in **transactional failures** and a 15% improvement in overall system reliability.
- Employed advanced **React** hooks, conditional rendering, **React Hook Forms**, **React Router**, and **Context API** for efficient state management; developed web and mobile applications with **React JS** and **ES6**, enabling server-side and client-side rendering with **React Native** and **Redux**.
- Set up **Git** for version control and **Bitbucket** for repository management, orchestrating application deployment on **AWS**. Utilized **AWS EC2, RDS, S3, ELB, CloudWatch**, and **Secrets Manager**, leading to a 30% boost in deployment efficiency, a 25% reduction in downtime, and enhanced security.
- Contributed to Big Data integration and analytics utilizing **Hadoop**, **SOLR**, **Spark**, **Kafka**, **Storm**.
- Adopted Agile methodologies and **Scrum** practices to drive development cycles, focusing on **Behavior Driven Development (BDD)** using **Cucumber** Gherkin for defining test scenarios. Conducted comprehensive UI testing with **Selenium** and **Firebug** to ensure high-quality user interfaces and enhancing test coverage and accuracy.
- Performed API testing using **Postman** and **Swagger** UI to verify the functionality of health-related APIs and ensure proper data exchanges
- Managed project tasks and tracked progress using **JIRA**, ensuring all deliverables were completed on time and met high-quality standards.
- Implemented the **ELK Stack (Elasticsearch, Logstash, and Kibana)** to enhance logging and system visibility, improving log monitoring and analysis. Achieved a 15% reduction in downtime through better early issue detection, more efficient trouble-shooting, and improved system performance.

Client 3: JPMorgan Chase

(Dec 2020 - Aug 2022)

Role: Full Stack Developer

- Designed, developed, and implemented scalable and secure **.NET** applications utilizing **C#, ASP.NET**, and RESTful APIs, ensuring seamless performance and data security, resulting in a 15% increase in user satisfaction.
- Designed and implemented **microservices** architecture to modernize the bank's internal applications, improving their ability to scale and adapt.
- Integrated various **third-party APIs** and data sources, including REST APIs and Kafka, using ASP.NET Core and ASP.NET Web API to enhance platform functionality and enrich user experience.
- Managed and automated **ETL** processes using SQL Server Integration Services (**SSIS**), including scheduling and monitoring job execution, optimizing workflow efficiency, and ensuring seamless data integration across systems.
- Responsible for creating and executing **data migration scripts** in production using **SQL** and **Python** to adapt new features without any data loss.
- Developed authorization and authentication services using ASP.NET with **LDAP** integration and later transitioned to **Azure Active Directory** for **Single Sign-On (SSO)**, improving security and streamlining user access management.
- Migrated legacy systems to **Azure Cloud**, taking advantage of **Azure Functions** for scalable, serverless computing and **Azure Logic Apps** for workflow automation.
- Implemented **Apache Kafka** for real-time messaging to update and synchronize various bank services, such as notifications and alerts related to public health and safety.
- Managed database connectivity with Entity Framework and **ADO.NET** and used **OpenAPI (Swagger)** for REST service documentation.
- Utilized **Azure Blob Storage** and **Azure Event Hubs** for real-time data processing and improved application performance.

Client 4: American Airlines

(May 2019 - Dec 2020)

Role: Software Engineer

- Designed and configured **user interfaces** with **Angular**, enhancing user experience with responsive design and intuitive navigation.
- Applied **object-oriented programming (OOP)** principles and utilized Microservices Architecture to develop maintainable and extensible code, facilitating future enhancements.
- Implemented client and server-side validation mechanisms using JavaScript, jQuery, ASP.NET validations, and XML to ensure data integrity and reinforce the authentication system's security.
- **Optimized database** performance by writing and tuning complex queries and stored procedures in **PostgreSQL**, achieving a 30% increase in data retrieval speed.
- Conducted comprehensive testing using **xUnit** and **NUnit** to ensure code quality, including unit tests, integration tests, and functional tests, resulting in a 25% reduction in post-release defects.
- Engineered secure **role-based authentication** and **authorization** mechanisms using **ASP.NET Identity**, adhering to OWASP security standards to protect user data.
- Utilized **Postman** for **API testing**, ensuring accurate and efficient API performance. Leveraged **Ansible** for configuration management and deployment automation, ensuring consistent and efficient deployments.
- Adopted **TFS** to manage code versions and automated **CI/CD** pipelines with **Docker**, and **Maven** and deployed on **AWS**, leveraging services such as EC2 for scalable computing, RDS, and S3 for secure storage of static assets.

EDUCATION

- **Master of Computer Science from Texas Tech University**
