

Sumedh Devaki | Data Analyst

Chicago, IL | +1 (773) 885 3825 | [Email](#) | [LinkedIn](#) | [GitHub](#)

PROFESSIONAL SUMMARY

Data Analyst with 3+ years of experience delivering business insights through data analysis, reporting, and visualization across telecom, IT, and consulting industries. Proficient in Python, SQL, Power BI, Tableau, and Excel, with a strong background in data cleaning, preprocessing, and validation to ensure accuracy and reliability of reporting. Skilled in conducting exploratory analysis, hypothesis testing, and A/B testing to identify actionable trends and support strategic decisions. Experienced in building automated dashboards, streamlining reporting workflows, and collaborating with cross-functional teams using agile methodologies, GitHub, and Jira. Recognized for improving operational efficiency, enhancing customer segmentation, and enabling data-driven decision-making through clear, stakeholder-focused reporting.

TECHNICAL SKILLS

Programming & Query Languages: Python, SQL

Data Cleaning & Manipulation: Data wrangling, missing value imputation, outlier treatment, data normalization, schema validation

Data Analysis: Exploratory Data Analysis (EDA), Hypothesis Testing, A/B Testing, Regression, Time Series Analysis

Data Visualization & Reporting: Tableau, Power BI, Microsoft Excel, Matplotlib, Seaborn, Plotly

Databases: MySQL, PostgreSQL

Collaboration & Workflow Tools: Jupyter Notebook, Google Colab, Git, Jira, Azure Data Studio, Anaconda

Project & Workflow Management: Agile methodologies, version control, requirement gathering, stakeholder reporting

WORK EXPERIENCE

VSP GLOBAL, IL, USA Jan 2025 - Current
Data Analyst

- Improved operational forecast accuracy by 24% by analyzing business datasets in Python and delivering validated insights through recurring evaluation cycles.
- Streamlined data preparation and quality checks by applying outlier treatment, normalization, and validation rules, reducing errors in reporting pipelines by 35%.
- Conducted hypothesis testing and A/B analysis on pilot programs, increasing actionable insights by 42%, and presented findings through detailed Tableau dashboards and executive summaries.
- Built automated reports and dashboards using Power BI, Plotly, and Seaborn, reducing manual review cycles by 18% and ensuring consistency across quarterly updates.
- Coordinated data-driven workflows with cross-functional teams, leveraging GitHub, Jira, and Azure Data Studio to improve sprint velocity by 27% and enhance stakeholder reporting efficiency.

Wipro, India Jul 2021 - Jul 2023
Data Analyst

- Enhanced customer segmentation by analyzing behavioral and demographic data, leading to a 17% increase in targeted email campaign performance across four regions.
- Automated data cleaning and preprocessing workflows, reducing preparation time by 33% for 10+ recurring data processes.
- Developed interactive Power BI dashboards using DAX and row-level filters, improving KPI visibility and shortening reporting cycles by 21% for operations and product teams.
- Ensured data quality and consistency across large datasets by implementing validation checks, improving reliability of business insights.
- Delivered executive-ready Excel reports and visualization templates, cutting redundant report requests by 26% and enabling faster, data-driven decisions.

Cognizant, India Jun 2020 - Jun 2021
Data Analyst

- Conducted exploratory data analysis (EDA) on customer retention data in PostgreSQL and MySQL, uncovering key trends that improved retention rates by 14% in two quarters.
- Built automated reporting solutions in Excel, Matplotlib, and Seaborn, reducing reporting turnaround time by 3 business days for three cross-functional teams.
- Cleaned and standardized 100K+ records by applying missing value treatment, normalization, and schema checks, ensuring accuracy of analytics deliverables.
- Created visual performance summaries and weekly updates, simplifying complex datasets into actionable insights for non-technical stakeholders.
- Supported team collaboration by maintaining version-controlled documentation and analysis workflows, ensuring transparency and efficiency across research projects.

EDUCATION

Master in Computer Science Aug 23-May 25
Illinois Institute of Technology

Bachelor of Technology in Information Technology Jun 17-July 21
Sree Vidyanikethan Engineering College, India

PROJECTS

IBM Data Analyst Capstone Project | Python, Pandas, NumPy, Matplotlib, Jupyter

- Processed 100K+ data entries using Python workflows, improving data clarity and trend discovery by 22%, and ensuring the dataset was fully cleaned, structured, and ready for business analysis.
- Presented analytical outcomes with Matplotlib visuals and markdown summaries, reducing stakeholder review time by 30% and boosting comprehension of consumer patterns during simulation-based decision sessions.

Aerial Obstacle Detection for Visually Impaired | Python, TensorFlow, Arduino IDE, Anaconda, Git

- Programmed a sensor-driven detection tool that recognized obstacles with 93% precision across 40+ trial paths, aiding safe mobility for users in both cluttered indoor and uneven outdoor environments.
- Combined ultrasonic sensors with a TensorFlow model for depth detection, trimming recognition lag by 17% and elevating real-time feedback consistency under shifting ambient noise and lighting.
