PROFILE SUMMARY

Dynamic and results-driven Java Developer with over 3+ years of experience in building high-performance, scalable web applications, **microservices**, and **RESTful APIs**. Expertise in Java, Spring Boot, SQL, and cloud platforms like AWS and Azure. Strong background in designing robust, secure, and efficient back-end systems that drive business solutions across various domains, including **Financial Services**, **E-commerce**, and Enterprise applications. Proven track record in optimizing application performance, reducing operational costs, and streamlining workflows through automation and cloud-native architectures. Adept at collaborating within Agile teams to deliver innovative, scalable, and maintainable software solutions. Passionate about writing clean, efficient code while maintaining a focus on high availability, security, and **scalability**.

WORK EXPERIENCE

Cigna Insurance, *Real-Time Data Processing and Fraud Detection System* **Java Developer**

Aug 2023 – Present
Dallas, Texas

- Developed **scalable** and high-performing back-end services using **Java**, **Spring Boot**, and **Quarkus**, supporting critical enterprise applications in cloud environments.
- Designed and implemented RESTful APIs and **GraphQL** endpoints for real-time data processing, improving response times by **25%** and ensuring seamless communication between microservices.
- Deployed applications to **Google Cloud Platform (GCP)**, using App Engine, Cloud Functions, and **Anthos**, ensuring auto-scaling and high availability.
- Utilized Google Cloud Storage and **BigQuery** for secure and efficient data storage, reducing access latency by 30% through optimized data retrieval processes.
- Automated **CI/CD** workflows using Jenkins, GCP Cloud Build, and **GitHub Actions**, streamlining deployment pipelines and reducing manual intervention by 40%.
- Containerized microservices using **Docker** and **Podman**, improving deployment efficiency and ensuring consistency across development, testing, and production environments.
- Utilized Cloud SQL, Firestore, and **Spanner** to design and optimize databases, ensuring high transaction throughput and low-latency queries.
- Leveraged **Google Kubernetes Engine (GKE)** and **Istio** for container orchestration and service mesh, ensuring auto-scaling, high availability, and secure communication between microservices.
- Integrated Cloud Pub/Sub and **Apache Kafka** for event-driven architecture, enhancing the responsiveness and scalability of backend services.
- Configured Google Secret Manager and **HashiCorp Vault** to securely manage sensitive data and API credentials, ensuring compliance with industry standards.
- Implemented asynchronous message processing using Google Cloud Tasks and **Celery**, reducing load on backend services and enhancing system reliability.
- Conducted API testing using Postman and integrated **JUnit**, **Mockito**, and **Cypress** for unit, integration, and end-to-end tests, ensuring API stability and performance.
- Deployed and monitored applications using GCP Monitoring, Stackdriver, and **Dynatrace**, providing actionable insights into application health and system performance.
- Developed user-friendly, responsive interfaces using **React.js**, **Angular**, and **Tailwind CSS**, increasing user engagement by **20%**.
- Collaborated with the team to design a robust logging and monitoring solution with ELK Stack (**Elasticsearch**, **Logstash**, Kibana) and **Fluentd** for centralized log management.
- Used **Git** and **GitLab** for version control, enabling effective collaboration across teams and improving code quality through regular code reviews.
- Integrated **OAuth 2.0**, **OpenID Connect**, and JWT for secure user authentication and stateless user sessions, ensuring data security and seamless user experience.
- Contributed to the migration of legacy applications to cloud-native solutions on GCP, leveraging **microservices architecture** to reduce infrastructure costs by **30%** and improve scalability.
- Designed serverless workflows using GCP Workflows and **Apache Airflow**, orchestrating tasks across multiple cloud services and enhancing automation while reducing manual intervention.

- Optimized network architecture using Cloud Load Balancing, Cloud **CDN**, and **Cloud Armor**, improving application performance and reducing latency for global user access.
- Engaged in troubleshooting and debugging using **GDB** and **Jaeger**, ensuring minimal production downtime and fast resolution of critical production issues.
- Delivered solutions in an **Agile environment**, collaborating with product owners and cross-functional teams to meet business requirements and deadlines.

Shopify , Automated Loan Approval Workflow with AWS Integration
Java Developer

Jan 2021 – Dec 2022
Hyderabad, India

- Designed and developed a cloud-native inventory management system using **Java**, **Spring Boot**, and **Quarkus**, deployed on **Azure App Services**, ensuring 99.9% uptime and reducing operational costs by 20%.
- Automated **CI/CD** pipelines with Jenkins, Azure DevOps, and **GitHub Actions**, achieving a 40% reduction in deployment times while maintaining build quality.
- Implemented containerization and orchestration for enterprise-grade applications using **Docker** and **Azure Kubernetes Service** (AKS), improving scalability and portability across environments.
- Integrated **Azure Blob Storage** and **Data Lake Storage** for secure and efficient handling of large-scale data backups, ensuring data durability and reducing recovery time by 50%.
- Utilized **Azure Key Vault** and **HashiCorp Vault** to securely manage sensitive configurations and secrets, enhancing overall application security.
- Developed robust logging and monitoring capabilities with Elastic Stack (ELK), **Fluentd**, and Azure Monitor, reducing debugging time by 30%.
- Built and optimized **Azure SQL Database** and SQL Server databases to handle high transaction volumes, improving query performance by **35%**.
- Orchestrated **microservices** using Kubernetes and **Istio** service mesh to ensure scalability, fault tolerance, and secure communication for enterprise applications.
- Integrated Azure Service Bus and **Event Grid** for asynchronous communication between applications, improving transaction reliability by 25%.
- Developed a predictive maintenance tool for hardware components using **Azure Machine Learning** and **OpenAI API**, reducing **downtime** by 15%.
- Deployed **Azure Application Insights** and **Dynatrace** for real-time performance monitoring, leading to proactive issue resolution and improved system reliability.
- Conducted end-to-end performance testing with Postman and load testing with Apache **JMeter** and **K6**, ensuring high reliability during peak usage.
- Migrated legacy HR systems to a modern cloud-based architecture using **Azure Functions** and **Serverless Framework**, reducing maintenance overhead by 40%.
- Enhanced application security by implementing JWT-based authentication and **OAuth 2.0** for user authorization workflows.
- Optimized API response times by 20% through caching techniques using **Redis** and **Azure Cache for Redis**.
- Developed a real-time dashboard for business operations using **React.js**, **Angular**, and **Tailwind CSS**, improving decision-making efficiency.
- Spearheaded the use of **SonarQube** and **Checkmarx** for code quality and security analysis, improving adherence to development standards.
- Collaborated with cross-functional teams in an Agile environment to deliver high-impact enterprise solutions aligned with **HP's** global business objectives.

PROJECTS

Just Grab - Food Delivery Application | *HTML, CSS, JavaScript, MongoDB, React.js, GitHub* May 2023 – Dec 2023

- Designed and developed a food delivery application utilizing the MERN stack.
- Built intuitive interfaces for browsing restaurant menus, placing orders, and tracking deliveries, ensuring an excellent user experience. Developed backend services using Node.js and Express.js for efficient handling of user requests and data.
- Implemented frontend components with React.js to enhance interactivity and responsiveness. Utilized MongoDB for dynamic data storage, enabling fast and efficient data access.

TECHNICAL SKILLS

Web Development : React, Angular, Node.js, Express.js, Redux, Jest, Bootstrap, JSON, REST, Swagger

Programming Languages & Frameworks: C, Java, Python, C#, JavaScript(ES6+), TypeScript, jQuery, HTML5, CSS, SCSS, Spring, Spring Boot, Hibernate

Developer Tools & Databases: Git, Bitbucket, GitHub, Postman, Splunk, Fiddler, VS Code, Visual Studio, IntelliJ, Eclipse, AWS, Jira, Maven, Apache Tomcat, Xcode, Tableau, Docker, Kubernetes, Kafka, MySQL, MongoDB, PostgreSQL

Methodologies: DevOps, Scrum, Agile, Software Testing

EDUCATION

University of Central Missouri

Lee's Summit, MO

Master's in Computer Science

CERTIFICATIONS

Google Cloud Platform - GCP

March, 2024

AZ-900 : Azure Fundamentals

May'22
