

Sumanth Sadala

Apex, NC, USA | +1 (919)-893-3892 | sadalasumanth0521@gmail.com | [LinkedIn](#)

PROFESSIONAL SUMMARY

- Deliver scalable, cloud-native backend systems using **Go, Java, and AWS** by applying **4 years of experience** to build high-performance, low-latency applications supporting enterprise-level workloads.
- Architect **microservices** and **API-driven platforms** using **Gin, Go Kit, and Gorilla Mux**, and **Java Spring Boot**, integrating JSON/YAML-based configurations to support distributed enterprise systems.
- Engineer event-driven **Kafka** workflows by implementing producers, consumers, partitions, and schema design to support high-throughput, low-latency data processing across backend services.
- Optimize system performance using **Go concurrency primitives (Goroutines, Channels, and WaitGroups)**, enabling efficient parallel execution and stable behavior under peak production traffic.
- Enhance internal dashboards and engineering tools by developing **React and TypeScript** components integrated with backend APIs, increasing operational visibility and team efficiency.
- Improve database performance by writing complex SQL queries, modeling schemas, tuning indexes, and optimizing **PostgreSQL** and **MySQL** operations for large-scale transactional workloads.
- Deploy cloud-native microservices using **AWS EKS, Lambda, API Gateway, RDS, and S3** while leveraging **Docker, Kubernetes, and Helm** to maintain resilient, scalable, high-availability production environments.
- Automate end-to-end **CI/CD** pipelines using **GitHub Actions** and **Jenkins** to streamline builds, testing, and deployments, increasing release consistency and significantly reducing manual engineering effort.
- Implement secure authentication and authorization models using **OAuth2, JWT, RBAC, IAM, and TLS** while standardizing API practices through detailed Swagger/OpenAPI specifications and documentation.
- Collaborate within **Agile/Scrum teams**, partnering with frontend, backend, QA, and product stakeholders to deliver end-to-end solutions while contributing to sprint planning, reviews, and technical decisions.

TECHNICAL SKILLS

Languages	Go, Java, JavaScript/TypeScript, SQL, Python
Backend & Frameworks	Gin, Gorilla Mux, Go Kit, GORM, gRPC, Spring Boot, Go Concurrency (Goroutines, Channels, WaitGroups)
Web & API Development	RESTful APIs, GraphQL, Swagger/OpenAPI
Frontend	React, Angular, HTML5, CSS3, Bootstrap, JSON, YAML
Cloud & DevOps	AWS (Lambda, ECS/EKS, API Gateway, S3, RDS, EC2), Docker, Kubernetes, Terraform (IaC), Helm, GitHub Actions, Jenkins, CI/CD
Databases	PostgreSQL, MySQL, SQL Server, MongoDB, Cassandra, DynamoDB, Oracle
Streaming & Messaging	Apache Kafka (schemas/partitions/retries), RabbitMQ
Monitoring & Logging	Prometheus, Grafana, ELK Stack (Elasticsearch, Logstash, Kibana), CloudWatch
Security & Compliance	JWT, OAuth2, RBAC, IAM, TLS
Testing Frameworks	GoTest, GoMock, Testify, Ginkgo, Selenium, JUnit, Mockito, Cucumber, Postman, Insomnia
Tools & Methodologies	Git, Agile/Scrum, JIRA, Confluence, Visual Studio

PROFESSIONAL EXPERIENCE

Backend Software Engineer (Go) | Optum | Remote, USA

Jan 2024 – Present

Responsibilities:

- Develop scalable **Go microservices** for claims and eligibility workflows using **Gin, Go Kit, and GORM**, supporting high-volume production systems used across healthcare platforms.
- Implement real-time **Kafka** pipelines by designing producers, consumers, partitions, and event schemas to support low-latency data processing and synchronization across distributed services.

- Support backend services handling 100K+ API requests per day, maintaining low latency and stability during peak healthcare enrollment periods.
- Enhance backend performance by applying **Go concurrency primitives**, boosting throughput and stability during peak enrollment and claims processing periods.
- Optimize **PostgreSQL** schemas and queries, reducing average query execution times by **30-40%** for transactional workloads.
- Deploy cloud-native services using **AWS EKS, Lambda, API Gateway, RDS, and S3**, ensuring high availability and fault tolerance in production environments.
- Automate **CI/CD** pipelines using **GitHub Actions** and **Jenkins**, cutting deployment cycles from hours to under 15 minutes across environments.
- Enhance internal tools by building **React components** and integrating backend APIs to improve dashboard functionality, visibility, and workflow efficiency for engineering teams.
- Strengthen application security by implementing **OAuth2, JWT, RBAC, IAM, and TLS**, ensuring HIPAA-compliant service-to-service communication and secure data access.
- Monitor production workloads using **Prometheus, Grafana, ELK, and CloudWatch** to improve observability and reduce mean-time-to-resolution during operational incidents.
- Reduce production incidents by **25-30%** through improved error handling, retry strategies, and enhanced monitoring across distributed microservices.

Environment: Go, Gin, Go Kit, Gorilla Mux, GORM, Postman, Kafka, RabbitMQ, PostgreSQL, DynamoDB, AWS (Lambda, EKS, API Gateway, S3, RDS), Docker, Kubernetes, Jenkins, GitHub Actions, Prometheus, Grafana, ELK, Agile/Scrum

Backend Software Engineer (Java, Go) | Wipro | Hyderabad, India

Jul 2021 – Jul 2023

Responsibilities:

- Develop backend services using **Java Spring Boot** and later migrate core components to **Go microservices**, improving scalability, modularity, and system performance across telecom platforms.
- Participate in the migration of **5+** legacy services from monolithic Java applications to containerized Go microservices, developing deployment flexibility and scalability.
- Build **REST** and **gRPC** APIs using **Gorilla Mux, Go Kit, and Spring Boot** to enable seamless integration between backend services, frontend applications, and partner systems.
- Improve API response times by **20-30%** through optimized request handling, database access patterns, and performance tuning.
- Create streaming pipelines using Go and **Kafka** to replace legacy batch processes, reducing reporting time from several hours to near real-time execution.
- Containerize backend services using **Docker** and deploy them on **Kubernetes clusters**, improving deployment consistency and enabling faster environment provisioning.
- Optimize database performance across **PostgreSQL, MySQL, and Cassandra** by refining schemas, tuning indexes, and writing efficient SQL and NoSQL queries.
- Collaborate with frontend teams (**React/Angular**) to integrate backend APIs into customer-facing dashboards and operational tools, improving data accessibility and user workflows.
- Document API contracts using **Swagger/OpenAPI** to standardize communication patterns and reduce onboarding and integration issues across teams.
- Support Agile/Scrum ceremonies by participating in planning, grooming, demos, and retrospectives, contributing to iterative delivery and cross-team collaboration.

Environment: Go, Java, Spring Boot, REST, gRPC, Kafka, RabbitMQ, PostgreSQL, MySQL, MongoDB, Cassandra, Docker, Kubernetes, Jenkins, Git, Swagger/OpenAPI, React/Angular Integration

EDUCATION

Master of Science in Data Science, University at Buffalo, The State University of New York | GPA: 3.33 / 4.0
