

Sumaja

Java Full Stack Developer

Phone : +1(260)307-2272

E-mail : vsumaja53@gmail.com

Linked IN : [linkedin.com/in/sumaja-p](https://www.linkedin.com/in/sumaja-p)

SUMMARY :

- Experienced Java Full Stack Developer with 8+ years of expertise in designing, developing, and deploying scalable, high-performance web applications using Java, Spring Boot, Angular, and React.js.
- Proficient in Java 8/11+, Spring Framework (Spring Boot, MVC, Security, Cloud), and microservices architecture, delivering modular, secure, and efficient backend solutions.
- Proficient in front-end development with Angular, React.js, JavaScript, TypeScript, HTML5, and CSS3, creating intuitive, responsive, and cross-platform web interfaces. Designed and
- Developed AI-powered web solutions by integrating Large Language Models (LLMs) like OpenAI GPT and Google Gemini with robust Java Spring Boot APIs and Angular-based frontends.
- Implemented smart conversational interfaces in Angular that interact with backend LLM APIs to deliver contextual insights, streamline business interactions, and improve overall usability.
- Implemented Retrieval-Augmented Generation (RAG) pipelines using Spring Boot microservices to connect LLMs with enterprise data sources, enabling accurate, domain-specific AI responses.
- Integrated vector databases (e.g., Pinecone, FAISS, ChromaDB) for semantic search and contextual memory in GenAI-powered Java applications.
- Developed secure RESTful APIs in Spring Boot to manage AI prompt processing, user sessions, and conversation context between Angular front-end and GenAI models.
- Skilled in RESTful API design, OAuth2/JWT authentication, and Swagger/OpenAPI documentation for seamless integration with frontend and third-party systems.
- Hands-on experience with Docker, Kubernetes, and CI/CD pipelines using Jenkins, Maven, and GitHub Actions, ensuring smooth automation and deployment workflows.
- Proficient in SQL and NoSQL databases such as MySQL, PostgreSQL, and MongoDB, optimizing performance with indexing, stored procedures, and Redis caching strategies.
- Experienced in deploying and managing applications on AWS (EC2, S3, Lambda, RDS) and GCP, implementing scalability, fault tolerance, and cost-efficient cloud solutions.
- Adept at real-time data streaming using Kafka and WebSockets and building data visualization dashboards with Chart.js and Highcharts.
- Strong advocate of Agile/Scrum methodologies, TDD (JUnit, Mockito), and SOLID design principles, contributing to maintainable, high-quality codebases.
- Excellent collaborator and mentor, fostering technical excellence and continuous improvement within cross-functional development teams.
- Created custom prompt engineering workflows and templates to enhance response quality and ensure alignment with enterprise compliance and tone.
- Deployed and scaled AI-powered microservices on AWS and Kubernetes, ensuring low-latency inference and cost-efficient performance for production workloads.

TECHNICAL SKILLS :

Programming Languages :	Java 8/11+, Python, JavaScript (ES6+), TypeScript, SQL, HTML5, CSS3
Backend Technologies :	Spring Boot, Spring MVC, Spring Security, Spring Cloud, Hibernate, JPA, Microservices Architecture, RESTful APIs, GraphQL
Frontend Technologies :	Angular (up to v17), React.js, Redux, RxJS, Bootstrap, Material UI, AJAX, JSON
Generative AI	OpenAI GPT Models (GPT-3.5, GPT-4), Google Gemini, LangChain, Hugging Face Transformers, Retrieval-Augmented Generation (RAG).
Databases :	MySQL, PostgreSQL, MongoDB, Cassandra, Oracle, Redis, DynamoDB
Cloud & DevOps:	AWS (EC2, S3, Lambda, RDS), Azure, Google Cloud Platform (GCP), Docker, Kubernetes, Jenkins, Maven, Git, GitHub, GitLab, CI/CD Pipelines
Data Processing & Messaging :	Apache Kafka, RabbitMQ, Spark, REST/JSON APIs, WebSockets
Testing & Quality Assurance:	JUnit, Mockito, Postman, Selenium, Jasmine, Karma, SonarQube, TestNG
Security & Authentication :	JWT, OAuth2, SSO, Role-Based Access Control (RBAC), HTTPS, CORS, OWASP

	Guidelines
Monitoring & Logging :	ELK Stack (Elasticsearch, Logstash, Kibana), Grafana, Prometheus, Splunk
Architecture & Design :	Microservices, Event-Driven Architecture, MVC, MVVM, SOLID Principles, Design Patterns, TDD (Test-Driven Development)
Tools & IDEs :	IntelliJ IDEA, Eclipse, VS Code, Postman, Swagger/OpenAPI, Figma
Project Management & Methodologies:	Agile (Scrum, Kanban), Jira, Confluence, Bitbucket, SDLC

PROFESSIONAL EXPERIENCE :

Well Care | Tampa FL Java Full Stack Developer

Jun 2024 – Present

Responsibilities :

- Designed, developed, and maintained RESTful APIs using Java, Spring Boot, and Hibernate, ensuring high scalability, performance, and availability.
- Architected and implemented microservices to improve modularity, maintainability, and deployment efficiency across enterprise applications.
- Integrated Spring Security with JWT/OAuth2 for secure authentication and authorization, enforcing robust role-based access control.
- Optimized backend performance through multithreading, caching (Redis), and database query tuning to support high-traffic environments.
- Built responsive and interactive front-end interfaces using React.js and Angular, ensuring cross-browser and mobile compatibility.
- Implemented advanced state management using Redux and NgRx for large-scale frontend applications, improving consistency and performance.
- Developed reusable UI components, forms, and data visualizations using JavaScript, HTML5, and CSS3 for dynamic user interactions.
- Collaborated with UX/UI designers to translate prototypes into seamless, user-friendly interfaces aligned with business goals.
- Designed and administered relational databases (MySQL, PostgreSQL, Oracle), including schema modeling, indexing, and performance optimization.
- Implemented NoSQL data solutions with MongoDB and Firebase, enabling flexible data modeling and faster data access.
- Automated CI/CD pipelines with Jenkins, Maven, Git, and Docker to streamline builds, testing, and deployments.
- Developed comprehensive unit and integration tests using JUnit, Mockito, and Selenium, achieving 80%+ code coverage.
- Adhered to clean code principles, SOLID, and design patterns, ensuring maintainability and scalability of software solutions.
- Led end-to-end full-stack development using Java 11, Spring Boot, React.js, and Angular, delivering high-quality, integrated applications.
- Mentored junior developers and facilitated code reviews and documentation to promote best practices and continuous improvement.

Environment : Java 8/11, JavaScript (ES6+), TypeScript, HTML5, CSS3, Spring Boot, Spring MVC, Hibernate/JPA, Spring Security, React.js, Angular, Redux, NgRx, MySQL, PostgreSQL, Oracle, MongoDB, Firebase, RESTful APIs, JSON, JWT, OAuth2.

Homesite Insurance | Boston, MA Sr. Java Developer

Dec 2021 – May 2024

Responsibilities :

- Developed and maintained scalable backend services using Java 8/11, Spring Boot, and Spring MVC to handle high-volume REST API traffic.

- Designed and implemented RESTful APIs and microservices architecture, enabling modularity, maintainability, and seamless integration between distributed systems.
- Implemented secure authentication and authorization using Spring Security, OAuth2, and JWT to enforce enterprise-grade security standards.
- Built responsive and dynamic front-end applications using React.js and Angular, integrating REST APIs and managing complex state with Redux or RxJS.
- Developed reusable UI components, forms, dashboards, and charts using JavaScript, TypeScript, HTML5, CSS3, SASS, Bootstrap, and libraries such as Chart.js, D3.js, and FullCalendar.
- Designed relational database schemas and wrote optimized SQL queries, stored procedures, and views in MySQL, PostgreSQL, and Oracle.
- Worked with event-driven and real-time architectures, integrating Kafka, RabbitMQ, and WebSockets for messaging and streaming use cases.
- Built, containerized, and deployed applications using Docker and Kubernetes for scalable and portable microservice deployments.
- Configured and automated CI/CD pipelines using Jenkins, GitLab CI, Maven, and Gradle to streamline build, test, and deployment workflows.
- Provisioned and managed cloud infrastructure using AWS (EC2, S3, RDS, Lambda), GCP, and Azure, including infrastructure-as-code automation with Terraform.
- Implemented monitoring and alerting using Prometheus, Grafana, and ELK Stack to ensure system health and proactive issue detection.
- Practiced Agile methodologies (Scrum, TDD, BDD), participating in sprint planning, story grooming, daily stand-ups, and retrospectives.
- Developed automated test suites using JUnit 5, Mockito, TestNG, and integrated coverage tracking with SonarQube, maintaining 80%+ test coverage.
- Collaborated with cross-functional teams (UX/UI, QA, DevOps, Product) to deliver high-quality, end-to-end software solutions.
- Led full-stack development of enterprise-grade applications using Java 11, Spring Boot, React.js, and Angular, ensuring performance and seamless user experiences.
- Mentored junior developers, conducted code reviews, and promoted best practices including clean code, SOLID principles, and CI/CD integration.

Environment : Java 8/11, JavaScript (ES6+), TypeScript, HTML5, CSS3, SASS, Spring Boot, Spring MVC, Spring Security, Hibernate/JPA, RESTful APIs, Microservices, React.js, Angular, Redux, RxJS, Bootstrap, Chart.js, D3.js, FullCalendar, MySQL, PostgreSQL, Oracle.

Silicon Valley Bank | Santa Clara, CA
Java Developer

Dec 2018 – Nov 2020

Responsibilities :

- Developed and deployed scalable RESTful microservices using Java 11, Spring Boot, and Docker, improving application scalability and reducing downtime by 30%.
- Migrated legacy monolithic and JSP-based frontends to Angular and React.js, improving maintainability, reducing code complexity, and accelerating development cycles.
- Built dynamic, responsive frontend components with React.js, Angular, and TypeScript, integrating seamlessly with backend APIs and managing state with Redux/RxJS.
- Implemented real-time features such as live chat, notifications, and analytics dashboards using WebSockets, STOMP, Kafka, Chart.js, and Highcharts.
- Integrated event-driven and streaming architectures using Kafka for decoupled communication and real-time data processing across microservices.
- Optimized backend performance by 35–40% through asynchronous processing, caching with Redis, optimized SQL queries, pagination, and lazy loading techniques.
- Designed and implemented secure authentication and authorization with Spring Security, OAuth2, and JWT, enforcing role-based access control (RBAC) at API and UI levels.
- Created and documented RESTful APIs with Swagger/OpenAPI, enabling easy consumption by frontend and third-party services.

- Implemented hybrid data storage solutions using PostgreSQL and MongoDB to efficiently handle structured and unstructured data.
- Automated CI/CD pipelines using Jenkins, GitHub Actions, Maven, Docker, and container orchestration, ensuring consistent deployments across dev, QA, staging, and production.
- Refactored legacy systems into modular microservices using Spring Boot and Docker, improving deployment speed, scalability, and maintainability.
- Integrated third-party APIs (payment gateways, SMS services) securely using REST and OAuth2 protocols, enabling new revenue-generating features.
- Created reusable UI libraries and middleware for frontend and backend layers, streamlining development and enabling logging, auditing, and request tracing.
- Led technical initiatives and mentoring, including architecture reviews, sprint planning, code reviews, and guiding junior developers in best practices.

Environment : Spring Boot, Spring Security, RESTful APIs, Microservices, JWT, OAuth2, Swagger/OpenAPI, Angular, React.js, Redux, RxJS, Chart.js, Highcharts, PostgreSQL, MongoDB, Jenkins, GitHub Actions, Maven, Docker, Kubernetes.

Sonata Software | India
Java Developer

June 2017 – July 2018

Responsibilities :

- Developed and consumed RESTful APIs using Spring MVC and integrated them with frontend applications (React) and third-party services, ensuring seamless communication and scalability.
- Designed and implemented multithreaded and batch-processing services using Spring Batch, reducing task execution time and efficiently processing thousands of records with fault tolerance.
- Built reusable modules with Spring Core, Spring Data JPA, and Hibernate, minimizing code duplication and improving maintainability across services.
- Optimized database performance by tuning SQL queries, creating indexes, and implementing caching strategies with Redis and Hibernate, enhancing throughput and reducing latency.
- Implemented secure authentication and authorization with Spring Security, OAuth2, and JWT, enforcing role-based access control across all endpoints.
- Led backend integration for complex frontend features, defining API contracts, implementing versioning, and ensuring backward compatibility.
- Automated builds and deployments using Maven, Jenkins, and GitLab CI/CD pipelines, enabling reliable, consistent delivery across dev, QA, and production.
- Deployed and monitored Java applications on AWS EC2 and RDS, leveraging CloudWatch and CloudTrail for monitoring, logging, and alerting.
- Refactored legacy codebases to adopt modern design patterns (Singleton, DAO, Factory) and Java 8 features (Streams, Lambdas, Optionals), improving readability, maintainability, and performance.
- Integrated event-driven and asynchronous architectures using Apache Kafka, enhancing decoupling and responsiveness between microservices.
- Created internal tools and scripts using Java and Shell scripting for automation, monitoring, and operational efficiency.
- Containerized applications with Docker and configured deployments in Kubernetes, enabling scalable and portable microservice environments.
- Implemented robust logging and exception handling using Logback and SLF4J, ensuring traceability and faster troubleshooting in production.
- Integrated SOAP-based web services using JAX-WS to support enterprise legacy systems and maintain interoperability.
- Collaborated in Agile/Scrum teams, participating in sprint planning, grooming, retrospectives, and code reviews, consistently delivering features with high quality.

Environment : Java 8/11, JavaScript (ES6+), Shell Scripting, HTML5, CSS3, Spring MVC, Spring Boot, Spring Core, Spring Data JPA, Spring Batch, Hibernate, RESTful APIs, SOAP (JAX-WS), OAuth2, JWT, Spring Security, Jenkins, GitLab CI/CD, Maven, Docker, Kubernetes.
