PROFESSIONAL SUMMARY

- Backend Developer skilled in building scalable APIs and automation tools using Python, Java, and C#.
- Adept at optimizing backend logic, improving performance, and ensuring secure data handling.

WORK EXPERIENCE

Eastern Kentucky University Graduate Assistant Programmer

January 2024 - May 2025

- Assisted in backend integration for academic dashboards and data pipelines.
- Expert in debugging, enhancing code efficiency by 25% on average.
- Debugged and optimized data handling logic, enhancing reliability and reducing latency.
- Supported professors and researchers by building reusable Python scripts for backend automation.

Carelon Global Solutions Junior Developer

January 2023 - December 2023

- Developed and deployed RESTful APIs for internal tools using Python and Flask.
- Reduced system downtime by 25% through proactive monitoring and alerting systems.
- Leveraged AWS services (EC2, S3) to ensure secure deployment and scalability.

EDUCATION

Masters in Computer Science - (GPA: 4.0/4.0) Eastern Kentucky University

January 2024 - May 2025

- **Focus Areas:** AI for Data Science, Machine Learning, Big Data Technologies, Database Systems, Algorithms, and Data Visualization.

Bachelors Degree in Computer Science - (GPA: 3.72/4.0) Parul University

June 2019 - May 2023

- **Core Skills:** Data Structures & Algorithms, Object-Oriented Programming, Computer Architecture, Software Development Principles, Cryptography, and Data Mining.

TECHNICAL SKILLS

- **Backend Development:** Python, Java, Node.js, C#
- **Frontend Development:** HTML, CSS, JavaScript
- **Databases:** MySQL, HeidiSQL, MongoDB
- **Web Technologies:** REST APIs, JSON, Express.js, Flask
- **Cloud & Tools:** Git, Postman, VS Code, AWS(EC2, S3)

PROJECTS

Crop Disease Detection and Recommendation System:

- Developed a Flask-based backend to serve ML model predictions for crop recommendations.
- Handled user data, soil parameters, and weather inputs securely through API endpoints.
- Optimized model performance and reduced response latency by 40%.

Strategic Employee Turnover Prediction System:

- Designed a backend service to predict employee churn using Random Forest and Logistic Regression.
- Processed HR datasets and exposed endpoints for predictions and reporting.
- Built backend logic for KPI tracking and data-driven decision support.

Diabetes Prediction API:

- Created a RESTful API in Python for diabetes risk assessment using health metrics.
- Integrated models like KNN and SVM with a unified API endpoint.
- Documented and tested all endpoints using Postman.

ATM Machine System:

- Designed an ATM software system in C# to support key banking operations like withdrawal, deposit, transfer, and balance inquiry.
- Integrated HeidiSQL for secure account management and enforced transaction limits based on bank policies.
